

SAMPLE FORM

CONSTRUCTION AND CROP DAMAGE PAYMENT WORKSHEET

Otter Tail Power Company recognizes construction of the 230-kv transmission line facilities may cause damage to standing crops. Accordingly, the company will pay for crops including hay land damaged by the construction process. The damage payment for standing crop and potential compaction shall be determined by the following formula:

Acres * Yield * Price per bushel/ton

Otter Tail Power Company Land Specialists and the landowner/tenant shall jointly establish the acres affected by construction. To determine the yield component, we shall consider recent yields obtained by the landowner/tenant on the field affected. The price per bushel shall be determined by the market rate at the time of damages.

Otter Tail Power Company will include in the payment, crop damages for up to three years after the year of construction based on the following suggested schedule:

- Year 1 after construction: 50% of the value of the crop on the area affected by construction.
- Year 2 after construction: 25% of the value of the crop on the area affected by construction.
- Year 3 after construction: 25% of the value of the crop on the area affected by construction.
