Subject: [EXT] HP24-001

Writing this letter reminds me all too well of the 2 years I spent trying to keep industrial wind turbines away from my home in 2017-2018. We lost that battle but gained a lot of knowledge about the South Dakota Public Utilities Commission and our State Government. They both are corrupt. Kristi Noem has her hands in the pot of Summit Carbon Solutions.

I learned at a 4 day evidentiary hearing with the PUC that your mind was made up before I even got there. It was a dog and pony show.

The voters of South Dakota recalled SB201 overwhelmingly. The pipeline is very dangerous and if there is a break it will kill people. But the obvious reason to stop this boondoggle project is it's nothing more than another green energy scam, just like the wind turbines and solar panels. It's \$359 billion in tax credits from the Inflation Reduction Act. We need carbon dioxide for our plant health. Don't you understand basic science?

I ask you to stop this project, but history shows that you care nothing about the residents and taxpayers of South Dakota. The corporations own you. So I'm not holding my breath.
