

Additional Testimony

Wetlands

The attached map is from the Miner County Conservation office. The map shows our home section and all the wetlands.

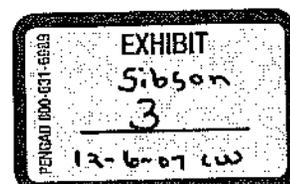

The Black line shows how the proposed pipeline route goes thru our land.
All the darker/black areas are wetlands and the blue circles mark the dugouts.

All the water that flows thru the land exits the same area that the proposed pipeline exits.

As a landowners and farmers, we love the land. We do not farm fence row to fence row. We have protected the many wetlands on our land. We have close 200 acres of native grass. We do not want the grass damaged. We are stewards of the land. We will do what we can to protect the native grass.

Respectfully submitted
