6 transport where a direct interconnection is not present. The LNP petition filed on  
7 behalf of the Telephone Authority included an Exhibit detailing the estimated  
8 implementation costs for LNP. This Exhibit is attached as Exhibit (A). Each of  
9 the cost elements will be defined in the following paragraphs.

10 I. LNP Nonrecurring Costs

11 The nonrecurring costs of LNP include the costs identified below.

12 *Switch Upgrade Costs:*

13 The Telephone Authority utilizes a Nortel Networks (Nortel) DMS-10 as its wire-  
14 line switching platform. The Telephone Authority determined from discussions  
15 with Nortel personnel that the existing generic software will not support LNP.

16 Based on information provided to the Telephone Authority, the nonrecurring cost  
17 estimate for the LNP software feature was \$22,000.

18 *Internal business procedure changes*

19 The implementation of LNP will require the Telephone Authority to implement  
20 new administrative policies and procedures. The nonrecurring costs included  
21 training for six (6) customer service representatives and coordination of service  
22 order procedures with the central office technicians. It also includes the estimated  
23 cost of local routing number assignment training and the engineering services of

1 the Telephone Authority's engineers, Kadrmas, Lee & Jackson for general engi-  
2 neering services used in the LNP implementation planning process. The costs  
3 were estimated as follows:

4 The training of six (6) customer service representatives and the coordination of  
5 service order procedures with the central office technicians was estimated to re-  
6 quire 18 hours at an approximate loaded labor rate of \$20.00 per hour for a cost of  
7 \$367.

8 The cost of training company employees in connection with Local Routing Num-  
9 ber Assignment was estimated at \$1,000.

10 The estimated central office technician costs relating to administrative procedure  
11 changes was estimated at 27 hours at an approximate loaded labor rate of \$37.50  
12 per hour for a cost of \$1,000.

13 Estimated engineering costs from Kadrmas, Lee & Jackson in connection with  
14 LNP implementation are \$3,700.

15 *intercarrier Testing*

16 This cost estimate addresses the anticipated activities to program a ported  
17 number in the central office, set-up of appropriate switching functions and testing  
18 the functionality of the LNP software. This estimate included internal and exter-  
19 nal central office technician time of 160 hours at a labor rate of \$37.50 per hour  
20 including benefits which totaled approximately \$6,000.

21 *Other internal costs*

22 The implementation of the LNP DMS-10 software will require outside training at  
23 a Nortel training facility. The estimated costs include training costs, the time of

1 three (3) central office technicians at the training facility, travel, meals and lodg-  
2 ing. Total estimated cost, \$5,108.

3 *LNP Query set-up*

4 The estimated internal costs to establish and set-up a ported out number 15 was  
5 estimated by reviewing the NECA Tariff FCC No. 5 and includes the LNP order  
6 charge and estimated administrative office time and central office technician time.  
7 The LNP order charge was estimated at \$48. The office and central office techni-  
8 cian time to set-up accounts was estimated at \$320.

9 *Service Order Administration ("SOA")*

10 As part of the LNP implementation, the Telephone Authority must select a  
11 provider to administer updates to the Number Portability Administration Center  
12 (NPAC) LNP database. The SOA cost estimate was based on a survey of SOA  
13 providers and was estimated to be \$1,000.

14 *Customer Notification Costs*

15 The implementation of LNP likely will generate confusion among the Telephone  
16 Authority subscribers. The Telephone Authority plans to develop advertising and  
17 bill inserts to educate subscribers about LNP and what it means to the subscribers.  
18 The cost of developing advertising and bill inserts was determined by reviewing  
19 costs of prior notifications, local newspaper advertising and the estimated admin-  
20 istrative staff and legal review time to prepare a notification. This cost was esti-  
21 mated at \$995.

22

1 caused by future changes to LNP software. The estimated monthly cost of these  
 2 upgrades, including labor and benefit costs for Telephone Authority employees  
 3 involved with the upgrades, was estimated at \$185.

