EL 18-003 in the matter of the application by Dakota Range I, llc and Dakota Range II, LLC for a permit

Good evening, My name is Teresa Kaaz, my husband is Daniel Kaaz. we live at [REDACTED], south shore in codington county. We live on 15 acers We are non participating landowners and are suuounded by wind lease holders. I am asking you the puplic utilities commission to deny the application from Dakota Range one llc and Dakota range 2 llc for the following reasons.

As non participation land owners we have privy to a lot of benefits from Wind.

We get Flicker which is voluntarily given to us no more thent30hours a year. That is hard to measure as we have to gather the info for a full year to see if that promise has been upheld. Then do another year study to make sure it is not in compliance. when that study is done if there is a problem I am sure it will taken care of asap.

We receive sound measured at 50 decibles at the property line. At least it is not measured at the residential dwelling. Only time will tell if there will be a problem with that. probally right around bedtime.

Infrasound...which must not really exist because those levels aren't covered is the application.

We will get new Visual effects. We are going to enjoy our new viewing landscapes because we will have a 360 degree sightline of 465 foot spinning Industrial privatly owned utility turbines.

Economic impacts should be nothing to concern any of you. Dan and I will watch or realastate values slowly dwindle away as more towers come through all the surrounding counties including Codington. I am sure we can sell our property at a fair price when we are ready to retire. Anyone would love living amongst 465 foot turbines.

lastly we should cover safety. /there is nothing like living within the safety zone of a wind tower. What could possibly happen. I will think of this as wind employees are asked to stay 1640 or so from a turbine until it is stopped but at 1500 feet from the corner of my home I i will be safe if there is a brake failure spinning out of control and the blades crash in the tower.

it is my understanding that the applicants resposibility is to prove that it does not impair the health safety or welfare of the inhabitants it has not done that by not following there own safety standards the this permit be denied at this time.
