SOUTH DAKOTA PUBLIC
UTILITIES COMMISSION

Hello.

My name is Dan Becking from Watertown. I was at the carbon dioxide meeting in Desmet on 3-24-22

I have a small acreage in Pelican Township Codrington County [REDACTED]

[REDACTED] There is no house on property now. But the site is now just used as a grain bin and pasture site. But most of the grain bins are ~~out~~ out date and no big farm is going to want them.

This is short distance from Watertown and if someone would buy it. They ~~would~~ would want to put a house on the property.

If the pipeline is not a safe distance from a home. I need to know what value to ask if they devalue my property.

There was a woman from Hartford and a guy from Watertown, asking the same question?

What is a safe distance from this pipe line? The line by Watertown is a small one. The people by the main line have a big concern. Maybe Summit Carbon Solutions should buy them out and relocate them.

I am a member of Glacial Lake Energy. I have been from the start of Company. I know the value of ethanol to rest of area, and what the price of corn was before the plant was build.

Is our State sick with greed? how much is human life worth. We are all caught up in our selfish needs and concerns.

Are we just gambling with peoples lives.

I feel everytime we sign a easement we get taken advantage of. These big company make promise. But if its not witten down, They will not pay anything out.

Mary Smith of Willow Lake asked if a owner rents out there property and the renter damage the pipe line down the road or have multiple renter.

Why should the owner be liable over several years if the covering is nick and starts to rust. How long before something happens to the pipe.

For most of us it is hard to know the danger of Carbon dioxide. We have all heard of Carbon monoxide and it is easy to mix them up with each other.

It is Public Utilities Commission look out for us. And not gamble with peoples lives

Thank You

Dan Becking
