Investigation of Gas Related Incidents

Introduction

- Incidents
  - Kitchen Works

- A case study
Incident, 191.3

Incident means any of the following events:

- (1) An event that involves a release of gas from a pipeline, or of liquefied natural gas, liquefied petroleum gas, refrigerant gas, or gas from an LNG facility, and that results in one or more of the following consequences:
  - (i) A death, or personal injury necessitating in-patient hospitalization;
  - (ii) Estimated property damage of $50,000 or more, including loss to the operator and others, or both, but excluding cost of gas lost;
  - (iii) Unintentional estimated gas loss of three million cubic feet or more;
(2) An event that results in an emergency shutdown of an LNG facility. Activation of an emergency shutdown system for reasons other than an actual emergency does not constitute an incident.

(3) An event that is significant in the judgment of the operator, even though it did not meet the criteria of paragraphs (1) or (2) of this definition.

(1 95 video)
PHMSA Definitions for Data Analysis

- Serious pipeline incident: an event involving a fatality or injury requiring in-patient hospitalization.
- Significant Incidents: incidents reported by pipeline operators when any of the following conditions are met:
  1. fatality or injury requiring in-patient hospitalization
  2. $50,000 or more in total costs, measured in 1984 dollars
  3. highly volatile liquid releases of 5 barrels or more or other liquid releases of 50 barrels or more
  4. liquid releases resulting in an unintentional fire or explosion
Purpose of the Investigation

- Determine cause
  - Probable Cause – The likely scenario that brings together fuel, O2 and ignition sources resulting in fire or explosion
- Determine compliance with standard practices
- Determine need to revise standards
§192.617 Investigation of failures.

Each operator shall establish procedures for analyzing accidents and failures, including the selection of samples of the failed facility or equipment for laboratory examination, where appropriate, for the purpose of determining the causes of the failure and minimizing the possibility of a recurrence.

(GPTC Guidance)
(enforcement guide)
Investigation of Gas Related Incidents

Reporting Incidents

- **Reportable incident** (Lafayette)
- **National Response Center**
  - 800-424-8802
  - Report number, stays in system
- Incident report to OPS within 30 days
  - Supplemental reports
GPTC Guidelines - Operator

GM 192.617(4)
– (a) Determination of the probable cause of the incident.
– (b) Evaluation of the initial response to the incident.
– (c) The need for system improvements if necessary.
– (d) The need for improvements in response, management and investigation of incidents.
Initial Response to an Incident

- Hazard?
- Extent?
- Life
- Property
“Make Safe” Actions
To Consider in an Emergency

- Implement company emergency plan
- Evacuate buildings
- Block-off area
- Reroute traffic
- Eliminate sources of ignition
- Ventilate
- Stop the flow of gas
- Notify police and fire departments
Operator Response to an Incident

- Deploy supervisory personnel and customer service/maintenance crews
- Implement/continue make-safe operation
- Establish gas or product migration area
- Control gas/product flow
- Initial Observation of conditions
Operator Response to an Incident

- Establish liaison with public and regulatory officials
- Initiate drug/alcohol testing
  - (drug 32 hr, alc 2 hr/8hr)
- Review of actions taken
- Initiate additional measures
- Recommendations
The Operator’s Investigation Team

- Legal
- Leak survey
- Pressure/measurement/odorization
- Safety
- Corrosion
- Codes and compliance
The Operator’s Investigation Team

- Public affairs
- Risk management/claims
- Technical services
- Customer service
- Construction/maintenance
- Outside experts
Regulatory Preparedness

- **Training**
  - Regulations
  - Investigation techniques

- **Reporting considerations**
  - Visual – photo, video
  - Written – field notes
  - Audio – recording

- **Communications procedures**
  - Radio security
  - Cell phone
Regulatory Preparedness

- Media relations
  - Media spokesperson
  - Prepared statements
- Review NTSB reports
- Additional experts and assistance
Agencies Involved

