## **Bald Eagle Nest Survey Form**

Ideally, the nest should be checked two to three times, once in late March to determine if bald eagles are using the nest, once in early June to count the number of nestlings (this check is the least important), and once in late June just before fledging. Nest checks after major storms could also be useful. Choose a spot where you can see the nest well, but far enough away that you do not disturb the parents. If they are circling overhead or "barking" at you, you are too close, and you may cause the parents to abandon the nest site or the young to fledge too early. After the family has left in late August, try to make a final visit to the nest tree to take a GPS location and identify any food remains under the nest. Approach the nest only after the birds have gone and only if you have express landowner permission to be on the property. The most important information is: Is the site occupied by a pair of eagles? Did the pair attempt to nest? How many young survived to fledge from the nest?

Thank you very much for your help. If you have any questions, please feel free to call Corey Huxoll at 605-773-4195. Please return the completed survey forms to Corey Huxoll, SD Game, Fish & Parks, 523 East Capitol Ave. Pierre, SD 57501. E-mail: Corey.Huxoll@state.sd.us
