Re: Sweetland Wind Project Wetland Delineation Report

Dear Mr. Wengierski:

Burns & McDonnell Engineering Company, Inc. (Burns & McDonnell) was retained by Sweetland Wind Farm, LLC (Client) to provide wetland delineation services for the proposed Sweetland Wind Project (Project) in Hand County, South Dakota (Figure A-1, Appendix A). The following sections provide information on the proposed Project and summarize the completed wetland delineation.

INTRODUCTION

The Client plans to construct an approximately new 200-megawatt wind farm and associated overhead transmission line and substation in Hand County, South Dakota. The proposed Project would include construction of up to 71 wind turbines, permanent access roads, operations and maintenance facility, up to 3 meteorological towers, electrical power underground collection lines and communication system, a maximum 7-mile 230-kV overhead transmission line, substation, switchyard, and temporary construction areas, such as crane paths, pull sites, laydown yard, and a batch plant. The Project is located approximately 10 miles southeast of Miller, South Dakota.

The Project has the potential to impact wetlands or other water bodies that may be under the jurisdiction of the U.S. Army Corps of Engineers (USACE) as designated by Section 404 of the Clean Water Act. Burns & McDonnell conducted a wetland delineation for the Project to evaluate the presence of wetlands and other water bodies, including streams, drainages, and ponds. The delineation was conducted based on setback buffers applied to the proposed Project layout (Survey Area). Specifically, a 250-foot buffer (500-foot diameter) was applied to each turbine center-point, a 200-foot buffer was applied to each facility footprint, a 100-foot buffer (200-feet wide) was applied to the gen-tie transmission line, a 25-foot buffer (50-feet wide) was applied to the access roads, a 18-foot buffer (36-feet wide) was applied to the crane paths, and a 15-foot buffer (30-feet wide) was applied to the underground collection lines. The Survey Area included in the wetland delineation totaled approximately 862 acres.

METHODS

The following discussions summarize the methods used for the review of existing data and the wetland delineation.

Mark Wengierski
Sweetland Wind Farm, LLC
November 14, 2019
Page 2

Existing Data Review

Burns & McDonnell reviewed available background information for the proposed Project prior to conducting a site visit. This available background information included the 1981 U.S. Geological Survey (USGS) 7.5-minute topographic maps (Vayland Northwest, Vayland, Vayland Southeast, and Wessington Southwest, ND quadrangles), U.S. Fish & Wildlife Service (USFWS) National Wetlands Inventory (NWI) maps, U.S. Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) 2018 Soil Survey Geographic (SSURGO) digital data for Hand County, South Dakota, and 2015 National Agriculture Imagery Program (NAIP) aerial photography. Maps generated from this data are included as Figures A-2 and A-3 in Appendix A. Local climate data for this region was also reviewed to evaluate precipitation conditions.

Wetland presence based only on NWI maps cannot be assumed to be an accurate assessment of potentially occurring jurisdictional wetlands. Wetland identification criteria differ between the USFWS and the USACE. As a result, wetlands shown on an NWI map may not be under the jurisdiction of the USACE, and all USACE-jurisdictional wetlands are not always included on NWI maps. Therefore, a field visit was conducted to identify any wetlands or other water bodies that may be present.

Wetland Delineation Field Survey

A field wetland delineation was completed in June and October 2018, with an additional field delineation in September 2019. These wetland delineations were done in accordance with the 1987 Corps of Engineers Wetlands Delineation Manual and the 2010 Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Great Plains Region – Version 2.0 (Regional Supplement). Sample plots were established at multiple locations, and Wetland Determination Data Forms from the Regional Supplement were completed to characterize the Survey Area (Appendix B). Vegetation, soil conditions, and hydrologic indicators were recorded at each of these sample plots. Locations of sample plots and other identified features were recorded using a sub-meter accurate global positioning system (GPS) unit. Natural color photographs depicting wetlands, streams, and sample plots were taken onsite and are included in Appendix C. Additional photographs were taken during the delineation effort to document onsite conditions where sample plots were not analyzed. Several of these photograph locations that depict representative features, such as open upland pasturelands, swales, and croplands, are indicated on Figure A-4. Additional photographs not depicted on Figure A-4 or provided in Appendix C can be provided upon request.

