Subject: [EXT] Carbon Transport Pipeline

I am writing concerning this carbon pipeline. I feel it is a waste of money considering there many other options. such as cover crops or other ways to sequester carbon with farming practicing that are yet to be discovered. These options would cost far less than the billions of \$'s that will be needed to construct this pipeline.

Currently, we have Dakota Access Pipeline on our property. It has been very destructive and the ground is not back to its' original state after 5 years.

I am not against progress. I am against high dollar projects that have other solutions. I don't think it is right that a private company can exercise private domain.

Thank you for your time and consideration.
