

Pre-filed Direct Testimony and Exhibits  
Jeffrey J. Decker

In the Matter of the Application of  
NorthWestern Energy Public Service Corporation, d/b/a NorthWestern Energy

For Authority to Increase Natural Gas Utility Rates  
in South Dakota

Docket No. NG24-\_\_\_\_\_

June 21, 2024

## TABLE OF CONTENTS

Witness Information.....	1
Pro Forma Adjustments – Operating Income Statement.....	2
Class Cost of Service Study.....	8
Rate Design and Proposed Rates.....	12
Changes to the General Terms and Conditions .....	18

## EXHIBITS

South Dakota Heating Degree Days	Exhibit JJD-1
Management Fee Calculation	Exhibit JJD-2 Confidential
Contract with Deviation Revenue	Exhibit JJD-3 Confidential
Rate 87 Milbank Demand Rate	Exhibit JJD-4 Confidential
Released Capacity Surcharge	Exhibit JJD-5 Confidential

1 **Witness Information**

2 **Q. Please state your name and business address.**

3 **A.** My name is Jeffrey J. Decker and my business address is 600 Market St W.,  
4 Huron, South Dakota 57350.

5  
6 **Q. By whom are you employed and in what position?**

7 **A.** I am employed by NorthWestern Energy Public Service Corporation d/b/a  
8 NorthWestern Energy (“NorthWestern” or “Company”) as a Lead Regulatory  
9 Specialist.

10  
11 **Q. Please describe your education and business experience and business  
12 credentials.**

13 **A.** I graduated in 1986 from Dakota Wesleyan University with a Bachelor of Arts  
14 degree in Business Administration. I joined NorthWestern Public Service in 1988  
15 as a corporate accountant working with financial reporting. Starting in 1993, I  
16 worked with NorthWestern Growth Corporation. My responsibilities included  
17 financial analysis of potential acquisitions. In 1995, I became the director of  
18 rates. I was promoted to Manager of Financial Services – NEC in 1998. In  
19 2004, my title was changed to Specialist Regulatory for NorthWestern Energy. In  
20 2023, I was promoted to Lead Regulatory Specialist. Since 1996, I have been  
21 responsible for developing the NorthWestern’s natural gas revenue budgets for  
22 South Dakota and Nebraska. I also maintain and analyze heating degree day  
23 data for both states on a monthly basis.

1 **Q. What is the purpose of your testimony in this proceeding?**

2 **A.** I support the revenue adjustments, revenue requirement, cost of service study,  
3 and the rate design changes to the applicable tariff schedules. In addition, I  
4 explain a proposed new Rate 89 tariff to serve the large transport customers and  
5 support some minor changes to the Rate 87 transportation general terms.

6

7 **Pro Forma Adjustments – Operating Income Statement**

8 **Q. Please refer back to Statement M-1. Would you please explain each**  
9 **individual pro forma adjustment to the operating income statement?**

10 **A.** I will address adjustments 1 through 6. Witness Jeffrey B. Berzina will address  
11 the remaining adjustments in his testimony.

12

13 ***Adjustment No. 1 – Weather Normalization***

14 Details and calculation of this adjustment are shown on Statement I-1, pages 1  
15 and 2. The adjustment is the total of column f, rows 17 and 25 on page 2. This  
16 adjustment decreases the revenue requirement by \$60,773. As shown on  
17 Schedule M-1, the natural gas costs associated with this adjustment total  
18 \$49,020, resulting in a margin impact of \$11,753. This adjustment determines  
19 the natural gas supply cost adjustments using weather normalized sales  
20 requirements and the cost component of each rate schedule. The Purchased  
21 Gas Cost rate used in this filing was the average natural gas cost rate for the test  
22 period.

