Subject: [EXT] Summit Carbon

Mr. Nelson,

I again ask you to protect our state from carbon sequestration. Respiratory acidosis is a horrible way to die. If a carbon dioxide pipeline is allowed to go through, it will eventually leak. Those of us and our families in the proposed kill zone could be killed in a matter of agonizing moments, all for the grabbing of tax dollars that the federal government has provided. Just think, those in the kill zone would have furnished some of the money that could potentially kill themselves!
