RE: Docket HP09-001 to Construct the Keystone XL Pipeline

Date 10/12/14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com, May 26, 2014*

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

Tiah Holt

As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

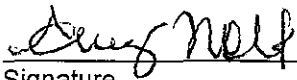

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

Aubrey Walters

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

Date 10/12/14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com, May 26, 2014*

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

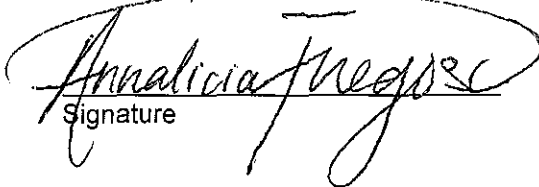

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," - *Earthfirstjournal.com, May 26, 2014*

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

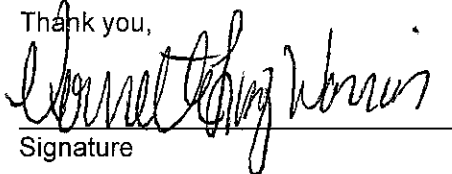

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

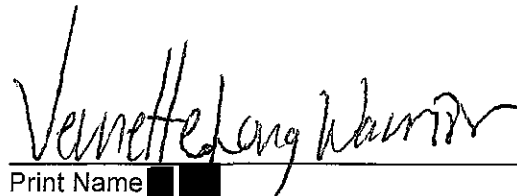

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

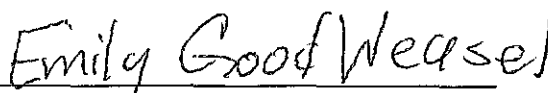

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

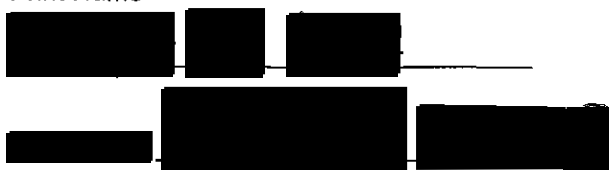

Thank you,

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

Date 12 Oct 14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com*, May 26, 2014

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com*, May 26, 2014

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

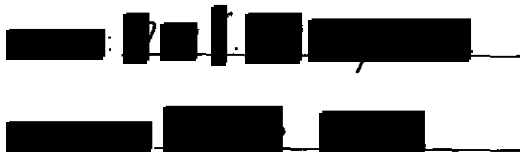

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

Date 10/12/2014

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com*, May 26, 2014

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

Date 10-12-14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com*, May 26, 2014

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. Date 10-12-14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com*, May 26, 2014

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

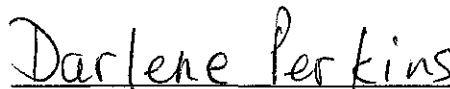

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

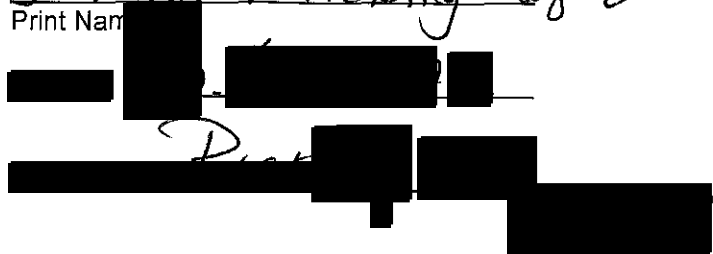

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

Date 10 12 14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," - *Earthfirstjournal.com, May 26, 2014*

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

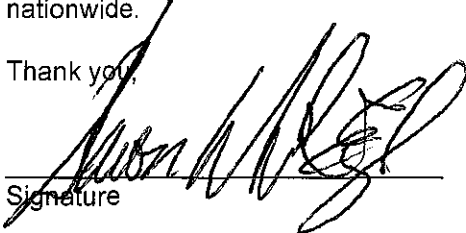

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com*, May 26, 2014

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

Date 10-12-14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," - *Earthfirstjournal.com*, May 26, 2014

