NO! to the TransCanada Pipeline.

We eat the crops off the land and we drink the water. We do not want our food and water supply contaminated!!

I do not want the TransCanada Pipeline running through my property. The land has been in my family for around 100 years. We are not strong supporters of chemical use on our land and we do not want TransCanada pipeline contaminating the land with any potential leaks. I would like to keep the land chemical free to pass on to the generations after me.

I am also concerned about the shelterbelts that were planted 3 years ago. How many tree will be destroyed before the pipeline will be in place. A few years down the road TransCanada will decide the tree roots are interfering with their pipeline and how many more trees will be destroyed.

Will they replace the trees that are taken out for their line?? Keep the pipeline OFF my property!

Also, should I ever decide to sell the land, I am afraid it will not bring top price if bidders know their is a crude oil line underground. No one knows if there is an undetected leak underground. How long would the leak seep underground before it is detected!
