:

Indicate the maximum gross and maximum net electric power production capacity of the facility at t delivery by completing the worksheet below. Respond to all items. If any of the parasitic loads and/ lines 7b through 7e are negligible, enter zero for those lines. 7a The maximum gross power production capacity at the terminals of the individual generator(s) under the most favorable anticipated design conditions	he point(s) of or losses identified in
7a The maximum gross power production capacity at the terminals of the individual generator(s) under the most favorable anticipated design conditions	
	1,550 kW
7b Parasitic station power used at the facility to run equipment which is necessary and integral to the power production process (boiler feed pumps, fans/blowers, office or maintenance buildings directly related to the operation of the power generating facility, etc.). If this facility includes non-power production processes (for instance, power consumed by a cogeneration facility's thermal host), do not include any power consumed by the non-power production activities in your reported parasitic station power.	10 KW
7c Electrical losses in interconnection transformers	30 kW
7d Electrical losses in AC/DC conversion equipment, if any	0 kW
7e Other interconnection losses in power lines or facilities (other than transformers and AC/DC conversion equipment) between the terminals of the generator(s) and the point of interconnection with the utility	10 kW
7f Total deductions from gross power production capacity = 7b + 7c + 7d + 7e	50.0 kW
7g Maximum net power production capacity = 7a - 7f	1,300.0 kW
 used in the facility. Descriptions of components should include (as applicable) specifications of capacities for mechanical output, electrical output, or steam generation of the identified equipm of equipment identified, clearly indicate how many pleces of that type of equipment are include which components are normally operating or normally in standby mode. Provide a description components operate as a system. Applicants for cogeneration facilities do not need to describe systems that are clearly depicted on and easily understandable from a cogeneration facility's att heat balance diagram; however, such applicants should provide any necessary description need the sequential operation of the facility depicted in their mass and heat balance diagram. If addit needed, continue in the Miscellaneous section starting on page 19. The facility involves the installation and operation of wind energy featuring seven GE model 1.5 SLE wind turbine generators with a name capacity of 1.5 MW each and an aggregate name-plate capacity of 10.1 (10, 500kW). Each wind turbine has a hub height of 262 feet and a ro of 252 feet. Each turbine has a height of 389 feet with a blade in position. The towers are constructed of tubular steel, approximate. diameter at the base, with internal joint flanges. The color of the rotors is standard white or off-white. Each wind turbine is connection service road for access and a 34.5-kilovolt (kV) underground electric collector substation, where voltage is increased for interconnection western Area Power Administration's transmission system. Approximating is increased for interconnection is connection and maintenance of the turbines. A fiberoptic communic is co-located with the collector system in most areas. 	the nominal nent. For each piece of in the plant, and of how the operations of ached mass and ed to understand tional space is facility eplate 5 MW botor diameter in the vertical by 15 feet in to the vertical ical itral in to the tely five the bation system

Information Required for Small Power Production Facility

If you indicated in line 1k that you are seeking qualifying small power production facility status for your facility, then you must respond to the items on this page. Otherwise, skip page 10.

		ursuant to 18 C.F.R. § 292.204(a), the power production capacity of any small power production facility, together with the power production capacity of any other small power production facilities that use the same energy esource, are owned by the same person(s) or its affiliates, and are located at the same site, may not exceed 80 negawatts. To demonstrate compliance with this size limitation, or to demonstrate that your facility is exempt from this size limitation under the Solar, Wind, Waste, and Geothermal Power Production Incentives Act of 1990 Pub. L. 101-575, 104 Stat. 2834 (1990) <i>as amended by</i> Pub. L. 102-46, 105 Stat. 249 (1991)), respond to lines 8a hrough 8e below (as applicable).
		a Identify any facilities with electrical generating equipment located within 1 mile of the electrical generating quipment of the instant facility, and for which any of the entities Identified in lines 5a or 5b, or their affiliates, holds t least a 5 percent equity interest.
ñ		heck here if no such facilities exist. 🔀

Information Required for Cogeneration Facility

If you indicated in line 1k that you are seeking qualifying cogeneration facility status for your facility, then you must respond to the items on pages 11 through 13. Otherwise, skip pages 11 through 13.

