

**Phone visits by Cindy Myers with 3 SD Water treatment plants
April/May 2015**

- **I visited with three SD water treatment plants using water from the Missouri River. Two water treatment plants were unaware of response planning to an oil spill affecting the Missouri River, the third did say a spill kit (for water analysis) is available for emergencies.**
- **“DNR usually sends out information, but “haven’t heard a word from them” when asked what he knew about tar sands spillage into water.**
- **The Bureau of Reclamation would notify them if an oil spill threatened the water supply.**
- **One plant thought benzene analysis was done quarterly and another plant thought benzene analysis was done yearly.**
