This email is my notification that as a citizen of this state, I believe that we should be making investments into sustainable energy projects, not tired, dirty energy sources. Energy companies have a way of forgetting about their responsibilities as with the North Cave Hills area of northwest sd--where signs point to radioactive waste. You have no commitment from this venture; it isn't even guaranteed that the whole thing will happen. The SD PUC should say no to the energy companies who are struggling to make the most of their old world technology. It's unfortunate that our state doesn't have a true commitment to a clean energy future. Please NO pipeline.
