**Subject:** [EXT] CO2 PIPELINE CROSSING SD

Gary:

Time has passed since you were mayor of Sioux Falls and you helped me get dances at the old Coliseum. However, I am now writing and contacting you about this pipeline that is proposed in going across SD. I do not support many of the goals and directives of the green energy. My standards, of listening, reviewing, and discussing with others, strongly feel that we as citizens of our land are being led down a never ending road of costs and directions that will cost us taxes that will drive our country to bankruptcy.

Now, I was listening to fellow SD people that are deeply concerned on the reason why this pipeline is needed. Carbon collection? Carbon is needed for all of us, including the farmers for the life of plants. From investigations of the theory that carbon is the threat, this direction is still very weak in scope and direction.

Now, I am hoping that you will get with others to not support this pipeline move. This move is more against the owners of land that are being hit with taking the land for the use of the pipeline. These owners are standing up against the move and being more FORCED to give up their rights to property. They are standing up against this move.

I called the governors office and they referred this action to your area of expertise. A special session of the legislature must be asked for with a request to the Governor. This discussion is a must for SD. And this is a must for other states of an action of trying to force land owners to give up their property for something they do not believe in.

I look forward to your response. Thank you Glenn Nelson
