subject: HP24-001 Summit Carbon Pipeline objection - 2025

I wish to file a vehement objection for this unsafe, toxic, obsolete pipeline being purposed across the midwest states. As an impacted Iowa landowner I will NOT sign an easement. My parcels are impacted twice and they have no right to ram this scheme down my throat - an 84 yr old active farm lady - just for the money they get on 45Q & Z credits(my tax dollar subsidization) to tear up prime farmland and squander public use water. And furthermore this will in all probability will go for fracking not sequestration. The picture they present is certainly neither rosy or realistic. The damage will last decades and generations. If it were not about the money, this wouldn't even be a considered project. We are not Summit's guinea pigs and our land is not for sale at any price.

Being this is not a public necessity issue, I hope the eminent domain issue will not be allowed in play. Deals - influence - pay offs abound on this project and that is transparent. Think long and hard on this project. What legacy do you wish to leave once you are off this board? It will certainly follow you all the days of your life. Jean Granger [REDACTED] Fort Dodge Ia 50501