4 *Recurring transport costs*

5 Recurring transport costs represents the costs and revenues associated with lower  
 6 telecommunications network usage and the potential loss of operating revenues  
 7 associated with LNP. To quantify the potential costs and lost revenues, the Tele-  
 8 phone Authority's publicly available 2002 traffic study was reviewed. The esti-  
 9 mated total annual minutes-of-use lost due to an estimated 10 ported numbers was  
 10 calculated. The total lost minutes-of-use were increased by a factor of 2 to esti-  
 11 mate lost toll minutes-of-use and potential local and access rate increases. These  
 12 assumptions were applied only to those wireless carriers not directly connected to  
 13 the Telephone Authority. The total recurring transport costs were estimated as  
 14 follows:

15	Total annual minutes-of-use	66,156,563	
16	Divided by access lines	<u>3,499</u>	
17	Estimated lost access minutes-of-use	18,907	(minutes-of-use per year)
18	Estimated ported lines	x 10	
19	Weighting factor	<u>x 2</u>	
20	Minutes-of-use per year	378,140	
21	Intrastate terminating access rate	<u>.1168</u>	(composite)
22	Estimated lost annual access revenues	\$ 44,166	

1 Estimated additional central office technician labor including benefits to monitor,  
2 change or adjust switching registers for ported numbers:

3 Approximately 144 hours annually at \$37.50 per hour 5,400

4 Total estimated annual recurring transport cost \$ 49,566

5 Estimated monthly recurring transport cost \$ 4,126

6 **Q: How were the number of “ported out” numbers determined?**

7 A: For purposes of the estimates provided, a factor of .5% was applied to the Tele-  
8 phone Authority’s 2,365 access lines, which excludes lifeline customers, rounded  
9 to the nearest 10. This resulted in an estimate of 10 ports per year.

10 **Q: What additional costs could be incurred if the porting interval were short-**  
11 **ened?**

12 A: If the porting interval is shortened, the Telephone Authority would need to have  
13 internal and external technical expertise readily available to perform the required  
14 porting procedures. Additional costs that would be incurred are unknown at this  
15 time.

16 **Q: How would the cost estimates change if the Telephone Authority must**  
17 **implement only Intramodal (wireline to wireline) LNP?**

18 A: As I currently understand how the Telephone Authority’s network functions, I am  
19 unaware of any significant changes to the cost estimates provided to implement  
20 intramodal LNP versus intermodal LNP at this time.

21 **Q: Does this conclude your direct testimony?**

22 A: Yes.

## Exhibit (A)

Exhibit (A)

Cheyenne River Sioux Tribe Telephone Authority  
 Estimated Local Number Portability Costs

<u>LNP Nonrecurring Costs</u>	<u>Without Transport</u>	<u>With Transport</u>
Switch upgrade costs	\$ 22,000	\$ 22,000
Internal business procedure changes	6,067	6,067

IN THE MATTER OF THE PETITION  
OF CHEYENNE RIVER SIOUX TRIBE  
TELEPHONE AUTHORITY FOR SUS-  
PENSION OR MODIFICATION OF  
§ 251(b)(2) OF THE COMMUNICA-  
TIONS ACT OF 1934 AS AMENDED

Docket No. TC04-085  
REBUTTAL TESTIMONY OF  
DOUGLAS J. NEFF

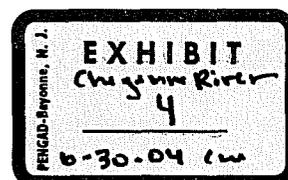

REBUTTAL TESTIMONY OF

DOUGLAS J. NEFF

ON BEHALF OF

CHEYENNE RIVER SIOUX TRIBE TELEPHONE AUTHORITY

June 14, 2004

1 Q: What is your name and address?

2 A: My name is Douglas J. Neff. My business address is 1501 Regents Blvd., Suite 100,  
3 Fircrest, WA 98466. My business phone number is (253) 566-7070.

4 Q: What is the purpose of your testimony?

5 A: I will provide rebuttal testimony on the Cheyenne River Sioux Tribe Telephone Au-  
6 thority ("CRSTTA") cost exhibit included in Mr. Ron Williams May 28, 2004 testi-  
7 mony on behalf of Western Wireless.