- Homeland Security
- Coast Guard
- ATF/FBI
- NTSB
- OPS/PHMSA
- State regulatory agency
- Local fire marshal
Properties and Characteristics of Common Combustibles

- Properties of gases
- Specific gravity
- Ignition sources
- Flammable limits
- Odorization (surveillance video)
Physical Properties of Gases

- Organic
- Hydrocarbon
- Flammable Limits
- Ignition Temperature
- BTU Value
Characteristics of Natural Gas

- Non-Toxic
- Colorless
- Odorless
- Specific Gravity
- Combustible Range
Effects of Natural Gas on Soil and Vegetation
Effects of Natural Gas on Soil and Vegetation

- Displaces Soil Atmosphere
- Drying Effect
- Eliminates Aerobic Bacteria
- Reduces Soil Components
- Changes PH

Investigation of Gas Related Incidents

CHROMATOGRAPHIC ANALYSIS: SWAMP GAS

Barhole Sample

Result: Swamp Gas

Methane

CO₂

No Ethane

X2

Nitrogen

25
CHROMATOGRAPHIC ANALYSIS: NATURAL GAS

Barhole Sample

Result: Natural Gas

Indicates Natural Gas

- Methane
- Nitrogen
- Ethane
- CO₂
Investigation of Gas Related Incidents

CHROMATOGRAPHIC ANALYSIS: COMPARISON

- No Ethane
- CO₂
- Ethane
- Methane
- Soil Gas
- Nitrogen
- Natural Gas

[Image of gas chromatogram with peaks labeled for comparison]
Sources of Combustible Vapors

- Natural Gas - Methane, Ethane
- Gasoline - C5's and heavy HC's
- Soil and Landfill Gas - Methane, CO2
- Gases in Sewers - Solvents, Alcohol
- Sewer Gas - Methane, CO2, H2S
There is NO Such Thing as Sewer Gas!
Factors Which Affect Odorant Quantity

- Odorizer Shut-Down
- Contaminants in Odorizer
- Natural Occurring Sulfurs
- Distillates in Pipeline
- Pipewall Adsorption
- Oxidation in Pipeline
Factors Which Affect Odor Quality

- Physical Ailments
- Soil Adsorption
- Masking
- Distraction
Combustion Explosions

- A rapid burning of fuel and production of combustion by-products and heated gases causes elevated pressures.
- Deflagration – combustion reactions where velocity of the reaction is less than the speed of sound in the fuel.
- Detonation – reaction is greater than the speed of sound.
Combustion Explosions

- Flammable gases
- Vapors of flammable/combustible liquids
- Dusts
- Low explosives (deflagration)
- High explosives (detonation)
- Smoke, products of incomplete combustion (backdrafts)
Investigation of Gas Related Incidents

**Explosion Pressures**

- **Solid Explosive**
- **High Order Explosion**
- **Methane-Air Mixture**
- **Low Order Explosion**

Time in Seconds

PSIA

0 20 40 60 80 100 120

0.02 0.04 0.06 0.08 0.10 0.12 0.14 0.16
Explosion Damage

- Low order
  - Walls moved or bulged
  - Walls laid down
  - Roofs lifted and set down
  - Windows moved, glass may not break
  - Debris, large chunks, thrown short distance

- Slow pressure rise
Explosion Damage

- High order (Canada 2)
  - Shattering of structure
  - Pulverized debris
  - Walls, roofs splintered
  - Building demolished
  - Debris thrown great distance

- Rapid pressure rise
Conducting the Investigation

- Secure the scene
- Initial assessment
- Detailed assessment
- Determine origin
- Determine fuel
- Determine ignition source
- Establish cause
- Time Line Analysis
The Six Steps

- Preliminary investigation
  - Secure the Scene
  - Initial Assessment

- Detailed Assessment
  - Determine Origin
  - Determine Fuel
  - Determine Ignition Source
The Six Steps

- Collect data
  - Records
  - Sample collection
  - Documentation
- Analyze data
  - Analysis of facts
The Six Steps

- Develop hypothesis
  - Establish Cause
- Test hypothesis
  - Time Line Analysis
The Preliminary Investigation

- Perimeter testing
- Testing of adjacent gas mains and services
  - Leak survey
  - Pressure test
- Establish when gas not present
- Other sources of combustibles
- Avoid early opinions of fault
WHERE is the Gas?
The Cure

Where is the gas?