23

24 NorthWestern has made certain adjustments to base year volumes in

1 determining test year volumes. The upward adjustment to base year volumes  
2 delivered to retail customers is primarily the result of slightly warmer than normal  
3 weather in the base year. Heating degree days during the base year were  
4 approximately 99.87 percent of normal, as shown on Exhibit JJD-1. In summary,  
5 NorthWestern divided actual base year volumes into temperature sensitive and  
6 non-temperature sensitive volumes. The non-temperature sensitive volume was  
7 determined using the July and August 2023 volumes in the base period.  
8 NorthWestern then calculated the temperature sensitive volume for the year by  
9 subtracting the non-temperature sensitive volume from the total volume. The  
10 temperature sensitive volumes are normalized in a linear manner adjusting the  
11 base period temperature sensitive volumes by the ratio of historical normal  
12 heating degree days to the actual heating degree days matched to billing cycles  
13 during the twelve months ended December 31, 2023.

14  
15 This method calculates a normalization factor by taking the sum of the monthly  
16 heating degree-day normals and dividing them by the sum of the monthly  
17 degree-day actuals. NorthWestern calculated heating degree-days for actual  
18 and normal on a billing cycle basis to provide a better match with revenues.  
19 NorthWestern then applied this normalization factor to actual annual sales (less  
20 base load sales) to either decrease actual sales if it is colder than normal or  
21 increase sales if it is warmer than normal. The National Oceanic and  
22 Atmospheric Administration reported the normal and actual heating degree-days.  
23 The monthly normal heating degree days are based on a thirty-year average for  
24 the period of 1991-2020, and the adjustment uses the Huron weather service

1 actual and normal heating degree data. Huron is located close to the center of  
2 our service territory and represents a reasonable average of the weather  
3 affecting our customers.

4  
5 ***Adjustment No. 2 – Book to Bill***

6 NorthWestern made this adjustment to the actual revenues booked during the  
7 test year to account for the variance between booked revenues and billed  
8 revenues in the test year. The reason that the booked and billed revenues differ  
9 is because of situations where there are pro-rated billing cycles, account close-  
10 outs, meter misreads, and out-of-period adjustments that ultimately affect the  
11 amount of revenues booked by the Company versus the revenues billed. This is  
12 a test year revenue adjustment that decreases test year revenues to the billed  
13 revenue amount at current rates, and thus eliminates the need for the booked-to-  
14 billed revenue ratio in rate design. The billed revenues were determined based  
15 on the test year billing determinants for each rate element multiplied by the tariff  
16 rates in effect during the test year. This adjustment decreases operating  
17 revenues by approximately \$37,820, as shown on Schedule I-1, page 3.

18  
19 ***Adjustment No. 3 – Remove Management Fee Income***

20 Adjustment 3 represents the removal of the annual management fee income that  
21 NorthWestern received from several large transport customers. The management  
22 fee income is based on the Federal Energy Regulatory Commission (“FERC”)  
23 method of calculating a return for a large customer whose rate base dollars have  
24 been previously recovered. NorthWestern has referenced this method in multiple

1 contract with deviation filings that it has made with the South Dakota Public  
2 Utilities Commission (“SDPUC”) over the last 10 years. The management fee  
3 represents the return to NorthWestern for serving this group of customers.  
4 Without the removal of the fee income, NorthWestern would give back all returns  
5 from these customers to the existing customer base through the cost of service  
6 and NorthWestern’s shareholders would be left without a return for serving these  
7 customers. Removing this income provides the intended return to the Company  
8 from this group of customers. The calculation for the adjustment of \$89,045 is  
9 shown on Exhibit JJD-2 Confidential.

10  
11 ***Adjustment No. 4 – Contract Renewal Revenue Change***

12 Adjustment 4 reduces revenue for changes in contracted rates for the test year  
13 compared to the base year. Revised rates from contracts that went into effect  
14 during the test year of 2023 make up this adjustment. NorthWestern filed each  
15 adjustment as a contract with deviation filing in 2023. Row 39 of Exhibit JJD-3  
16 Confidential, Sch 2.1a, pages 3, 4, 5 and row 40 of page 10 provide the detailed  
17 changes (test year revenue at present rates less base year revenue) that total this  
18 \$32,366 revenue reduction. The lines on pages 3, 4 and 10 stated above also  
19 include management fee income reduction of \$35,888. This should be subtracted  
20 from the differences on pages 3, 4 and 10 in order to represent the contract  
21 renewal revenue change.