		Pursuant to 18 C.F.R. § 29 energy (such as heat or s use of energy. Pursuant cycle cogeneration facilit thermal application or pr 292.205(a); or (2) for a bo application or process fo	92.202(c), a cogeneration facility produces electric energy and forms of useful thermal team) used for industrial, commercial, heating, or cooling purposes, through the sequential to 18 C.F.R. § 292.202(s), "sequential use" of energy means the following: (1) for a topping- ty, the use of reject heat from a power production process in sufficient amounts in a rocess to conform to the requirements of the operating standard contained in 18 C.F.R. § totoming-cycle cogeneration facility, the use of at least some reject heat from a thermal rower production.	6
		10a What type(s) of cog	eneration technology does the facility represent? (check all that apply)	Ø
		Topping-cycle	cogeneration Bottoming-cycle cogeneration	
		10b To help demonstrat other requirements balance diagram de meet certain requir below to certify tha	te the sequential operation of the cogeneration process, and to support compliance with such as the operating and efficiency standards, include with your filing a mass and heat epicting average annual operating conditions. This diagram must include certain items and ements, as described below. You must check next to the description of each requirement it you have complied with these requirements.	
		Check to certify compliance with	Pagultoment	
		andicated requirement	Discrem must show estantation within sustan piping and/or ducts of all prime movers	
ration	-		heat recovery steam generators, boilers, electric generators, and condensers (as applicable), as well as any other primary equipment relevant to the cogeneration process.	
gene	atior		Any average annual values required to be reported in lines 10b, 12a, 13a, 13b, 13d, 13f, 14a, 15b, 15d and/or 15f must be computed over the anticipated hours of operation.	
eral Co	Inform		Diagram must specify all fuel inputs by fuel type and average annual rate in Btu/h. Fuel for supplementary firing should be specified separately and clearly labeled. All specifications of fuel inputs should use lower heating values.	
ene			Diagram must specify average gross electric output in kW or MW for each generator.	
ט			Diagram must specify average mechanical output (that is, any mechanical energy taken off of the shaft of the prime movers for purposes not directly related to electric power generation) in horsepower, if any. Typically, a cogeneration facility has no mechanical output.	
			At each point for which working fluid flow conditions are required to be specified (see below), such flow condition data must include mass flow rate (in lb/h or kg/s), temperature (in °F, R, °C or K), absolute pressure (in psia or kPa) and enthalpy (in Btu/lb or kJ/kg). Exception: For systems where the working fluid is <i>liquid only</i> (no vapor at any point in the cycle) and where the type of liquid and specific heat of that liquid are clearly indicated on the diagram or in the Miscellaneous section starting on page 19, only mass flow rate and temperature (not pressure and enthalpy) need be specified. For reference, specific heat at standard conditions for pure liquid water is approximately 1.002 Btu/ (lb*R) or 4.195 kJ/(kg*K).	
*			Diagram must specify working fluid flow conditions at input to and output from each steam turbine or other expansion turbine or back-pressure turbine.	
:			Diagram must specify working fluid flow conditions at delivery to and return from each thermal application.	
			Diagram must specify working fluid flow conditions at make-up water Inputs.	

