Invenergy's application includes an Environmental Constraints Map (Figure A-3). The map shows a two-mile buffer around two bald eagle nests. The South Dakota Game, Fish & Parks annually conducts a bald eagle nest survey. The two nests shown on the Environmental Constraints Map are identified in the Game, Fish & Parks survey as being active the past three years. However, that survey also identifies an additional bald eagle nest. That nest is located ¼ mile north of Lake Alice to the north of [REDACTED]. According to the survey this nest was used in 2016, 2017 and 2018. The survey results at this site recorded one fledgling in 2016, three fledglings in 2017 and two fledglings in 2018. Turbines will need to be moved to provide the two-mile bald eagle nest buffer. The three bald eagle nesting sites are the only known active sites in Deuel County. Attached you will find the 2016 thru 2018 survey reports for this additional nest.

Bald Eagle Nest Survey Form

Ideally, the nest should be checked two to three times, once in late March to determine if bald eagles are using the nest, once in early June to count the number of nestlings (this check is the least important), and once in late June just before fledging. Nest checks after major storms could also be useful. Choose a spot where you can see the nest well, but far enough away that you do not disturb the parents. If they are circling overhead or "barking" at you, you are too close, and you may cause the parents to abandon the nest site or the young to fledge too early. After the family has left in late August, try to make a final visit to the nest tree to take a GPS location and identify any food remains under the nest. Approach the nest only after the birds have gone and only if you have express landowner permission to be on the property.

The most important information is: **Is the site occupied by a pair of eagles? Did the pair attempt to nest? How many young survived to fledge from the nest?**

Thank you very much for your help. If you have any questions, please feel free to call Corey Huxoll at 605-773-4195. Please return the completed survey forms to **Corey Huxoll, SD Game, Fish & Parks, 523 East Capitol Ave. Pierre, SD 57501**. E-mail: Corey.Huxoll@state.sd.us

RE: Deuel Harvest Wind Energy LLC Docket EL18-053

I DO NOT SUPPORT Deuel Harvest Wind Energy LLC because:

It is not in alignment with "Deuel County, South Dakota... ORDINANCE B2004-01; dated July 6, 2004... deems it necessary, for the **purpose of promoting the health, safety, and the general welfare of the County, to enact a zoning regulation and to provide for its administration...**"

I DO NOT SUPPORT Deuel Harvest Wind Energy LLC because it is **NOT IN ALIGNMENT WITH THE FOOTPRINT BEING MINIMIZED** per Ordinance B2004-01-23B Section 1215 Wind Energy System (WES) 1215 dated May 23, 2017 Section 2 Setbacks:

These setbacks are too short & do not promote the health, safety, and the general welfare of Deuel County.

Section 2a. Distance should be measured to the property line and not from existing Non-Participating residences and businesses.

Section 6 Footprint Minimization:

"The permittees shall design and construct the WES so as to minimize the amount of land that is impacted by the WES." The Deuel Harvest Wind Energy LLC footprint is not minimized.

Additional Comments:

Property Value will be destroyed, New finding is that banks consider homes in the footprint of a wind farm are High Risk, and refrain from borrowing money to lenders.

Please do not destroy Northeastern South Dakota with these wind farms

Thank You.
