Jody Obermeier Rebuttal Testimony, Ex.

BEFORE THE PUBLIC UTILITIES COMMISSION OF THE STATE OF SOUTH DAKOTA

IN THE MATTER OF THE APPLICATION BY CROCKER WIND FARM, LLC FOR A PERMIT FOR A WIND ENERGY FACILITY AND A 345 KV TRANSMISSION LINE IN CLARK COUNTY, SOUTH DAKOTA, FOR CROCKER WIND FARM

SD PUC DOCKET EL-17-055

PREFILED TESTIMONY OF JODY OBERMEIER ON BEHALF OF CROCKER WIND FARM, LLC

April 13, 2018

1 2

I. INTRODUCTION & BACKGROUND

- 3 Q. Please state your name and address.
- A. My name is Jody Obermeier and my address is 16018 417a Avenue, Clark,
 South Dakota.
- 6

7

Q. Please describe your familiarity with the Crocker Wind Farm (the "Project").

- 8 A. I, along with my family, am a participating landowner in the Project. When 9 Crocker Wind Farm, LLC ("Crocker") came to our family with the opportunity to 10 be participating landowners in the Project, we decided it was what was best for 11 our land, our family, and our community.
- 12

13 Q. What is the purpose of your testimony?

- A. The purpose of my testimony is to explain the Project's great benefits from the
 perspective of a farmer, wife and mother, member of this community, and
 landowner.
- 17
- 18

Q. Please describe your home.

A. I live on the Obermeier Ranch, a third generation ranch in the Crocker Hills, with
my husband Ted. My husband and his brother took over the ranch from their
father and we continue to operate it as a family. We mainly raise cattle, but we
also have crops. I grew up in a neighboring community to the Project. My
parents and siblings still reside in this area. Our family roots and family pride run
deep. This area is our home, and it is where we want to be and where we want
to raise our children.

26

27

II. BENEFITS OF THE PROJECT

28

29 Q. Why did you decide to participate in the Project?

30A.My family decided to participate in the Project because we wanted to do what31was best for our land, our family, and our community.Our land is our livelihood,

and taking care of it is very important to my family. Everything that happens on
 our land is carefully thought-out – whether it's where to graze our cattle or what
 crop rotation we should use. We do what is best for the condition of the land – it
 is a valuable resource and is an important part of not only our family's history, but
 our future.

- 6
- 7

Q. Describe your interactions with the Applicant.

A. When Crocker approached our family with an opportunity to be part of the
Project, we made the decision to participate after a lot of careful thought,
research, and collaboration with Crocker. We worked closely with Crocker to
develop our lease agreement over the course of a couple years. Crocker
considered our thoughts and requests, and has shown itself to be a very
responsible, respectful company.

14

15 Q. What does the Project mean for you and your family?

16 Α. The Project means stability, financial security, a way to pay debt, and a way to diversify our ranch. The wind farm is a great opportunity to maximize the use of 17 18 our property, allowing our operation to grow and remain competitive in an 19 industry where farming operations have been getting bigger and bigger. The 20 Project provides a diverse and stable source of additional income, which is especially important during bad crop years, or if crop and cattle prices are down. 21 22 The revenue from the Project will help us invest in our ranch, our family, and our 23 futures.

24

The Project also means a viable future here for our four children and other children in our community. Being able to work off the land and in our home community is something we learned as children and it is very important to us that this value is passed on. As our children grow up and become adults, we hope they can have the same opportunity we have had in making a living off the land. We have seen how difficult making a living off the land as a young farmer or rancher has become – many face struggles with the financial burdens and

-2-

volatile markets. Many children in communities like ours are forced to go
elsewhere looking for work because it is simply not feasible for them to stay and
making a living as a rancher or farmer in the communities in which they grew up,
or even in South Dakota. A stable income from the Project would help our ranch
and our community grow and thrive, and would create opportunities for our
children to make futures for themselves here.

