South Dakota First Data Requests NG16-011

- 1-1. Provide additional information regarding the customer looking to inject biogas into MidAmerican's gas distribution system for transport to third-party buyers. This could include, but is not limited to, whether the customer is a current natural gas customer of MidAmerican, what type of facility the customer has or plans to construct that will produce renewable gas, the projected volume of renewable gas that will be entering MidAmerican's system, and the projected timeline of when the renewable gas will be entering the system.

Response:

The customer looking to inject renewable gas into MidAmerican's system is currently a MidAmerican customer that produces renewable gas for its own consumption. Instead of consuming the gas, the renewable gas will be injected into MidAmerican's system. A project design, volume and timeline has not been determined at this time.
