Comments: Black Hills Energy wants to change the Tariff rate it charges to customers who use private wind or solar to generate power. "Black Hills Energy says it would not discourage renewable energy generation and says they support the expansion of renewable energy in the region." C. Matteson KOTA Clearly this is an effort to stop most if not all people from installing renewable forms of energy. The reason I believe they are not going after those who have already installed solar or wind is that they would end up in a massive suit to pay for the cost of installing these private generating plants as well as the future loss to these people. It would be tens of millions. No one can afford to install these solar or wind plants without getting a substantial benefit from it. This company is in my opinion is attempting to stop all future efforts of people who want to use our public grid to help them utilize renewable energy. Please do not allow any of this to happen. Please think of the future of this nation and what these individuals are working to fix. Thank you
