RECEIVED
MAR 01 2018
SOUTH DAKOTA PUBLIC
UTILITIES COMMISSION

Dear Commissioners,

There are many concerns we have regarding the wind towers. We would like to mention the most we feel are important. They are Trust and Respect. With any issues in life we feel these are the most important and effect people the most. Geronimo is asking people to put their faith and trust them. For that to happen we feel these things should be addressed. Why hasn't Geronimo even met with the township board members to discuss negotiations for the damage and repair of the roads that will be affected? To date this has not happened and is true because we are on the township board and they have not contacted anyone. That is asking people to put blind faith in them. That is very difficult to do since they are showing no respect to the townships. The county commissioners came up with a setback. First thing Geronimo did was threaten court. To date this is still an open court docket. If they want us to trust them why have they not closed this? When they are questioned about this they ignore us.

The thing that bothers us the most is the bullying. Social media keeps declaring the bullying needs to stop. This is a company that has single handedly come in to a community and done exactly that. We have grown up and lived in this community all our lives. We loved this community and were very proud of it. Not so much anymore. I have seen a community that has been completely torn apart. Family members do not even speak to each other anymore along with neighbors. It was very common to drive down the road and stop and visit with a neighbor, not anymore. I sure hope they are PROUD of themselves. How can we trust a company that didn't even put the people of the community first? I sure am not proud of our community anymore, which is sad because of all the fighting, broken promises and lies. All brought on by Geronimo.

Thank you for your consideration,

Dana and Lori Nordhus