FERC Fo	rm 556 Page 12 - Cogeneration Facilities	
	EPAct 2005 cogeneration facilities: The Energy Policy Act of 2005 (EPAct 2005) established a new section 210(n) of the Public Utility Regulatory Policies Act of 1978 (PURPA), 16 USC 824a-3(n), with additional requirements for any qualifying cogeneration facility that (1) is seeking to sell electric energy pursuant to section 210 of PURPA and (2) was either not a cogeneration facility on August 8, 2005, or had not filed a self-certification or application for Commission certification of QF status on or before February 1, 2006. These requirements were implemented by the Commission in 18 C.F.R. § 292.205(d). Complete the lines below, carefully following the instructions, to demonstrate whether these additional requirements apply to your cogeneration facility and, if so, whether your facility complies with such requirements.	<i>(</i> D a
	11b Was the initial filing seeking certification of your facility (whether a notice of self-certification or an application for Commission certification) filed on or before February 1, 2006? Yes No	0
e s	If the answer to either line 11a or 11b is Yes, then continue at line 11c below. Otherwise, if the answers to both lines 11a and 11b are No, skip to line 11e below.	
ntal Us acilitie:	11c With respect to the design and operation of the facility, have any changes been implemented on or after February 2, 2006 that affect general plant operation, affect use of thermal output, and/or increase net power production capacity from the plant's capacity on February 1, 2006?	0
ле ЛЕ	[_] Yes (continue at line 11d below)	
Fundar neration	No. Your facility is not subject to the requirements of 18 C.F.R. § 292.205(d) at this time. However, it may be subject to to these requirements in the future if changes are made to the facility. At such time, the applicant would need to recertify the facility to determine eligibility. Skip lines 11d through 11j.	
s for oger	11d Does the applicant contend that the changes identified in line 11c are not so significant as to make the facility a "new" cogeneration facility that would be subject to the 18 C.F.R. § 292.205(d) cogeneration requirements?	0
ement from C	Yes. Provide in the Miscellaneous section starting on page 19 a description of any relevant changes made to the facility (including the purpose of the changes) and a discussion of why the facility should not be considered a "new" cogeneration facility in light of these changes. Skip lines 11e through 11].	
Requir utput	No. Applicant stipulates to the fact that it is a "new" cogeneration facility (for purposes of determining the applicability of the requirements of 18 C.F.R. § 292.205(d)) by virtue of modifications to the facility that were initiated on or after February 2, 2006. Continue below at line 11e.	
v 051	11e Will electric energy from the facility be sold pursuant to section 210 of PURPA?	Ð
rt 20(nerg)	Yes. The facility is an EPAct 2005 cogeneration facility. You must demonstrate compliance with 18 C.F.R. § 292.205(d)(2) by continuing at line 11f below.	
EPA of E	No. Applicant certifies that energy will not be sold pursuant to section 210 of PURPA. Applicant also certifies its understanding that it must recertify its facility in order to determine compliance with the requirements of 18 C.F.R. § 292.205(d) before selling energy pursuant to section 210 of PURPA in the future. Skip lines 11f through 11].	
	11f Is the net power production capacity of your cogeneration facility, as indicated in line 7g above, less than or equal to 5,000 kW?	0
	Yes, the net power production capacity is less than or equal to 5,000 kW. 18 C.F.R. § 292.205(d)(4) provides a rebuttable presumption that cogeneration facilities of 5,000 kW and smaller capacity comply with the requirements for fundamental use of the facility's energy output in 18 C.F.R. § 292.205(d)(2). Applicant certifies its understanding that, should the power production capacity of the facility increase above 5,000 kW, then the facility must be recertified to (among other things) demonstrate compliance with 18 C.F.R. § 292.205(d)(2). Skip lines 11g through 11).	
	No, the net power production capacity is greater than 5,000 kW. Demonstrate compliance with the requirements for fundamental use of the facility's energy output in 18 C.F.R. § 292.205(d)(2) by continuing on the next page at line 11g.

Information Required for Topping-Cycle Cogeneration Facility

If you indicated in line 10a that your facility represents topping-cycle cogeneration technology, then you must respond to the items on pages 14 and 15. Otherwise, skip pages 14 and 15.

The thermal energy output of a topping-cycle cogeneration facility is the net energy made available to an industrial or commercial process or used in a heating or cooling application. Pursuant to sections 292.202(c), (d) and (h) of the Commission's regulations (18 C.F.R. §§ 292.202(c), (d) and (h)), the thermal energy output of a qualifying topping-cycle cogeneration facility must be useful. In connection with this requirement, describe the thermal output of the topping-cycle cogeneration facility by responding to lines 12a and 12b below.

