I was at the Defmet PUC meeting on 24th Mar. I told them about new use of CO₂. The story was in the 26 Feb. in Heron Daily Plainsman page 5. The story name is Bacteria upcycle carbon waste in valuable chemicals. It tells how they convert CO₂ into acetone + isopropanol. This process would eliminate the need of the piping. As you know Poet isn't a part of this project. Not saying they will do this. But it makes sense they might.

acetone is a solvent for making plastics,
isopropanol is in disinfectants.
