**Subject:** [EXT] Comment on HP 24-001 Summit Carbon Pipeline

To: SD PUC HP 24-001

As a concerned citizen of SD, I was under the impression that the people of SD made their voices heard when RL-21 was defeated in the election in November 2024. Apparently I was mistaken.

Before pipelines of the nature are put in place many valid questions/answers need to be made public. Summit has not proceeded as a company that displays ethics, integrity or public trust, i.e.: using scare tactics and threatening landowners, not providing accurate and vital information regarding safety concern (plume studies), deceiving the public on benefits/risks, and issues concerning infrastructure in regard to use of water, electricity, etc. in the CO2 capture process.

Thanks you for allowing me to voice my concerns and know that I do not support this project.
