

WATER RESEARCH FOUNDATION

Water Use Efficiency
&
Water Utility Financial Impacts

**Shonnie Cline
Sr. Account Manager
June 6, 2011**

Why Conservation?

- Viable complement to, or a substitute for, investments in long-term water supplies and infrastructure.
- Shortage management due to drought.
- State mandates to ensure resource sustainability.

US Community Water Systems

	Population served	Number of systems	Percent	Population served	Percent
Very small	<501	29,160	56.1%	4,857,104	1.7%
Small	501-3,300	13,858	26.7%	19,868,795	6.8%
Medium	3,301-10,000	4,838	9.3%	28,134,557	9.6%
Large	10,001-100,000	3,728	7.2%	106,310,834	36.4%
Very large	>100,000	404	0.8%	133,128,786	45.5%
Total		51,988	100.0%	292,300,076	100.0%

Public vs. Private

	Percent private	Percent public
Very small (population <501)	77.7%	22.3%
Small (population 501-3,300)	19.5%	80.5%
Medium (population 3,301-10,000)	14.6%	85.4%
Large (population 10,001-100,000)	15.1%	84.9%
Very large (population >100,000)	8.9%	91.1%

If Supplies are Available

- Planners must consider the cost of:
 - Water rights
 - Infrastructure for raw water
 - Infrastructure to treat water
 - Increased operating costs (energy, maintenance, etc.)
- Other considerations:
 - Water quality
 - Environment
 - Reliability of source

Water is a Finite Resource

- ❑ 20 x 2020 - There must be reductions in consumption of water for the sake of sustainability
- ❑ Climate uncertainty
- ❑ Even with conservation shortages will occur

Benefit-Cost Analysis

- Multiple tools available to utilities to analyze conservation benefits:
 - Water Research Foundation's Benefit-Cost Model (Chestnut, Thomas, et. al., 2007)
 - Water Conservation Tracking Tool - Alliance for Water Efficiency
- Considers increments and decrements of cost that result from conservation programs – not total cost.
- Models analyze cost-effectiveness from multiple perspectives, calculate benefit-cost ratios, unit costs, annual savings and costs, and other key parameters

Financial Impacts

- Emergency curtailment - generally not factored into existing rates
- Historic industry trend of suppressed rates:
 - Politics, development, impact fees, deferred maintenance and capital investment.
 - Management of rates often tied to ownership (public vs. private).
 - Customer acceptance

Current and Future Issues

- Operating costs will continue to rise:
 - Increased treatment
 - Energy costs
 - Aging infrastructure
 - Chemical costs
- Even without conservation programs in place, many agencies are seeing reduced consumption – forecasting can be a challenge
- Employee benefit programs are crippling some utilities
 - Customers may not be willing to raise rates to support retirement plans.
- Some publically held utilities are financially supporting other city functions.