Based on lack of access and restrictive weather conditions, approximately 15% of the Survey Area was delineated via offsite wetland determination methods, using the background information previously listed. Specifically, wetlands were identified using NWI maps and hydric soil data in conjunction with topography and aerial imagery review to identify locations that

Mark Wengierski
Sweetland Wind Farm, LLC
November 14, 2019
Page 3

exhibited wetland signatures such as wetland vegetation or saturated soils. Streams for these areas were identified using NHD data in conjunction with topography and aerial imagery review. It is recommended that the entire Survey Area be field verified as feasible prior to submitting this report for regulatory review and the start of construction.

RESULTS

The following sections describe the results of the existing data review and the completed wetland delineation.

Existing Data Review

The 2015 NAIP aerial photography indicates that the Survey Area consists largely of rangeland, pastureland, and cropland (Figure A-2.1 through Figure A-2.25).

The 2018 USDA NRCS SSURGO digital data indicate that portions of 25 soil map units are located in the Survey Area. (Figure A-2). Of the 25 soil map units, one map unit is rated hydric, one map unit is rated predominantly hydric, and one map unit is rated partially hydric on local and national hydric soil lists.

The existing USGS topographic maps were reviewed to familiarize Burns & McDonnell wetland personnel with the topography and potential locations of wetlands and other water bodies (Figure A-3). The USGS topographic maps depicts the Survey Area as having large areas of rolling hills and gently sloping to flat topography. Wind turbines for the proposed Project are generally sited on hilltops and ridges, and access roads and underground collection systems connect strings of turbines. Two named streams, Silver Creek and East Pearl Creek, are located within the Survey Area.

The NWI data indicate 69 palustrine emergent (PEM) wetlands and 10 palustrine aquatic bed (PAB) wetlands are located within the Survey Area (Figures A-3).

Wetland Delineation Field Survey

As previously stated, wetland scientists with Burns & McDonnell conducted wetland delineations of the Survey Area in June and October 2018 and September 2019. The second person of each team, a GPS specialist with Burns & McDonnell, recorded the location and extent of features identified within the Survey Area. The land cover and delineated wetlands from the field survey efforts are discussed in detail below.

Vegetation

The Survey Area was largely composed of rangeland and cropland. Typical vegetation in the upland portions of the Survey Area included Kentucky bluegrass (*Poa pratensis*), smooth brome (*Bromus inermis*), and field brome (*Bromus arvensis*).

Mark Wengierski
Sweetland Wind Farm, LLC
November 14, 2019
Page 4

Soils

Typical upland soils ranged from black (10YR 2/1) to very dark grayish brown (10YR 3/2) and ranged in texture from clay loam to silt loam. Redoximorphic features were typically present in wetland soils, but they were less common in upland soils.

Hydrology

Hydrology in the Survey Area has been highly altered to support agricultural practices within croplands. Upland swales are common throughout cropland to aid in draining surface water. Subsurface tiling may be present in many of the croplands, but indicators of such (flagging, inlets, vents, etc.) were not widely observed. Streams have been channelized throughout much of the Survey Area to facilitate farming and ranching practices. The primary source of hydrology for wetlands was precipitation and areas of shallow groundwater. Indicators of hydrology within the wetlands included surface water, high water table, saturation, algal mat or crust, hydrogen sulfide odor, oxidized rhizospheres on living roots, surface soil cracks, drainage patterns, saturation visible on aerial imagery, a concave geomorphic position, and a positive FAC neutral test. Precipitation for the months prior to the field delineations was determined using the Wetland Climate Tables (WETS) analysis. Average precipitation for the Project was obtained from the Miller, SD WETS weather station and used for the WETS analysis. Precipitation levels are provided in Table 1.

Table 1: Precipitation for Three Months Prior to Field Wetland Delineation

Timeframe	Actual Precipitation (inches)	Longterm Average Precipitation (inches)	Actual Relative to Average
June 2018	6.76	3.16	Wetter than normal
October 2018	2.46	1.70	Wetter than normal
September 2019	4.58	1.79	Wetter than normal

Source: Miller, SD Wetland Climate Tables (WETS)

Delineation Areas

During the wetland delineation efforts, 26 wetlands and 24 streams were identified within the Survey Area. The wetlands and streams are generally described below, and their locations are shown on Figure A-4 in Appendix A. Table 2 provides the types and size of each wetland, and Table 3 provides the type and length of each stream delineated. Sample plots were located in the wetlands and adjacent uplands. Data forms and photographs for these sample plots are included in Appendix B and Appendix C, respectively.

