To Whom This Concerns:

Yes, I am all for Wind Power:  
however, not where there are  
many young families that are  
trying to make their living  
farming and buying their farms  
to do it. I have a granddaughter  
that was diagnosed with cancer  
at 6 years old and is 10 years  
old now. Because of surgery  
she is deaf in her left ear,  
and wears a hearing aid that  
picks up vibrations from her  
right ear and transfer to her  
left ear. All research shows

The Wind Power give off vibrations  
that will effect her hearing aid.  
and these windmills will be  
within  $\frac{1}{2}$  mile away from  
their home. There will be  
8 windmills close.

Why can't these Windmill  
companies go out west to  
sections of ground where  
nobody lives. Like Jackson County  
as our family owns land  
there and 1 family lives  
on 3 sections.

Also talking to people near wind towers  
their livestock will not graze grass.  
The grass near the wind towers

remember animals can detect  
vibrations and even detect  
when storms are coming  
We need to learn more about  
the effects on livestock.