22  
23 ***Adjustment No. 5 – New Customer Revenue***

24 Adjustment 5 increases revenue for new customers served under Contract with

1 Deviation who began service or increased usage during 2023. Row 40 of Exhibit  
2 JJD-3 Confidential, Sch 2.1a, page 13 provides the detail change for the  
3 adjustment of an increase to revenue of \$40,549.  
4

5 ***Adjustment No. 6 – Manufactured Gas Plant (“MGP”) Cost Reduction***

6 In Docket No. NG11-003, the SDPUC approved base rates that included the  
7 recovery of costs associated with the MGP site in Aberdeen. Since that time,  
8 system sales volumes have increased, resulting in higher recoveries. Additionally,  
9 remediation costs for this site have substantially declined. In 2016, the Company  
10 sought approval for a refund plan, which the SDPUC granted in Docket No. NG16-  
11 010. This allows the Company to refund the amount collected in base rates for  
12 remediation costs above what it spent. The SDPUC has approved this refund plan  
13 annually since 2016. During the 2023 test year, revenue recoveries totaled  
14 \$2,174,459, which NorthWestern offset in full by regulatory amortization of  
15 \$2,174,459.  
16

17 Statement I-1 provides a comparison of the 5-year historical expense and the 5-  
18 year forecasted expense for the Aberdeen site. Arcadis, whom the Company has  
19 hired to monitor the MGP sites and estimate future costs, provided the forecast  
20 numbers. The 2024 forecast amount was not included due to it being significantly  
21 higher than the forecast for the years that new rates will be in effect. Based on the  
22 2025 – 2029 forecasted annual expense of \$355,000, the annual reduction to  
23 revenue and regulatory debits/credits is \$1,819,459. Statement I-1, page 5,  
24 provides the detail behind this adjustment.

1 The Company previously had an MGP tracker, as ordered in Docket No. NG96-  
2 015. NorthWestern recovered the remediation costs via a separate charge in the  
3 tariff and the recovery of such costs was not included in base rates. In Docket No.  
4 NG07-013, the costs were moved into base rates, with the stipulation that costs  
5 and recovery continue to be tracked with the over-recovered balance owed to  
6 customers, with interest. As part of this filing, NorthWestern is proposing to move  
7 the MGP recovery out of base rates and again into its own tracker. The current  
8 process of collecting revenue in base rates, tracking actual expenditures, and then  
9 refunding the difference is functioning as a tracker, but with the limitations of  
10 having a locked in recovery amount through base rates that is significantly higher  
11 than necessary, resulting in significant over-recovered balances. Given the  
12 changes in recovery since the 2011 rate review, establishing a separate tracker  
13 rate will be a prudent means of recovering this cost from customers while  
14 eliminating the administrative burden on the SDPUC and the Company with  
15 annual refund filings.

16  
17 To accomplish this change, a separate tariff sheet will contain the recovery rate  
18 applicable to customers. NorthWestern will continue to track monthly the actual  
19 costs and recoveries with interest applied to the over- or under-collected position  
20 at a rate equal to the approved return on rate base from this proceeding. There  
21 will be a separate line item on the bill for MGP recovery. NorthWestern will revise  
22 the rate each month and filed alongside the Purchased Gas Adjustment and Ad  
23 Valorem tracker recovery filings. The actual costs tracked will include all South  
24 Dakota MGP sites, in addition to the Aberdeen site, that NorthWestern is

1 monitoring. As of this date, sites in Woonsocket, Mitchell, and Yankton have  
2 incurred remediation costs totaling \$94,929. With this filing, NorthWestern asks  
3 for the approval to recover those costs as part of the recovery tracking of MGP site  
4 costs. NorthWestern is proposing the balance be moved into the MGP  
5 recovery/expense account. NorthWestern also seeks clarity on whether future  
6 costs can automatically be recovered through the MGP recovery mechanism.

### 8 **Class Cost of Service Study**

9 **Q. What is the basis for the class cost of service study contained in the**  
10 **required Statement N?**

11 **A.** NorthWestern based the study on South Dakota jurisdictional operations for the  
12 twelve-month period ending December 31, 2023, as adjusted for known and  
13 measurable changes. The revenue requirement study previously mentioned  
14 provides the operating income and rate base numbers used in the cost of service  
15 study.

