Hi Kristen,

Attached is a shapefile of records within the SD Natural Heritage Database occurring within or adjacent to the project boundaries you provided. During the export process from the Database one of the fields, EO_data, is too large to include as a field in the shapefile attribute table. In order to access this information, records are also exported into a tabular form in the attached Word document. To match the records between the two formats you can use the EO_ID field which is a unique identifier for each species record

The search resulted in only two listed species, the Dakota Skipper (Federal Threatened Butterfly) and Powesheik Skipperling (Federal Endangered Butterfly). The remaining species are considered rare in the state. Rare species are those that are declining and restricted to limited habitat, peripheral to a jurisdiction, isolated or disjunct due to geographic or climatic factors, or that are classified as such due to lack of survey data. You can find some life history information for these species on our interactive Wildlife Action Plan Website <http://arcgis.sd.gov/server/gfp/wap/Default.aspx>. Click on "Launch SD Wildlife" and search for the species of interest to get life history information, a general distribution map and links to project reports.

Please let me know if you have any questions,

~Casey
