Subject: [EXT] Wind energy

Dear Kristie, I am sending this email about wind energy in Deuel county. To say I am against is understating how I feel.

1) wind turbines are NOT clean energy that is very misleading. They use oil, steel, electric and gas to produce them. And electric and oil to run them.

2) they are noisy

3) they never produce enough energy to pay for them self.

4) what happens when they reach the end of their short life? They stay an eye sore because it cost too much to remove them.

5) they are harmful to birds, livestock and wildlife. The effect on hunting alone could be very harmful to our state revenue and the tourists. Also it can effect our family farmers.

6) all the electric produce only benefits Minnesota not South Dakota. They get the benefits and we get the mess.

7) before you jump into this you should research the wind farms in Calif. Find out if any have made a profit, paid for the clean up. Or even produced enough electric to justify the expense?

8) find out how they are managed I personally believe they will fail to live up to any agreements they make with you.

I do not believe the final decision should be left up to you. The voters should be the ones that have the final say. Remember us we pay your salary, we are the ones that live here not you. I don't see anything here that benefits us or our way of life. I would appreciate it if you would think of us not whatever \$\$ signs that you may see. Because they are an illusion.

I look forward to hearing how you vote. One conservative to another please don't do this to us.

Thank you

Dixie Tronvold