17 **Q. What is the purpose of a class cost of service study?**

18 **A.** A class cost of service study is an allocation to each rate schedule or class of  
19 customers of all revenues and costs relative to furnishing the utility service,  
20 including appropriate assignment of revenues, operations and maintenance  
21 (“O&M”) expenses, depreciation, and other cost elements.

23 **Q. Would you briefly describe the steps involved in preparing a class cost of**  
24 **service study?**

1 **A.** NorthWestern examined the utility plant, revenue, and expense accounts and,  
2 where possible, amounts are assigned directly to certain classes of service or  
3 customers, based on details derived from the books and records of the utility or  
4 by special analysis and studies. Amounts not directly assigned are analyzed by  
5 functional responsibility and groupings of accounts, such as production and  
6 distribution, and then NorthWestern allocated on the basis of demand, energy  
7 use, and the number of customers associated with the various functional  
8 responsibilities.

9

10 **Q. How would you describe your overall approach to the cost allocation**  
11 **study?**

12 **A.** This cost allocation study utilizes the methods employed in Docket Nos. NG99-  
13 002, NG07-013, and NG11-003. As a result, the 2023 study applies cost  
14 allocation principles in a manner consistent with previous studies approved by  
15 the SDPUC.

16

17 **Q. How did NorthWestern define classes for the purpose of the class cost of**  
18 **service study?**

19 **A.** There are three service classes used for this class cost of service study:  
20 residential (Rate No. 81 – Residential Gas Service); small commercial (Rate No.  
21 82 – General Gas Service); and large commercial (Rate Nos. 84 & 85 for sales  
22 service, Rate No. 86 customers, and Rate No. 87 for transportation service).  
23 Rates for large commercial accounts are offered under either an Option A or B.  
24 Option A service is currently chosen by large commercial accounts generally

1 using less than 80,000 therms per year. This service rate option carries a  
2 smaller customer charge than Option B service; however, the non-gas  
3 commodity charge is approximately \$0.03 per therm higher.  
4

5 **Q. Discuss the principal classification and allocations used in Statement O.**

6 **A.** Pages 5 and 6 contain the development of the classification ratios of cost for  
7 customer, demand or commodity, while the allocation ratios to customer class  
8 are shown on pages 7 and 8. Demand-related costs are those that relate to the  
9 utility's ability to meet and sustain the maximum gas flow required by customers.  
10 On NorthWestern's system, these days occur when it is extremely cold.  
11 Demand-related costs relate to the capacity that NorthWestern must build into  
12 the system to meet peak operating conditions. NorthWestern allocates the  
13 demand-related costs on the basis of the January 2023 volumetric requirements  
14 for each of the classes.  
15

16 **Q. How were most of the other distribution costs allocated?**

17 **A.** NorthWestern allocated the costs associated with meters, services, and  
18 regulators based on the number of customers, adjusted to account for  
19 differences in cost for the size of customer. In general, NorthWestern allocated  
20 expenses based on the plant to which they relate. NorthWestern allocated  
21 supervision and engineering expenses on the basis of the other related O&M  
22 accounts while customer accounting expenses were allocated on the basis of  
23 weighted customer counts. NorthWestern generally allocated administrative and  
24 general costs, including common plant investment, in proportion to the allocation

1 of distribution and production plant investment and expenses.

2  
3 **Q. What are the results of the class cost of service study?**

4 **A.** Statement O, pages 2 and 3 summarize the results. Page 3 of the study shows,  
5 based on pro forma results at present rates, the following rates of return by class  
6 of customer:

7

8 Residential	3.35%
9 Small Commercial	2.73%
10 Large Commercial	1.80%

11

12 The level of revenue requirement needed by each customer class to attain the  
13 overall rate of return of 7.75% requested by NorthWestern in this filing is shown  
14 on page 2 of the study.

15  
16 **Q. What are the principle conclusions you reach from your study?**

17 **A.** Based on results of this study, I find that existing natural gas revenues fail to  
18 cover South Dakota natural gas jurisdictional revenue requirements by just over  
19 \$6 million.