Mark Wengierski
Sweetland Wind Farm, LLC
November 14, 2019
Page 5

Wetlands

A total of 26 wetlands, comprised of one wetland type: PEM and encompassing a total of 4.5 acres, were identified (Photograph Log, Appendix C). Dominant vegetation in the PEM wetlands included reed canary grass (*Phalaris arundinacea*), fox-tail barley (*Hordeum jubatum*), common spike-rush (*Eleocharis palustris*), flat-stem spike-rush (*E. compressa*), blunt spike-rush (*E. obtusa*), sedge (*Carex sp.*), common fox sedge (*C. vulpinoidea*), river club-rush (*Schoenoplectus fluviatilis*), rough cocklebur (*Xanthium strumarium*), rush (*Juncus sp.*), American water-plantain (*Alisma subcordatum*), northern water-plantain (*A. triviale*), curly dock (*Rumex crispus*), spotted lady's-thumb (*Persicaria maculosa*), broadleaf cattail (*Typha latifolia*), field meadow-foxtail (*Alopecurus pratensis*), large barnyard grass (*Echinochloa crus-galli*), late goldenrod (*Solidago gigantea*), and freshwater cord grass (*Spartina pectinata*). Wetland hydrology was indicated by surface water, high water table, saturation, algal mat or crust, hydrogen sulfide odor, oxidized rhizospheres on living roots, surface soil cracks, drainage patterns, saturation visible on aerial imagery, a concave geomorphic position, and a positive FAC neutral test. Soils ranged from gray (10YR 6/1) to black (10YR 2/1) in color and clay loam, silty clay loam, or silt loam in texture, with redoximorphic concentrations. Hydric soil was mainly indicated by hydrogen sulfide, 1cm muck, loamy mucky mineral, depleted matrix, redox dark surface, and depleted dark surface.

Streams

A total of 24 streams, consisting of two stream types (intermittent and ephemeral) and equaling 5,118 linear feet, were identified (Photographs, Appendix C). The different stream types are summarized below.

A total of three intermittent streams, extending for a total of 864 linear feet, were identified. Intermittent streams were characterized by the presence of a limited volume of flow at the time of the site visit. This is a likely indicator that the stream is partially fed by groundwater, but it may not flow during dry periods. Intermittent streams ranged from approximately 1.5 to 5 feet wide and approximately 0.5 to 1.0-foot deep from the ordinary high-water mark (OHWM). These streams primarily flowed through agricultural fields and pasture where common riparian vegetation included species such as smooth brome, field brome, fox-tail barley, and rough cocklebur.

Mark Wengierski
Sweetland Wind Farm, LLC
November 14, 2019
Page 7

A total of 21 ephemeral streams, extending for a total of 4,254 feet, were identified. Ephemeral streams were characterized by a defined bed and bank, but they had limited or no flow during the site visit, indicating that these streams largely carry water only during and after precipitation events. Ephemeral streams ranged from approximately 1.5 to 8 feet wide and from 0.5 foot to 3.5 feet deep from the OHWM. These streams flowed through agricultural fields and pasture where common riparian vegetation included species such as smooth brome, red-root (*Amaranthus retroflexus*), yellow bristle grass (*Setaria pumila*), tall false rye grass (*Schedonorus arundinaceus*), clammy ground cherry (*Physalis heterophylla*), rough cocklebur, agricultural soybean (*Glycine max*).

SUMMARY

Burns & McDonnell conducted a wetland delineation of the Survey Area to identify wetlands and other water bodies. A total of 26 wetlands and 24 stream channels were identified. The wetlands and streams identified for this report are subject to federal regulation under the jurisdiction of USACE. Accordingly, Burns & McDonnell recommend this report be submitted to USACE for final jurisdictional review and concurrence. Following the identification of the final Project components, Burns & McDonnell recommends the Client obtain the necessary permits or regulatory authorization prior to initiating land disturbing Project activities.

