Subject: Docket HP14-002 Dakota Access
Auto forwarded by a Rule

Dear PUC,

I wish to voice my concerns over the proposed Dakota Access Line. I am concerned that the environmental consequences down the road will be disastrous. Usually a pipeline of any kind doesn't have any problems the first 20 to 30 years. But as we all know, mechanical and physical things will corrode in time. (Including us) :) Things break down and wear out. Just look at your car of 20 years. It's not a matter of if, it's a matter of time. Even the best monitoring can't catch all leaks and it seems like we need to look at the long term picture. I ask that this Access line be denied. South Dakota carries a lot of risk and will pay the consequences. Do you realize that our drinking water that is available to us through streams, wells and rivers is less than .08%, the rest is ocean water? The land and water supply is at risk, especially going over the James, Sioux, Missouri, Mississippi and several other rivers in Iowa. Please deny this pipeline of oil and potential other hazardous liquids to protect our land, state, future and ultimately our children and grandchildren's future.

Thanks you,

Nancy Cutshall
