Docket # HP 22-001

My name is Scott Rozell, this email is to inform you that I am against the Summit Carbon Solution pipeline. I have been farming in Brown County all my life being a steward of my land to try to make it as productive as possible. But by allowing Summit Carbon Solution to put a pipeline through my land I cannot help but think that all my years of caring for my land will be in jeopardy. I know there are many pipelines going through the state of South Dakota, but this one is different because of the danger it will present. This pipeline will go through 4 of my quarter's of land that will cause many years of damage to my land not to mention the danger it will cause if it ruptures. A unnamed legislator said he has

a natural gas pipeline going through his land for many years with no problems . After researching a carbon pipeline the psi of a carbon pipeline is many times greater than that of a natural gas line. So the chances of a rupture is many times greater not to mention first responders do not have any experience in how to deal with a rupture of this type of pipeline. Which will put many peoples health and lives a greater risk if such an event would occur. Summit Solutions try to say that the land will be put back into the same form as it was before but we all know that isn't true because once the land is disturbed it will never be the same.

How can a private company use Eminent Domain to take privately owned land and use it for their profitable gains? This is my land that I bought and am still paying for I should have the freedom to say what happens to my land. Just because some company with lots of money wants to USE my privately owned land just to make more money isn't right. I know money talks in this country but lets be real money should not be the deciding factor of taking privately owned land and use it for profits that so many of us have worked so hard to make a living.

Summit Solution has been very sketchy with the information it puts out and are not very transparent with that information which leads me to believe that there is more to this than just taking carbon out of the atmosphere and storing it under ground. Someone is going to make a lot of money from this while we as land owners will suffer the damages and loss of income for many years to come as we try to make our land productive and to make our living farming this land.

I am NOT in favor of this pipeline for a few reasons, It will put peoples lives at risk, this pipeline goes with in several hundred feet of some farms and houses so if it ruptures it can cause great danger to those people close to the line. Summit Solutions try to say if it ruptures it will just turn into gas form again and dissipate into the atmosphere which is true but not until after it takes some ones life away . The citizens of this great state deserves to be protected by our leaders by not giving into this corporate greed that we see so much of these days . So I ask you to please stop this Pipeline and protect the people and the land of this great state of South Dakota.

Thank You for your time ,

.