Sincerely,

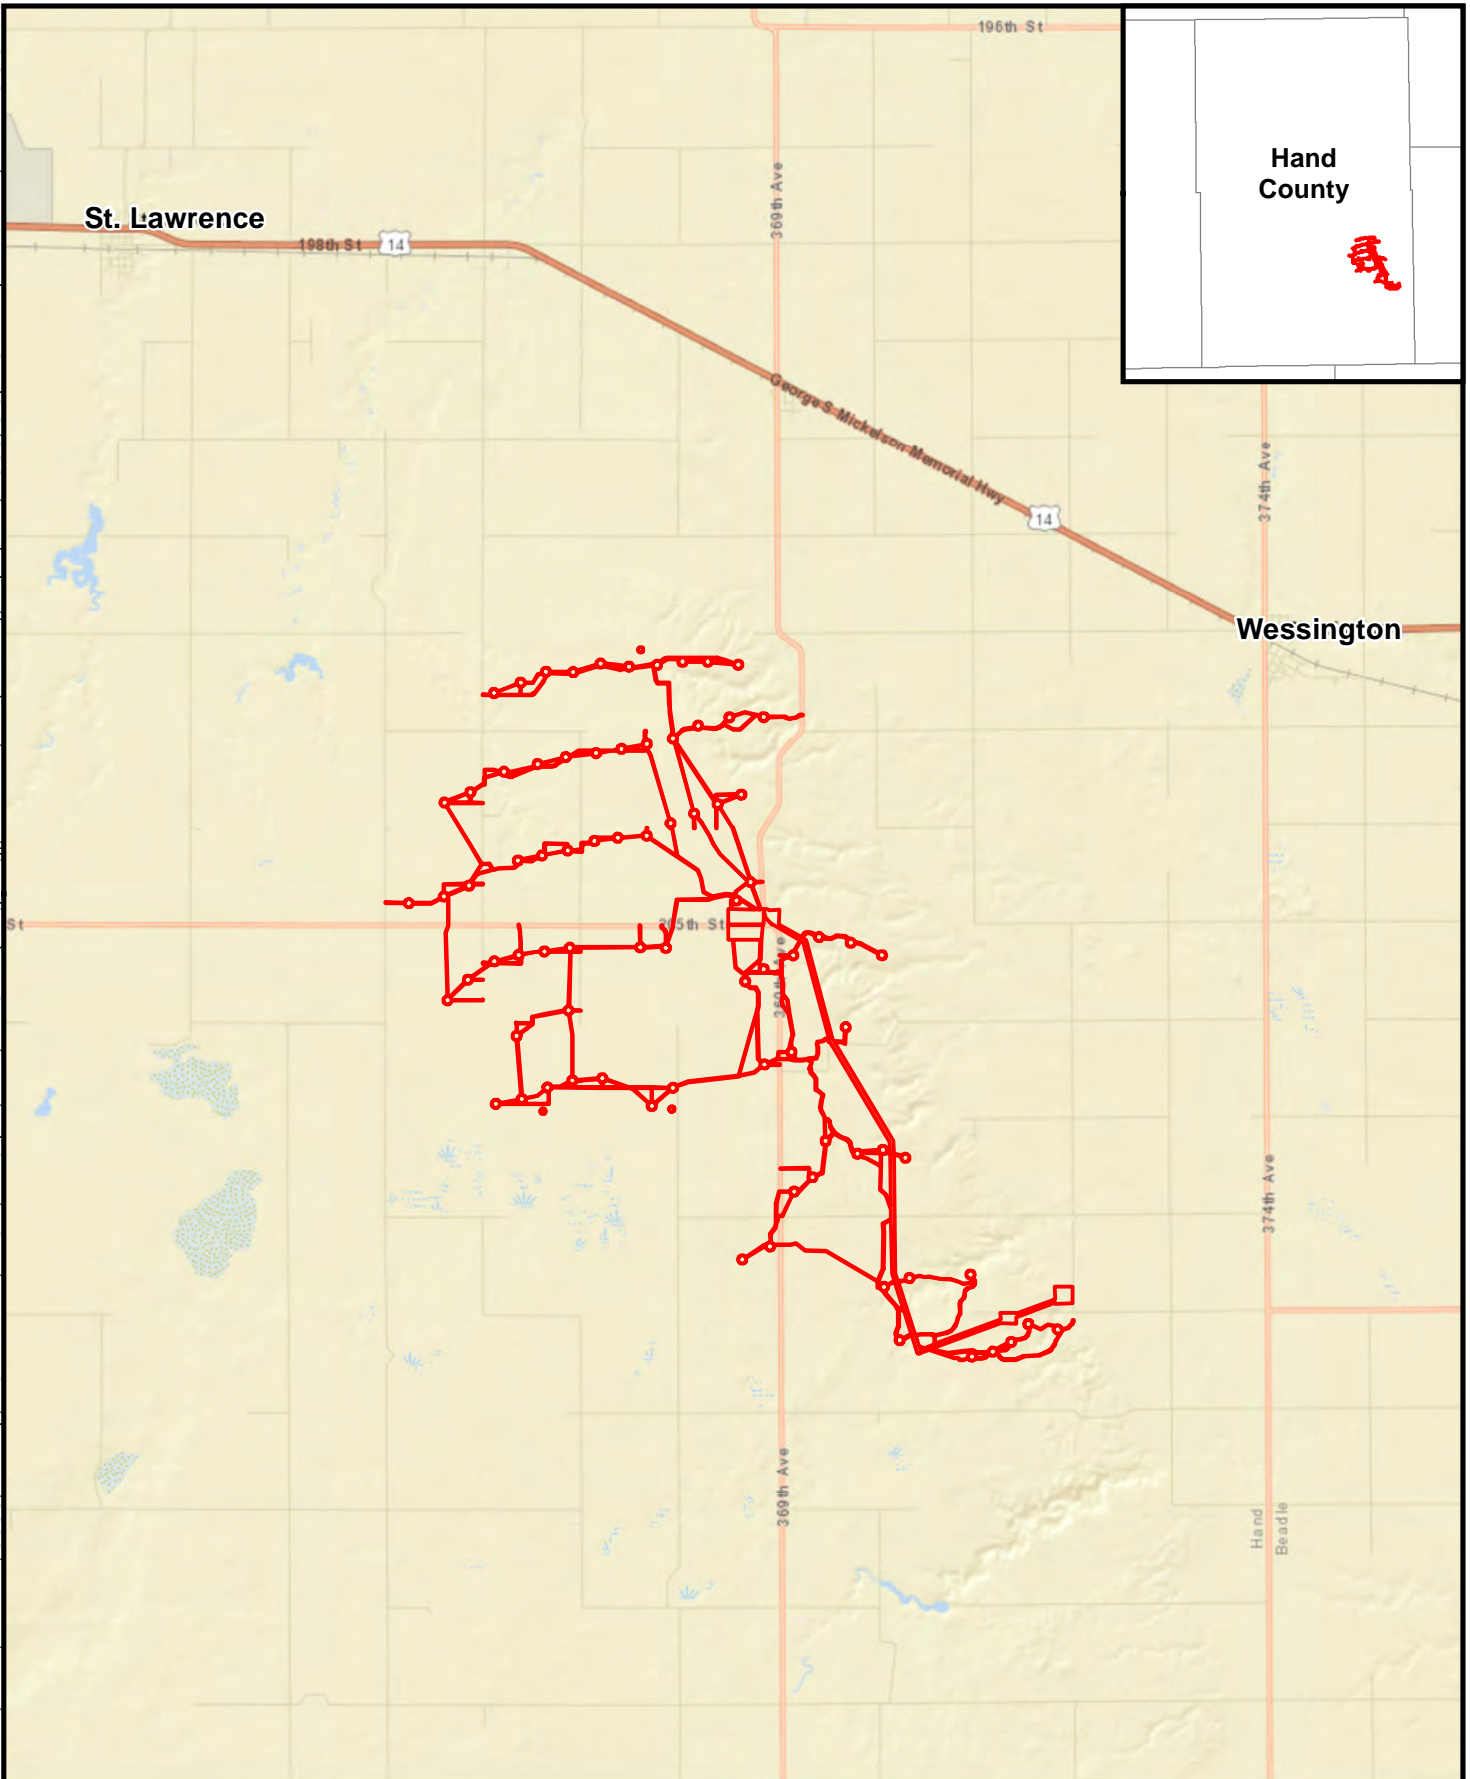

Tyler Beemer, PWS
Senior Environmental Scientist

Hydric Rating by Map Unit

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
BcA	Prosper-Stickney loams, nearly level	5	1.7	0.2%
CaA	Dudley silt loam, nearly level	5	1.7	0.2%
CnA	Cavo-Glenham loams, nearly level	6	4.8	0.6%
HdA	Durrstein-Bon complex, nearly level	62	0.0	0.0%
HhB	Houdek loam, 2 to 6 percent slopes	4	0.9	0.1%
HkA	Houdek-Prosper loams, 0 to 2 percent slopes	3	25.5	3.0%
HkB	Houdek-Prosper loams, 1 to 6 percent slopes	3	3.7	0.4%
HIA	Houdek-Dudley complex, 0 to 2 percent slopes	5	0.6	0.1%
Hv	Hoven silt loam, 0 to 1 percent slopes	100	4.7	0.5%
LIA	Bon loam, channeled, 0 to 2 percent slopes, frequently flooded	9	0.7	0.1%
LnB	Lane loam, gently sloping	1	7.5	0.9%
So	Oahe-Delmont loams, 2 to 6 percent slopes	0	9.4	1.1%
Tp	Tetonka silt loam, 0 to 1 percent slopes	95	12.9	1.5%
W	Water	0	0.3	0.0%
WmB	Glenham loam, undulating	1	108.5	12.6%
WmC	Glenham loam, rolling	1	63.2	7.3%
WnA	Glenham-Prosper loams, 0 to 2 percent slopes	6	49.2	5.7%
WnB	Glenham-Propser loams, 1 to 6 percent slopes	6	322.0	37.4%
WpA	Glenham-Cavo loams, nearly level	10	9.2	1.1%
WpB	Glenham-Cavo loams, undulating	10	48.6	5.6%

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
WxC	Glenham-Java loams, rolling	1	2.5	0.3%
WzC	Glenham-Java loams, rolling	1	84.9	9.9%
ZxE	Betts-Java loams, steep	0	3.0	0.4%
ZyD	Java-Glenham loams, hilly	0	31.6	3.7%
ZyE	Betts-Java loams, steep	0	64.6	7.5%
Totals for Area of Interest			861.6	100.0%

Description