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

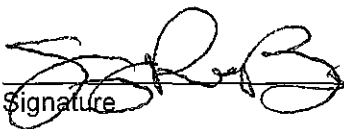

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

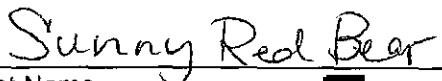

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

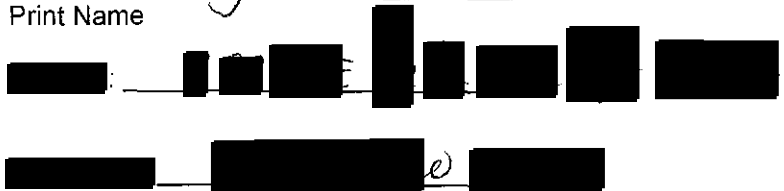

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

Signature

TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

Date 10/12/14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com, May 26, 2014*

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com, May 26, 2014*

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

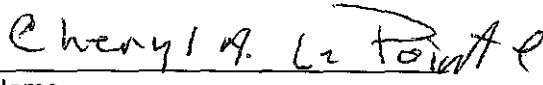

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

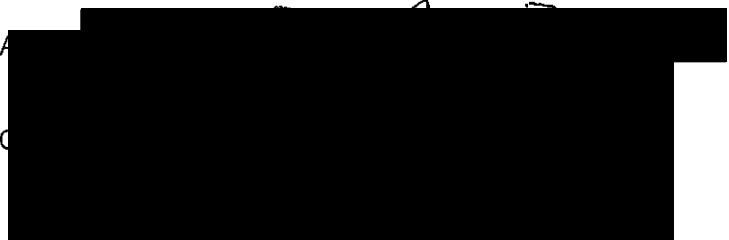

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

Date 10-12-14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," - *Earthfirstjournal.com, May 26, 2014*

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

HP14

Date 10-13-14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com, May 26, 2014*

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

Date 10/13/14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com*, May 26, 2014

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

HP 14

Date 10/13/14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," - *Earthfirstjournal.com, May 26, 2014*

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

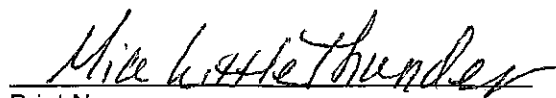

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

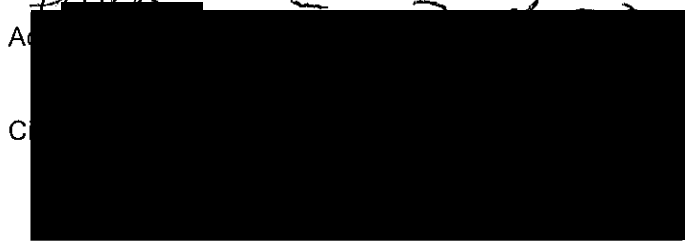

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

HP 14

Date 10/13/14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer, including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com, May 26, 2014*

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. RE: Docket HP09-001 to Construct the Keystone XL Pipeline

HP14

Date 10-13-14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," - *Earthfirstjournal.com, May 26, 2014*

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

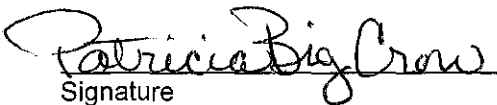

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

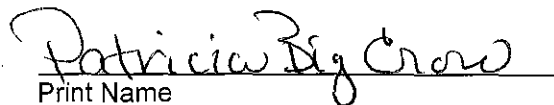

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," - *Earthfirstjournal.com, May 26, 2014*

