PUC.

My name is Bob Fitch. The proposed carbon pipe line will pass about 500 feet east of my home in Lincoln County. I am very much opposed to construction of this pipe line.

I feel it is very unsafe. A leak even a small one would be devastating to anyone nearby, causing sickness or even death within an extremely short amount of time.

There are legitimate commercial uses for CO2. I think if there were not massive government subsidies involved, this project would never have gotten off the ground. Someone in Washington wants to appear to be doing something to help with our climate crisis but this is not the answer.

When you vote please consider how you would feel if this dangerous pipe line was located within 500 feet of your own front door.

Thank you for your public service.

Respectfully,

Bob Fitch
