Subject: [EXT] HP24-001 carbon capture pipeline issue

Dear PUC,

We do not support the use of eminent domain to install CO2 pipelines which are falsely being promoting in the name of climate change. We the people voted against this and our representatives must be allowed to represent the people who elected them. Thus we still have a constitution.

By the way, the climate change debate is not about making things better for everyone. The World Economic Forum and other high ranking officials will make billions from the expenses incurred by we the working people. The government is about control and bankrupting most of the people here. The Smart Meters are not about keeping us healthy or safe. Furthermore, we are allowing corrupt companies like Xcel Energy to force citizens to risk their health by being exposed to harmful electromagnetic radiation not just from our homes but from all the other meters in the neighborhood. In addition, we pay the mortgages on our homes not the government. We get letters from a third party tied to Xcel Energy urging us to pay for extra coverage in the event that the smart meters cause our home to burn down. This is robbery. We pay home owners insurance.

In conclusion, we do not support the pipelines as they are not about helping the environment or the people. We want our elected representatives to assist us as we voted for them to uphold the law. God will certainly judge what we are doing in the end. Our future generations deserve a better life than one in which they are exposed to harmful radiation and pipelines that may explode and cause loss of life.

Sincerely,

Nikki McCormack