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

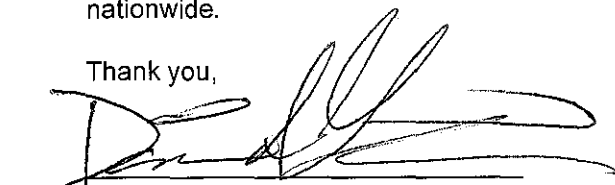

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

HP 14

Date _____

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com, May 26, 2014*

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

Date

10-11-2014

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com, May 26, 2014*

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

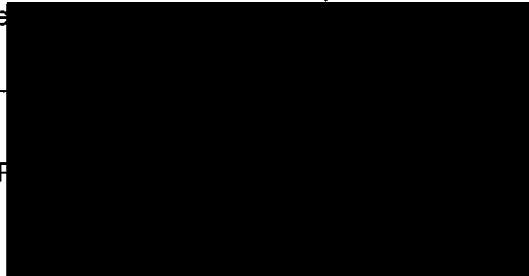

Thank you,

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

Date 10-10-14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com*, May 26, 2014

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," - *Earthfirstjournal.com, May 26, 2014*

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

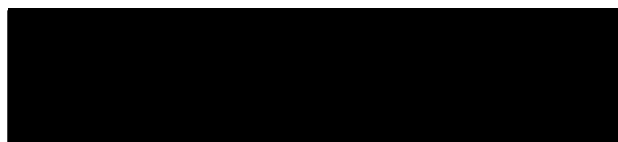

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

SB White

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.

I unite with the hundreds-of-thousands of Americans fighting for Climate Change and I say NO KEYSTONE XL PIPELINE crossing Treaty Territory and the State of South Dakota.

I urge you and the U.S. Government to put forth more incentives for renewable energy and develop jobs nationwide.

Thank you,

UTILITIES COMMISSION

RE: Docket HP09-001 to Construct the Keystone XL Pipeline

Date 10-16-14

To South Dakota Public Utilities Commission:

The Keystone XL Pipeline is NOT in the Best Interest of South Dakota or our Nation.

I say **NO** to the construction of the TransCanada Keystone XL Pipeline through South Dakota and the Nation for the following reasons:

The Keystone XL Pipeline will be detrimental to not only our environment and the ecosystems in the direct construction path, but also the people along this route will suffer; including men, women and children as a result of the proposed Man Camps. Statistics prove that these makeshift 'Man' camps in oil-boom towns are notorious for sex trafficking and rape increases, drug and alcohol abuse, as well as other major crimes have skyrocketed. "Sexual assaults on the male population has increased by 75% in that area (Bakken man camps)," – *Earthfirstjournal.com*, May 26, 2014

Another major concern is for our fresh water resources; rivers, creeks, stock-dams, underground springs and wells, aquifers, including the Ogallala Aquifer, are in imminent danger of a catastrophic water contamination when the TransCanada Keystone XL Pipeline breaks. TransCanada's plans are to go four-feet under the many rivers and creeks they will need to cross through South Dakota. As you know we do have major riverbank erosion that will compromise the pipeline and IT will break. The Tar Sands sludge called bitumen is highly toxic. Water is SACRED and we have to protect water.

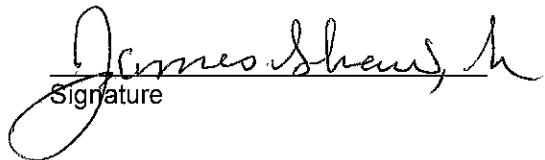

Also, the U.S. State Department has acknowledged that the TransCanada Keystone XL tar sands pipeline will accelerate climate change and will drive significantly more global warming pollution and more climate chaos.

Furthermore, I support the 1851 Fort Laramie Treaty that protects Treaty Lands from U.S. Government violation through 'Article VI of the United States Constitution' that states "Treaties made with Indian Nations shall be the supreme law of the land, with the judges in every state bound thereby". And I believe that TransCanada, the State of South Dakota and the U.S. Government agencies have not done a full, efficient "Tribal Consultation" of Tribal historical and/or sacred sites in the path of this pipeline.
