Subject: [EXT] Black Hills Power application to amend tariff

Good Day

My name is Dave Hintz, and I have concerns about the application that Black Hills Power has sent the PUC to amend the tariff for power generation "behind" the meter.

While I am highly appreciative of Black Hills Power and their linemen for providing safe and reliable power during all types of weather situations, I feel that they are overstepping their boundaries when trying to dictate how, or what, I can do on my property. If I choose to put solar panels on my roof to assist with power generation, or those in rural areas erect a windmill for the same purpose, should not have to suffer any economic repercussions from Black Hills Power because of their decision to do what they wish on their property.

Respectfully,

Dave Hintz