- 7
- 8

Q. In your view, how will the Project benefit the community?

A. The Project would bring job opportunities to the community, particularly in the construction phase. In addition to creating construction jobs, local businesses will benefit from the increased economic activity during the construction period, such as hotels hosting traveling workers, gas stations selling fuel and snacks, restaurants and grocery stores supplying meals and food, local auto dealerships and repair shops doing maintenance work on construction vehicles, and hardware stores supplying things like safety glasses and lumber.

16

The Project will also provide tax revenue, increasing the local tax base, which will 17 18 benefit many aspects of the community, especially our schools. Expenses keep 19 going up over time, as do taxes. The Project would alleviate some of this burden 20 and would be a great source of income for our county and schools. The tax 21 revenue from the Project will benefit everyone in the community, not just the 22 participating landowners. For example, our property currently sits between two 23 operating wind farms – one north of us in Day County, and Oak Tree Wind Farm 24 southeast of us in Clark County. The Oak Tree Wind Farm is under 20 25 megawatts, and in 2016 provided over \$100,000 in taxes to the county. The 26 Project is much larger, and will provide even greater tax benefits to our 27 community. Additionally, the Project's community fund will have a great impact 28 on our local organizations.

29

- 1 The economic benefits that this Project will bring to our community, Clark County, 2 and the State should not be overlooked. Opportunities like this do not come 3 around every day.
- 4

III. PROPERTY RIGHTS

5 6

Q. There has been some discussion at the public hearing and in public comments regarding landowner rights. What is your perspective on this issue?

A. Our land is our livelihood – working off the land is something we do every day, and we take great pride in taking care of our land. My family, along with many other participating landowners in the Project, have worked the land for generations with the hope that we can keep it in the family name and pass it to the next generation. It is our way of life, and our landowner rights are sacred to us.

16

17 Some of those opposed to the Project have argued that it is their right as 18 landowners to prevent me from having turbines on my property. I disagree that 19 this is the right way to look at this issue. Rather, I feel our neighbors in 20 opposition to the Project are being allowed more rights to dictate what we do on 21 our land than we as landowners are being allowed.

22

23 My family wants these turbines on our land – we own the land and made the 24 decision to invest in our family, our farm, and our future by participating in this 25 Project. I, as a landowner and resident, should have the right to determine what 26 I can do with my land without someone telling me I can't because it bothers them. 27 It is important for us to remember that our rights as individuals need to be 28 balanced with the rights of others. The changes and adjustments Crocker has made to the Project layout as a result of community input have done exactly that. 29 30 Now it is the time for the Project to proceed.

31

Q. With that perspective in mind, do you have a response to the concerns that have been raised in this proceeding regarding wildlife and grasslands?

3 Α. Yes. As people who depend on the land, my family and I are conservationists. 4 We care about wildlife and the environment, and I think that framing this as "the 5 Project v. wildlife and grasslands" presents a false choice because the Project 6 will actually help participating landowners continue to be good stewards of the 7 environment. For example, I know that there have been some concerns about 8 the Project's impacts on grasslands. However, it is important to remember that 9 these grasslands are on private property. First, I want to point out that it would 10 be unfair and against landowner rights if the Commission decided that turbines 11 couldn't be placed on this private property because it would deprive landowners of their ability to have a say in what they do with their property. Second, as 12 13 private property, a landowner could plow these grasslands up anytime he or she Having wind turbines - with that additional source of revenue for 14 wanted. 15 farmers – seems to me to make it more unlikely that a farmer would choose to 16 start farming in grasslands and would result in even greater conservation.

17

18 In addition, I know that some people have argued that setbacks from certain 19 areas should be imposed, even though there are not any state, federal, or local 20 laws that would actually require that. Again, I think that is against landowner 21 rights. If a non-participating landowner wants setbacks from his property, he 22 should have to go out and pay his neighbors for those property rights - he 23 shouldn't be able to control what other people do with their property (and be the 24 cause of his neighbors losing out on valuable revenue) just by being the vocal 25 minority.

- 26
- 27 IV. CONCLUSION
- 28
- 29 Q. Does this conclude your rebuttal testimony?
- 30 A. Yes.
- 31

154 Dated this 13th day of April, 2018.
