Subject: Prevailing Winds, docket # EL16-022

Dear Public Utility Commission,

I am writing in regards to the proposed wind farm near Avon SD, docket # EL16-022.

I think this project is a positive, safe and profitable opportunity for our state. Having lived in the Colorado front range area, before moving back home to SD last year, I know what true destructive and dangerous energy development looks like. The way that fracking wells dot the communities along the I-25 corridor emitting terrible pollution, even near to schools and neighborhoods is part of the reason I moved away.

I feel that our state is moving in a beautiful, exciting, progressive, new energy direction with these wind farms--wind being such a powerful resource here. This project will also bring good jobs and revenue to our state. Best of all, wind power is not destructive to the health of our communities or ecosystems at large.

I truly believe that with every step our society takes toward sustainable energy development, like this proposed wind farm, we're taking a step away from damaging and dangerous fossil fuel energy development. I think SD should continue to embrace projects like this one and approve the permit right away.

Thank you,
Laurie Anderson