How much is there?

Extent of hazard (migration)

Relation to other structures

Evaluate/Evacuate
Sources of Combustible Vapors

- Natural Gas - Methane, Ethane
- Gasoline - C5's and heavy HC's
- Soil and Landfill Gas - Methane, CO2
- Gases in Sewers - Solvents, Alcohols
- Sewer Gas - Methane, CO2, H2S
The Preliminary Investigation

- Expanding technique
- Log of investigation
- Record test results
- Photographic documentation
- Cooperate with public officials
The Preliminary Investigation

- Liaison procedures
- Witnesses
- Statements
- Documentation
Initial Analysis of Situation

- Review and document action taken
- Review records
- Who to involve
Initial Analysis of Situation

- Outside specialists
- Future investigation
- Odorant level test
- Appoint one coordinator for case
Conducting the Complete Investigation

- What was the combustible?
- Where did it come from?
- How did it get to the site?
- Sample collection and analysis
- Natural gas vs. Other combustibles
Conducting the Complete Investigation

- Sewer system
- Combustible liquids and vapors
- Prepare drawings
- Plot all utilities
- Floor plans
Conducting the Complete Investigation

- Prepare plans for all gas piping and controls
- Field actions vs. O&M procedures
Records of an Incident

- Maps of area
- Establish workable scale
- Secure original reports
Photographic Record of an Incident

- Detailed list of necessary photographs
  - All sides of structure
  - All equipment
  - Start far away, move in
  - Relative scale, comparison
  - Watch backgrounds

- Overhead photographs if possible
The Value of Good Documentation

- Need for documentation
- Need for straightforward reporting
- A picture is worth a thousand words
- Notes and field sketches
- Site drawings for all investigators
Investigation of Gas Related Incidents

The Value of Good Documentation

- Document facts not opinions
- Incoming calls
- Service orders
- Repair/maintenance records
- Leak control records
Investigation of Gas Related Incidents

The Value of Good Documentation

- Construction records
- Corrosion control records (steel)
- Odor tests
- Locating records
- Meter reader records
Analysis of Facts

- Review historical data
- Witnesses' statements
- Observations
- Test results
- Laboratory analysis
- Experts' reports and evidence gathering
Time Line Analysis

- Pre-incident events
- Incident
- Post-incident events

- (Too little too late)
Handling Lab Analysis

- Samples
- Security
- Location
- Time
- Witnesses
Data Prior to Incident

- Floor plans, drawings, photos
- Utility layouts
- Aerial photos
- Additional data - (employees /neighbors)
Handling Statements From Witnesses

- Obtain soon after incident
- Signature/full address
The Use of Outside Experts

- Choose them in advance
- Know their areas of expertise
- Lawyers familiar with gas distribution
- More than one for availability
Demonstrations, Test Procedures and Instruments

- Models
- Maps, charts, diagrams
- Sewer examinations
Security of Evidence

- Preserving the scene
- Securing the evidence
- Chain of custody documentation
- Secure storage area
- Documentation
Accident Response Kit

- Gas detection equipment (CGI)
- Plunger bar
- Sample collection equipment
- Safety gear, ID card
- Latex gloves
- Company manuals
- Call out lists
Accident Response Kit

- Report forms (all types)
- Camera and film
- Ruler/measuring tape
- Drawing tools
- Paper, pens, pencils
- Tape recorder
- Marking flags/paint
- Batteries
- Flashlight
- Power strip inverter
Wrap-up

- Conclusions
- Session evaluations
