SOUTH DAKOTA PUBLIC
UTILITIES COMMISSION

Honorable Public Utilities Commissioner

The CO² pipeline plan is unconstitutional, both Federal and state. Eminent Domain is not to be used for the profit of any private company regardless of how many politicians have invested in the company or are receiving kickbacks from the companies involved. The lobbyists are related to too many of the investors or kickback recipients.

Private landowners should not be at the mercy of any private business. They also should be able to protect their land, family and livestock from a possible leak and explosion. If you do not realize, CO² is a heavy gas and if released will settle and kill everything it touches, including people, their livestock and the crops! In case of an explosion - hundreds of lives are at stake -

God made the perfect plan of natural release of carbon dioxide for plants which in turn provide oxygen for people and animals. Man should never interfere with God's Plan -
