Subject: [EXT] Docket EL26-026

If this power is used by Minnesota customers and Big Stone is right on the border why is our great state of SD even being considered. Ever stop and think it is because Minnesota already has some smaller lines that are causing issues and they sure don't want these larger ones. These lines need to be installed where the power will be used. I also heard that they don't want to put them underground because they lose to much power well what the hell do they think happens to the lost power above ground. Think about it.

Also from a cost point, the more direct the power from source to target the less it costs. Why would you want to add 69.69 miles of transmission lines from Big Stone Power plant to highway 14 when you can just cross the border into Minnesota.

Thank you.

Land has been in our family over a century!! Don't want to see all the hard work put into it over the years depreciated by something that is NOT needed or WANTED.