12a Identify and describe each thermal host, and specify the annual average rate of thermal output made available to each host for each use. For hosts with multiple uses of thermal output, provide the data for each use in separate rows.

į

-Cycle Operating and / Value Calculation	the Commission's regulations (18 C.F.R. § 292.205(b)) establishes the efficiency standard for both cogeneration facilities: the useful power output of the facility must be no less than 45 percent of natural gas and oil for supplementary firing. To demonstrate compliance with the bottoming standard (if applicable), or to demonstrate that your facility is exempt from this standard based installation of the facility began, respond to lines 15a through 15h below.	toming-cycle of the energy input -cycle efficiency on the date that
	If you indicated in line 10a that your facility represents <i>both</i> topping-cycle and bottoming-cycle technology, then respond to lines 15a through 15h below considering only the energy inputs an attributable to the bottoming-cycle portion of your facility. Your mass and heat balance diagram which mass and energy flow values and system components are for which portion of the cogen (topping or bottoming).	cogeneration nd outputs n must make clear eration system
	15a Did installation of the facility in its current form commence on or after March 13, 1980?	
	Yes. Your facility is subject to the efficiency requirement of 18 C.F.R. § 292.205(b). Demo	onstrate compliance
	No. Your facility is exempt from the efficiency standard. Skip the rest of page 17.	
	15b Indicate the annual average rate of net electrical energy output	kW
iing- ency	15c Multiply line 15b by 3,412 to convert from kW to Btu/h	0 Btu/h
Botton Effici	15d Indicate the annual average rate of mechanical energy output taken directly off of the shaft of a prime mover for purposes not directly related to power production (this value is usually zero)	hp
	15e Multiply line 15d by 2,544 to convert from hp to Btu/h	0 Btu/h
	15f Indicate the annual average rate of supplementary energy input from natural gas or oil	Btu/h
	15g Bottoming-cycle efficiency value = 100 * (15c + 15e) / 15f	0%
	15h Compliance with efficiency standard: Indicate below whether the efficiency value shown in than or equal to 45%:	n line 15g is greater
	Yes (complies with efficiency standard)	ncy standard)

Certificate of Completeness, Accuracy and Authority

Applicant must certify compliance with and understanding of filing requirements by checking next to each item below and signing at the bottom of this section. Forms with incomplete Certificates of Completeness, Accuracy and Authority will be rejected by the Secretary of the Commission.

Signer identified below certifies the following: (check all items and applicable subitems)

He or she has read the filing, including any information contained in any attached documents, such as cogeneration mass and heat balance diagrams, and any information contained in the Miscellaneous section starting on page 19, and knows its contents.

He or she has provided all of the required information for certification, and the provided information is true as stated, to the best of his or her knowledge and belief.

He or she possess full power and authority to sign the filing; as required by Rule 2005(a)(3) of the Commission's Rules of Practice and Procedure (18 C.F.R. § 385.2005(a)(3)), he or she is one of the following: (check one)

The person on whose behalf the filling is made

An officer of the corporation, trust, association, or other organized group on behalf of which the filing is made

An officer, agent, or employe of the governmental authority, agency, or instrumentality on behalf of which the filing is made

A representative qualified to practice before the Commission under Rule 2101 of the Commission's Rules of Practice and Procedure (18 C.F.R. § 385.2101) and who possesses authority to sign

He or she has reviewed all automatic calculations and agrees with their results, unless otherwise noted in the Miscellaneous section starting on page 19.

He or she has provided a copy of this Form 556 and all attachments to the utilities with which the facility will interconnect and transact (see lines 4a through 4d), as well as to the regulatory authorities of the states in which the

facility and those utilities reside. See the Required Notice to Public Utilities and State Regulatory Authorities section on page 3 for more information.

Provide your signature, address and signature date below. Rule 2005(c) of the Commission's Rules of Practice and Procedure (18 C.F.R. § 385.2005(c)) provides that persons filing their documents electronically may use typed characters representing his or her name to sign the filed documents. A person filing this document electronically should sign (by typing his or her name) in the space provided below.
