Docket Number: HP24-001 Last Name: Rentschler First Name: Clayton Company: Retired
Address: [REDACTED] City: Flandreau State: SD Zip: 57028 Phone: [REDACTED] Email:

[REDACTED] Comments: Another concern is public education. What measures have they taken to protect the general public. This pipeline crosses many townships, county, state and federal roads. Will they put up warning lights. Will there be closure gates you see on the on-ramp of interstate? What's going to stop the general public from driving into a catastrophe in the event of a rupture? Will there be broadcast warnings like the National weather service has? If a rupture was to occur in a highly populated area how in the world with the hospitals ever handle it? This project is ridiculous. I've heard that our CO2 level could triple and would do nothing but better the earth. It would give us more crop yield plus make our crops more drought resistant. Now what farmer/rancher or ethanol plant in their right mind would want to reduce CO2 levels. Also Summit does not produce one penny of revenue off of this project that I know of. It is all taxpayer funded. Money and greed are the enemy here not CO2. In my opinion summit is in a worse position now than what they were two years ago when their permit was denied. Summit is still trying to make us play that ugly game of Russian roulette. PHMSA has not even ruled on this so how can a permit even be granted? They still cannot comply so I ask you to deny. Keep in mind that this is nothing but a garbage line. They're picking up CO2 and bringing it to a hole in North Dakota. North Dakotans do not want our garbage. The majority of us do not want this high pressured, dangerous pipeline running through our property. The voters have spoken. God bless our veterans and the farmers who feed them. ususus Clayton Rentschler Flandreau South Dakota