8 Q: Do you dispute any of the costs changed by Mr. Ron Williams in his May 28, 2004 cost  
9 exhibit for CRSTTA?

10 A: Yes. I dispute the highlighted cells noted on Mr. Ron Williams May 28, 2004 cost  
11 exhibit as follows:

12 *SOA Non-recurring set-up charge*

13 Mr. Ron Williams' cost exhibit shows no costs for SOA non-recurring set-up charge  
14 because, according to Mr. Williams, this charge is for an automated SOA interface  
15 which cannot be justified based on the estimated port volumes.

16 As noted in my earlier testimony, the CRSTTA cost estimate of \$1,000 for SOA non-  
17 recurring set-up charge was based on a survey of SOA providers obtained under a  
18 Non Disclosure Agreement. That survey of SOA providers did not differentiate the  
19 estimated \$1,000 non-recurring fee from a manual or automated SOA interface. In  
20 any event, it appears that Western Wireless does not challenge the dollar amount of  
21 \$1,000 estimated by CRSTTA. Rather, it challenges whether an automated SOA in-  
22 terface can be justified. (See, Western Wireless response to Interrogatory 10.b. at-  
23 tached to the Rebuttal Testimony of Steven E. Watkins).

24 *Non-recurring transport charges*

1 Mr. Ron Williams' cost exhibit shows a cost of \$400, whereas the CRSTTA cost ex-  
2 hibit shows a cost of \$2,306. Mr. Ron Williams provides the cost of \$400 with no  
3 explanation as to how he arrived at that cost. However, in its response to Interroga-  
4 tory 14.a., Western Wireless states that the \$400 is the estimated non-recurring  
5 charge for reconfiguration of the existing trunk group to the Qwest tandem. As in-  
6 dicated in my testimony, "in the case where a direct transport connection is unavail-  
7 able, the cost estimate of \$2,306 was determined by estimating internal and external  
8 central office technician labor costs with benefits to install, set-up and establish  
9 transport paths at \$37.50 per hour for approximately 60 hours." This cost was es-  
10 timated to not only reconfigure the existing trunk group to the tandem, but also es-  
11 timate configuring local trunk groups from local wireless facilities to the CRSTTA  
12 central office.

#### 13 *SOA Monthly Charge*

14 Mr. Ron Williams' cost exhibit shows an amount of \$13 per month. Mr. Ron Wil-  
15 liams indicates in his testimony that "Most of their other Petitioners have similarly  
16 forecasted low porting volumes that do not justify an automated SOA interface and  
17 a high minimum monthly recurring charges," with no support provided as to how  
18 the \$13 SOA monthly charge was determined. In answer to Interrogatory 13.a.,  
19 Western Wireless states that the estimated per port line charge for SOA services is  
20 \$15. The CRSTTA estimate was based upon a survey of SOA providers and in-  
21 cluded a monthly recurring fee and a yearly cost that totaled \$800 per month.

#### 22 *Switch Maintenance Costs*

23 Mr. Ron Williams argues that there should be no switch maintenance costs assigned  
24 to LNP. Each year, Nortel provides annual software upgrades to the CRSTTA  
25 DMS-10. These annual upgrades replace or enhance many of the calling features or

1 operational aspects of the software of the DMS-10. I assumed that approximately  
2 5% of an annual software upgrade would be attributed to future LNP enhance-  
3 ments, producing an estimated monthly cost associated with LNP to be approxi-  
4 mately \$185.

5 *Transport*

6 Mr. Ron Williams estimates transport costs of \$49. Again, Mr. Ron Williams pro-  
7 vides an estimate of \$49 for monthly recurring transport, but no calculations or  
8 facts to support the cost. In response to Interrogatory 14, however, Western Wire-  
9 less states that the monthly recurring cost was calculated using the following for-  
10 mula: (Annual Ports x 2.5 years) x (local calls per day x length of calls x days per  
11 month) x transit rate. The recurring monthly transport costs in my cost exhibit  
12 equated the potential loss of subscribers and resulting cost shifts to the remaining  
13 subscribers, interexchange access service providers and the impact on long distance  
14 network service revenues to the cost to CRSTTA in the form of a lost monthly re-  
15 curring revenue flow.

16 This lost recurring revenue was estimated by reviewing the 2002 publicly available  
17 traffic study and calculating estimated revenues lost for an estimated 10 ported  
18 numbers.

