Subject: [EXT] Summit Hazardous CO2 pipeline

Summit's Hazardous CO2 pipeline CEO is stating he wants to take 3.3 Billion gallons of water every year, from the purest water aquifer, in one of 5 states on the planned route.

Why should this private company get this PUBLIC water source for free?

Should they even be allowed to take this amount of water...and potentially deplete water needed by towns, cities and individual property owners?

If there is no water in the well, a farmer's economic stability will decrease, the property value will fall.

If a landowner wants to make improvements to the land taken by Summit, they are not allowed to plant trees, or build over the area.....forever! Reducing any planned economic improvements. Resale values for the property will decrease.

Please deny Summit's request for a Hazardous CO2 pipeline permit!

Please deny Eminent Domain for this private business.

There are much better, less destructive ways to reduce CO2 in the atmosphere.

Thank you for your consideration,

Debra Freeman