20  
21 **Q. What are the revenue deficiency amounts by class of customer and the  
22 percentage increase in non-gas cost revenue required?**

23 **A.** These amounts and percentage increases are as follows:  
24

1	Residential	\$2,826,425	or	26.69% Increase
2	Small Commercial	1,153,133	or	35.07% Increase
3	Large Commercial	<u>2,063,665</u>	or	32.89% Increase
4	Total	<u>\$6,043,223</u>	or	29.99% Increase

5

6 **Q. What are the revenue deficiency amounts by class of customer and the**  
7 **percentage increase in non-gas cost revenue required, when comparing to**  
8 **the total billed revenue?**

9 **A.** The amount of revenue deficiencies by class of customers are the same as  
10 reflected in the prior answer. The percentage increases compared to total billed  
11 revenue are as follows:

12

13	Residential	7.95% Increase
14	Small Commercial	6.29% Increase
15	Large Commercial	16.76% Increase
16	Total	9.13% Increase

17

18 **Rate Design and Proposed Rates**

19 **Q. Please explain NorthWestern’s rate design goals in this docket.**

20 **A.** NorthWestern’s primary goal is that its prices for natural gas delivery service be  
21 cost-based and competitively priced to alternate fuel choices for customers. The  
22 revenues to be recovered by proposed rates are consistent with the class cost of  
23 service study results. The class cost of service study indicates that the small and  
24 large commercial classes have the lowest rates of return and should therefore

1 receive the greatest percentage increases. As a basic approach to apportioning  
2 the total requested increase of approximately \$6.0 million, the goal is to move  
3 every class to the system average return of 7.75%.

4  
5 **Q. Are you recommending a change to the current rate structure of**  
6 **NorthWestern's rate schedules?**

7 **A.** No, NorthWestern is not recommending any changes in rate structure. The only  
8 recommended changes are increases to the customer and non-gas cost delivery  
9 service charge component of rates.

10  
11 **Q. Are you recommending any changes to purchased natural gas cost**  
12 **recovery?**

13 **A.** Yes. NorthWestern recommends one change to the Released Capacity and  
14 Balancing Service Surcharge. This surcharge is part of tariff rates 84, 85 and 86.

15  
16 **Q. What is the change you are recommending?**

17 **A.** The change proposed is to increase the rate from \$0.017 to \$0.0327 per therm.  
18 Exhibit JJD-5 Confidential Surcharge Cost shows the calculation of this rate.  
19 Costs have increased since the last review in 2011 and this will update the rate  
20 to be current with the costs NorthWestern experiences from the upstream  
21 pipelines. Section 3, Sheets 3.2, 5.1 and 9b of the tariff show the revised rate.  
22 The rate of \$0.017 shown in tariff section 3, sheet 6.1. NorthWestern based that  
23 rate originally on the balancing service surcharge. However, an update to that  
24 rate is not appropriate as NorthWestern considered the charge to the customer

1 within the calculation of the rate for the Milbank pipeline recovery rate discussed  
2 within this testimony.

3  
4 **Q. Will this change result in additional revenue margin for NorthWestern?**

5 **A.** No. NorthWestern passes the revenue received from this surcharge back to  
6 customers through the purchased gas adjustment that is filed each month with  
7 the SDPUC.

8  
9 **Q. Please describe your proposed rate change for residential Rate 81.**

10 **A.** Overall, proposed revenue increases for residential customers are consistent  
11 with revenue levels required in the class cost of service study. NorthWestern is  
12 proposing to increase its monthly customer charge for residential customers by  
13 \$2.00 to \$10.00. The class cost of service study indicates that a fully loaded  
14 customer charge for this type of account should be approximately \$17 per month.  
15 NorthWestern included the remaining increase, not collected via the proposed  
16 customer charge increase, in the distribution delivery commodity charge. More  
17 of the increase was put into the first rate block to compensate for the entire  
18 customer-related costs not being collected in the monthly customer charge.

