¹ Prime Farmland Soils: Yes = All Areas are Prime Farmland; Yes, if drained = Prime Farmland if Drained; Yes, if irrigated = Prime Farmland if Irrigated; No = Not Prime Farmland; SWI = Farmland of Statewide Importance.

² The Kw Factor quantifies the susceptibility of soil particles to detachment and movement by water. Values range from 0.02 to 0.64.

- 0.02 - 0.25 - Resistant to erosion by water
- 0.25 - 0.40 - Moderately susceptible to erosion by water
- 0.40 - 0.64 - Highly susceptible to erosion by water

³ The wind erodibility group is a numerical value indicating the susceptibility of soil to wind erosion, based on the predominant soil texture class of surface layer. Values range from 1 to 8.

- 1 - 2 - Highly susceptible to erosion by wind
- 3 - 6 - Moderately susceptible to erosion by wind
- 7 - 8 - Least susceptible to erosion by wind

⁴ Operations impacts include soils which would be permanently impacted. Only permanent facilities will have permanent impacts.

⁵ Construction impacts include impacts from both operations and construction.