This rating indicates the percentage of map units that meets the criteria for hydric soils. Map units are composed of one or more map unit components or soil types, each of which is rated as hydric soil or not hydric. Map units that are made up dominantly of hydric soils may have small areas of minor nonhydric components in the higher positions on the landform, and map units that are made up dominantly of nonhydric soils may have small areas of minor hydric components in the lower positions on the landform. Each map unit is rated based on its respective components and the percentage of each component within the map unit.

The thematic map is color coded based on the composition of hydric components. The five color classes are separated as 100 percent hydric components, 66 to 99 percent hydric components, 33 to 65 percent hydric components, 1 to 32 percent hydric components, and less than one percent hydric components.

In Web Soil Survey, the Summary by Map Unit table that is displayed below the map pane contains a column named 'Rating'. In this column the percentage of each map unit that is classified as hydric is displayed.

Hydric soils are defined by the National Technical Committee for Hydric Soils (NTCHS) as soils that formed under conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper part (Federal Register, 1994). Under natural conditions, these soils are either saturated or inundated long enough during the growing season to support the growth and reproduction of hydrophytic vegetation.

The NTCHS definition identifies general soil properties that are associated with wetness. In order to determine whether a specific soil is a hydric soil or nonhydric soil, however, more specific information, such as information about the depth and duration of the water table, is needed. Thus, criteria that identify those estimated soil properties unique to hydric soils have been established (Federal Register, 2002). These criteria are used to identify map unit components that normally are associated with wetlands. The criteria used are selected estimated soil properties that are described in "Soil Taxonomy" (Soil Survey Staff, 1999) and "Keys to Soil Taxonomy" (Soil Survey Staff, 2006) and in the "Soil Survey Manual" (Soil Survey Division Staff, 1993).

If soils are wet enough for a long enough period of time to be considered hydric, they should exhibit certain properties that can be easily observed in the field. These visible properties are indicators of hydric soils. The indicators used to make onsite determinations of hydric soils are specified in "Field Indicators of Hydric Soils in the United States" (Hurt and Vasilas, 2006).

**APPENDIX B - ROUTINE WETLAND DETERMINATION DATA FORMS,
GREAT PLAINS REGION**

WETLAND DETERMINATION DATA FORM – Great Plains Region

Project/Site: Sweetland Wind Project City/County: Hand County Sampling Date: 6/25/2018
 Applicant/Owner: Sweetland Wind Farm, LLC State: SD Sampling Point: SP-008
 Investigator(s): R. Williams; A. Woehler Section, Township, Range: S3, T110N, R66W
 Landform (hillslope, terrace, etc.): toeslope Local relief (concave, convex, none): none Slope (%): 5 %
 Subregion (LRR): Northern Great Plains Spring Wheat Region Lat: 44.355968 Long: -98.756745 Datum: NAD83
 Soil Map Unit Name: Glenham-Java loams, rolling NWI Classification: NA

Are climate/hydrologic conditions on the site typical for this time of year?