19  
20 **Q. Please describe your proposed rate change for the small commercial class  
21 (Rate No. 82 or General Gas Service).**

22 **A.** Overall, proposed revenue increases for small commercial customers are  
23 consistent with revenue levels required in the class cost of service study.  
24 NorthWestern is proposing to increase its monthly customer charge for small

1 commercial customers by \$2.00 to \$12.00. The class cost of service study  
2 indicates that a fully loaded customer charge for this type of account should be  
3 approximately \$19 per month. NorthWestern included the remaining increase,  
4 not collected via the proposed customer charge increase, in the distribution  
5 delivery commodity charge. The remaining increase was put into the first rate  
6 block to compensate for the entire customer-related costs not being collected in  
7 the monthly customer charge.

8  
9 **Q. Please describe your proposed rate change for the large commercial class**  
10 **(Rate Nos. 84 and 85 – Sales, Rate No. 86 Contract Sales, and Rate No. 87 -**  
11 **Transportation).**

12 **A.** Again, overall, proposed revenue increases for large commercial customers are  
13 consistent with revenue levels required in the class cost of service study.  
14 NorthWestern is proposing the customer charge for both the “A” and “B”  
15 customers increase \$20 per month. The “A” customer monthly charge is \$100  
16 per month compared to the cost of service recovery that shows the customer  
17 charge should be just over \$140. For the “B” customers, the current monthly  
18 customer charge is \$300 per month compared to the cost of service number of  
19 \$377. NorthWestern is proposing a \$20 increase to the current monthly \$100  
20 charge for Rates 84A and 85A. Rates 86A and 87A monthly charges will remain  
21 at \$150. For Rates 84B and 85B, NorthWestern proposes to increase the current  
22 monthly charge of \$300 to \$320, and for Rate 86B and 87B, NorthWestern  
23 proposes to increase the current monthly charge of \$350 to \$370. The remaining  
24 increase not collected through the fixed charge is included in the distribution

1 delivery rate.

2

3 **Q. Are you proposing to update demand charges in Rate 87 for the Milbank**  
4 **line?**

5 **A.** Yes. The rates for recovery of this line were originally established under  
6 Contract with Deviation in Docket No. NG11-001. In the rate review in Docket  
7 No. NG11-003, the rates were established in tariff rate 87. NorthWestern  
8 currently charges four large customers for this service. The current rate in the  
9 tariff is \$1.08. As shown on Exhibit JJD-4 Confidential, page 1, the proposed  
10 rate is \$1.20. The underlying calculations for this rate are shown on pages 1 and  
11 2 of this exhibit. The annual proposed increase to revenue is \$65,141. This is  
12 shown on row 39 of page 2.

13

14 **Q. On page 2, why is the Net Book Value higher than the original purchase**  
15 **cost?**

16 **A.** The South Dakota Department of Transportation performed work on Highway 15  
17 that required this pipeline to be moved. This occurred in 2022 and the project  
18 costs were charged to the Milbank Pipeline.

19

20 **Q. Are you proposing any new tariff rates in this filing?**

21 **A.** Yes we are proposing to add Rate 89, High Volume Transport Customers.

22

23 **Q. What customers will be subject to this rate?**

24 **A.** This tariff rate will apply to customers whose annual volumes exceed 10,000,000

1           therms, who have a direct connect to an upstream pipeline, and whose pipeline  
2           installation costs were recovered through a contract with deviation.

3  
4   **Q.    Why are you requesting a separate rate for this group of customers?**

5   **A.**   NorthWestern serves this group of customers under Contracts with Deviation.

6           This requires updated filings every five years for each customer.  Currently,  
7           NorthWestern calculates the customers' rates as a class that it updates annually.  
8           As a customer's five-year contract expires, the customer moves to the new rate,  
9           requiring a new contract with the customer and a SDPUC filing.  By serving this  
10          group of customers under a tariff rate, the time and work required by the current  
11          approval process will be eliminated.

12  
13   **Q.    Will there be a change to the current method of cost recovery calculation?**

14   **A.**   No.  NorthWestern will continue the same method of cost recovery, including the  
15          calculation of the management fee based on FERC methodology.  Docket No.  
16          NG23-021, Exhibit B, shows the most recently approved method of calculating  
17          the rate.

