

communication for two more mobilizations of SCN testing. As part of my work with the Project, I worked with, among others, Gerald Bermel, who is a field manager for the Project.

4. As part of the Project's SCN sampling process, along with its generalized outreach to landowners, the Project sent mailings to landowners regarding SCN and the Project's testing for SCN in September 2014, January 2015 and April 2015. Additionally, the Project had ongoing direct phone calls with landowners about permission to sample landowner's property for SCN in October 2014 and throughout the months of May and June 2015. In addition, Project's additional information related to the SCN testing was placed on the Project's website in June 2015.

5. In addition to the general discussion about SCN and continued outreach, the Project provided each landowner the actual test results from SDSU for the sampling performed by the Project on the landowner's property. Attached as Exhibit D is the form of the letter provided to the landowner containing their test results. Attached as Exhibit E is the form which actually transmits the test results to the landowner.

6. On June 29, 2015, the Project mailed SCN sampling test results to each landowner that was sampled.

7. On August 27, 2015, I personally contacted SDSU to confirm whether or not any landowners had requested additional information following receipt of their test results or further testing. To date, no landowners have contacted SDSU. Additionally, other than two landowners contacting the Project regarding administrative matters making sure the landowners received copies their SCN test results, none of the 238 landowners who received SCN testing results have contacted the Project regarding SCN.

Dated this 20 day of August, 2015.