☒ Yes ☐ No (If no, explain in Remarks)

Vegetation Soil Hydrology

Are "Normal Circumstances" present? ☒ Yes ☐ No

Significantly Disturbed? ☐

☐

☐

☐

Naturally Problematic? ☐

☐

☐

☐

(If needed, explain any answers in Remarks)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

	Yes	No	Remarks:
Hydrophytic Vegetation Present?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Upland confirmation plot adjacent to PEM W-004.
Hydric Soil Present?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Wetland Hydrology Present?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Is the Sampled Area within a Wetland?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	

VEGETATION – Use scientific names of plants

| <input type="checkbox"/> Water-Stained Leaves (B9) | |

Secondary Indicators (2 or more required)

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface (B8)
- ☐ Drainage Patterns (B10)
- ☐ Oxidized Rhizospheres on Living Roots (C3)
(where tilled)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ FAC-Neutral Test (D5)
- ☐ Frost-Heave Hummocks (D7) (**LRR F**)

Field Observations:

	Yes	No	Depth (inches)
Surface Water present?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
Water Table present?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
Saturation Present? (includes capillary fringe)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
Wetland Hydrology Present?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, etc.), if available:

Remarks: No hydrology indicator present.

WETLAND DETERMINATION DATA FORM – Great Plains Region

Project/Site: Sweetland Wind Project City/County: Hand County Sampling Date: 6/25/2018
 Applicant/Owner: Sweetland Wind Farm, LLC State: SD Sampling Point: SP-518
 Investigator(s): T. Beemer, W. Hirst Section, Township, Range: S6, T111N, R66W
 Landform (hillslope, terrace, etc.): depression Local relief (concave, convex, none): concave Slope (%): 0 %
 Subregion (LRR): Northern Great Plains Spring Wheat Region Lat: 44.443892 Long: -98.818880 Datum: NAD83
 Soil Map Unit Name: Glenham-Propser loams, 1 to 6 percent slopes NWI Classification: PEM1A
 Are climate/hydrologic conditions on the site typical for this time of year? ☒ Yes ☐ No (If no, explain in Remarks.)

Vegetation Soil Hydrology Are "Normal Circumstances" present? ☒ Yes ☐ No
 Significantly Disturbed? ☐ ☐ ☐ (If needed, explain any answers in Remarks.)
 Naturally Problematic? ☐ ☐ ☐

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

- ☐ Surface Soil Cracks (B6)
- ☐ Sparsely Vegetated Concave Surface (B8)
- ☐ Drainage Patterns (B10)
- ☐ Oxidized Rhizospheres on Living Roots (C3)
(where tilled)
- ☐ Crayfish Burrows (C8)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☒ Geomorphic Position (D2)
- ☒ FAC-Neutral Test (D5)
- ☐ Frost-Heave Hummocks (D7) (**LRR F**)

Field Observations:

	Yes	No	Depth (inches)
Surface Water present?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
Water Table present?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
Saturation Present? (includes capillary fringe)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	8
Wetland Hydrology Present?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, etc.), if available:

Remarks: Wetland hydrology indicators D2 and D5 present. Although saturation was observed at a depth of 8 inches, an accompanying water table was not observed. Therefore, indicator A3 is not met.

WETLAND DETERMINATION DATA FORM – Great Plains Region

Project/Site: Sweetland Wind Project City/County: Hand County Sampling Date: 6/26/2018
 Applicant/Owner: Sweetland Wind Farm, LLC State: SD Sampling Point: SP-536
 Investigator(s): T. Beemer, W. Hirst Section, Township, Range: S23, T111N, R67W
 Landform (hillslope, terrace, etc.): drainage Local relief (concave, convex, none): concave Slope (%): 2 %
 Subregion (LRR): Northern Great Plains Spring Wheat Region Lat: 44.409783 Long: -98.853713 Datum: NAD83
 Soil Map Unit Name: Water NWI Classification: PABFh
 Are climate/hydrologic conditions on the site typical for this time of year? ☒ Yes ☐ No (If no, explain in Remarks.)