18  
19   **Q.    Are you proposing new tariff sheets for this rate?**

20   **A.**   Yes.  Section 3, Sheets 7 and 7.1 contain the proposed tariff.  The tariff includes  
21          the provisions of Section 5, general terms and conditions, and the conditions of  
22          Rate 87 that begins with section 3, sheet 6.1, with the exceptions noted for rate  
23          89 in section 3, sheets 7 and 7.1.  The tariff includes language to recover  
24          construction project costs through a surcharge for pipeline upgrades or pipeline

1 moves. NorthWestern included the security for construction costs and take or  
2 pay volumes to ensure the cost recovery and protection of customers.

3  
4 **Changes to the General Terms and Conditions**

5 **Q. Please explain the rate-related changes made to NorthWestern’s General**  
6 **Terms and Conditions as part of this filing.**

7 **A.** NorthWestern is proposing several updates to the general terms and conditions  
8 and two additional changes to tariff sheets as described below. The changes  
9 include an increase to the non-sufficient funds charge amount and updates to  
10 general terms tariff language, transportation tariff language, and updates to the  
11 community list and service map.

12  
13 **Q. Please describe the update to the non-sufficient funds charge.**

14 **A.** We are proposing to increase the non-sufficient funds charge from \$15.00 to  
15 \$30.00. This change will increase the charge to the current amount used in  
16 NorthWestern’s electric tariff approved by the SDPUC. Statement H-13 shows  
17 the proposed revenue impact of this adjustment and Section 5, Sheet 4 of the  
18 proposed natural gas tariff shows the revised language for this charge.

19  
20 **Q. Please describe the change to natural gas imbalance charges for Rate 87.**

21 **A.** In Section No. 3, Sheet No 6.4A of the tariff, NorthWestern is proposing to  
22 remove the language “Daily charges on imbalance will be waived if the  
23 customer’s daily imbalance is in the opposite direction of the Company’s daily net  
24 system pipeline imbalance, as determined by the Gas Control personnel.” This

1 change will align NorthWestern's tariff with upstream pipeline tariffs and make it  
2 more consistent for customers. Given the fact that our transporters are unaware  
3 of NorthWestern's overall position until the following month's bill, this should not  
4 change the way transport customers nominate or purchase gas, and will likely  
5 help transporters estimate their total costs more accurately since they will no  
6 longer be impacted by NorthWestern's overall position. NorthWestern believes  
7 the tariff's current 10% tolerance calculation is adequate and also aligns with the  
8 parameters that NorthWestern follows. Marketers will continue to have the option  
9 to buy daily imbalance services, as there is no proposed change to that tariff  
10 language. There are times when NorthWestern operationally makes a decision  
11 to go long or short on a pipeline, and in these instances, it would not be a benefit  
12 to NorthWestern or its retail customers for a marketer's imbalance to be in the  
13 opposite position. In order to strive to maintain excellent service with our  
14 customers and in keeping with our desire to be transparent, NorthWestern  
15 contacted the marketers that represent our transportation customers about the  
16 desired change. NorthWestern has had good discussion with three marketers  
17 regarding this change and has received no concerns from our transportation  
18 customers.

19  
20 **Q. What other changes to the tariff are you proposing?**

21 **A.** NorthWestern is updating Section 2, Sheets 1 and 2. NorthWestern has added  
22 the towns of Harrisburg, Sioux Falls, and Tea to the communities served listing  
23 and map as it has obtained franchises to serve natural gas in these communities.

24

1 **Q. Why is NorthWestern proposing to delete language in Section 3, Sheets**  
2 **3.3, 4.2 and 5.2 of the tariff?**

3 **A.** The Company no longer provides propane peaking gas. In addition, the  
4 availability of propane gas from an upstream service provider for an individual  
5 customer during a curtailment period is very unlikely. No customer has utilized  
6 this surcharge provision for at least the past 10 years and therefore, this change  
7 will not affect any customer.

8

9 **Q. Why are you updating Section 5, Sheet 1b?**

10 **A.** The intent of this change is to decrease the number of Contract with Deviation  
11 filings. The current tariff allows for security requirements for project costs and  
12 references projects that “term longer than one year”. The additional language  
13 will clarify that NorthWestern’s tariff allows take or pay volumes and construction  
14 surcharges for construction cost recovery.

15

16 **Q. Does this complete your pre-filed direct testimony?**

17 **A.** Yes, it does.
