

To: South Dakota Public Utilities Commission

RE: Docket No. HP22-001

I support the capture, transportation, and storage of carbon because it is the future of ethanol and the ag industry. Current projects that would allow for carbon to be captured, transported, and stored are incredibly important and will:

- Protect our ag economy by making sure farmers continue to have a market for the corn they produce
- Support more than half of corn grown in the Upper Midwest
- Create more than 10,000 high-quality jobs during construction
- Support over a thousand jobs once operational
- Generate hundreds of million in Federal, State & Local taxes during construction as well as nearly a hundred million in new tax revenue once operational
- Remove millions of tons of carbon dioxide per year while providing families access to low carbon fuel

It's time to approve this project.

Sincerely,
