

- 1) Please provide legends for Exhibit A and Exhibit B. The legend should clearly identify the different line colors on the maps.
  
- 2) Referring to the electric service territory exchange in Section 34, T01N, R08E:
  - a. Please explain why the developer and owner requested to be served by BHEC. **Black Hills Electric Cooperative currently serves the majority of the Morris property and has infrastructure on the property all ready. The current infrastructure works well with the master plan of the new development. It would be most economical for the Morris's to have Black Hills Electric serve the property.**
  
  - b. Is it more economical and efficient to the system as whole for BHEC to serve the are to be exchanged? Please explain. **Black Hills Electric currently has infrastructure on the property line in question and West River would have to construct additional facilities across the highway. The current territory line is a section line, and we are proposing to move the territory line to Old Folsom Road. Old Folsom Road makes the most sense for the new territory line, West River Electric currently serves the east side and Black Hills would serve the west side of Old Folsom Road. This territory change would also allow West River Electric to acquire territory that they are currently serving frozen customers.**