Vegetation Soil Hydrology Are "Normal Circumstances" present? ☒ Yes ☐ No
 Significantly Disturbed? ☐ ☐ ☐ (If needed, explain any answers in Remarks.)
 Naturally Problematic? ☐ ☐ ☐

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

	Yes	No	Remarks: Wetland sample plot located in PEM W-518.

Wetland Hydrology Present?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, etc.), if available:

Remarks: Wetland hydrology indicators A1, A2, A3, B10, D2 and D5 present.

WETLAND DETERMINATION DATA FORM – Great Plains Region

Project/Site: Sweetland Wind Project City/County: Hand County Sampling Date: 6/27/2018
 Applicant/Owner: Sweetland Wind Farm, LLC State: SD Sampling Point: SP-539
 Investigator(s): T. Beemer, W. Hirst Section, Township, Range: S20, T111N, R66W
 Landform (hillslope, terrace, etc.): hillslope Local relief (concave, convex, none): convex Slope (%): 10 %
 Subregion (LRR): Northern Great Plains Spring Wheat Region Lat: 44.411369 Long: -98.790267 Datum: NAD83
 Soil Map Unit Name: Betts-Java loams, steep NWI Classification: NA
 Are climate/hydrologic conditions on the site typical for this time of year? ☒ Yes ☐ No (If no, explain in Remarks.)

Vegetation Soil Hydrology Are "Normal Circumstances" present? ☒ Yes ☐ No
 Significantly Disturbed? ☐ ☐ ☐ (If needed, explain any answers in Remarks.)
 Naturally Problematic? ☐ ☐ ☐

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

	Yes	No	Remarks: Upland sample plot adjacent to PEM W-520.

Field Observations:

	Yes	No	Depth (inches)
Surface Water present?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
Water Table present?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
Saturation Present? (includes capillary fringe)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
Wetland Hydrology Present?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, etc.), if available:

Remarks: No wetland hydrology indicators are present.

WETLAND DETERMINATION DATA FORM – Great Plains Region

Project/Site: Sweetland Wind Project City/County: Hand County Sampling Date: 10/16/2018
 Applicant/Owner: Sweetland Wind Farm, LLC State: SD Sampling Point: SP-612
 Investigator(s): T. Beemer, W. Hirst Section, Township, Range: S32, T111N, R66W
 Landform (hillslope, terrace, etc.): swale Local relief (concave, convex, none): concave Slope (%): 5 %
 Subregion (LRR): Northern Great Plains Spring Wheat Region Lat: 44.384156 Long: -98.792923 Datum: NAD83
 Soil Map Unit Name: Glenham loam, undulating NWI Classification: PEM1Ad
 Are climate/hydrologic conditions on the site typical for this time of year? ☒ Yes ☐ No (If no, explain in Remarks.)

Vegetation Soil Hydrology Are "Normal Circumstances" present? ☒ Yes ☐ No
 Significantly Disturbed? ☐ ☐ ☐ (If needed, explain any answers in Remarks.)
 Naturally Problematic? ☐ ☐ ☐

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

	Yes	No	Remarks: Upland sample plot.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections, etc.), if available:

Remarks: No wetland hydrology indicators are present.

WETLAND DETERMINATION DATA FORM – Great Plains Region

Project/Site: Sweetland Wind Project City/County: Hand County Sampling Date: 9/30/2019
 Applicant/Owner: Scout Clean Energy State: SD Sampling Point: SP-903
 Investigator(s): W. Hirst Section, Township, Range: S10, T110N, R66W
 Landform (hillslope, terrace, etc.): hillslope Local relief (concave, convex, none): convex Slope (%): 5 %
 Subregion (LRR): Northern Great Plains Spring Wheat Region Lat: 44.354380 Long: -98.753991 Datum: NAD83
 Soil Map Unit Name: Glenham-Java loams, rolling NWI Classification: NA
 Are climate/hydrologic conditions on the site typical for this time of year? ☐ Yes ☒ No (If no, explain in Remarks.)

Vegetation Soil Hydrology Are "Normal Circumstances" present? ☒ Yes ☐ No
 Significantly Disturbed? ☐ ☐ ☐ (If needed, explain any answers in Remarks.)
 Naturally Problematic? ☐ ☐ ☐

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

	Yes	No	Remarks: Upland sample plot. WETS analysis for this region shows prior 3 month period has been wetter than normal for this time of year.