19 Q. Do you have any other comments about Mr. Williams testimony with respect to SOA  
20 costs and transport costs?

21 A. Yes. Mr. Williams' revised cost estimates are based on the Petitioner's projection  
22 that there will be a low volume of ports. Western Wireless, however, in response to  
23 Interrogatory 13.f., estimates that it will port 230 numbers from CRSTTA over a  
24 five (5) year period, which is 46 ports per year. If you assume that Verizon Wireless  
25 will have a similar number of ports, the total number of ports per year would be 92.

1 Pursuant to Western Wireless' SOA methodology, the SOA cost would be \$115 per  
2 month (as compared to \$13 per month in Mr. Williams' cost exhibit) and \$1380 per  
3 year. Similarly, under Western Wireless' formula, transport costs, based on 46  
4 ports, would be \$226.26 per month (as compared to \$49 per month in Mr. Williams'  
5 cost exhibit) and \$2715 per year. (I have calculated transport costs to Verizon  
6 Wireless only and not Western Wireless because Western Wireless has a direct con-  
7 nection to CRSTTA.) Thus, under Western Wireless' assumptions and formulas,  
8 the cost of LNP will be greater than that reflected in Mr. Williams' cost exhibit.

9 Q. Do you have any other comments?

10 A. Yes. If Western Wireless' estimate of the number of ports is correct, there will be  
11 far fewer CRSTTA subscribers and, therefore, the per subscriber cost of LNP will  
12 be much greater than the per subscriber cost projected by Western Wireless. For  
13 example, if CRSTTA loses 230 lines, the per line cost of LNP as calculated by West-  
14 ern Wireless would increase to \$0.9259 per line and if CRSTTA loses 230 lines to  
15 each wireless carrier, for a total of 460 lines, the per line cost of LNP as calculated  
16 by Western Wireless would increase to \$1.469 per line including transport.

17 Q. Is there a way to try to better estimate how many ports may occur and, therefore, more  
18 accurately determine the per subscriber cost of LNP?

19 A. Yes. A review of the actual number of wireline to wireless ports in other rural areas  
20 over some period of time may provide a better indication of how many CRSTTA  
21 customers may chose to port their number to a wireless carriers.

22 Q: Does this conclude your rebuttal testimony?

23 A: Yes.

CERTIFICATE OF SERVICE

The undersigned hereby certifies that she served a copy of the foregoing **REBUTTAL TESTIMONY** upon the persons herein next designated, on the date below shown, by depositing a copy thereof in the United States mail at Pierre, South Dakota, postage prepaid, in an envelope addressed to each said addressee, to-wit:

TIONS ACT OF 1934 AS AMENDED

Docket No. TC04-061

---

**DIRECT PRE-FILED TESTIMONY OF  
JERRY REISENAUER**

May 14, 2004

**DIRECT PRE-FILED TESTIMONY OF  
JERRY REISENAUER**

1  
2  
3  
4 **Q: What is your name and address?**

5 A: My name is Jerry Reisenauer. My business address is 801 Coleman Avenue, P.O.  
6 Box 39, Bison, SD, 57620-0039. My business telephone number is (605) 244-5216.

7 **Q: By whom are you employed and in what capacity?**

8 A: I am the General Manager of West River Cooperative Telephone Company  
9 (WRCTC). WRCTC is a rural independent local exchange carrier that provides lo-  
10 cal exchange, exchange access and other telecommunications services to 3,763 ac-  
11 cess lines within its South Dakota service area, which includes the exchanges of Bi-  
12 son, Buffalo, Camp Crook, Lemmon, Meadow, Newell, Nisland, and Sorum.

13 **Q: Does your company have any direct points of interconnection with any wireless  
14 carrier and/or does your company provide any blocks of numbers for your  
15 company's rate centers to any wireless carrier?**

16 A: No.

17 **Q: How do the local calling areas of your exchanges compare with those of the  
18 wireless carriers operating in your area?**

19 A: We are a small company with only eight exchanges. Our service areas are defined  
20 by where we have physical cable plant. However, the wireless carriers serve by the  
21 reach of a radio frequency from a tower site. The wireless MTAs and BTAs are  
22 much larger than our exchange boundaries; however, the areas in which subscribers  
23 can receive wireless coverage are actually smaller. The boundaries of our wire/rate  
24 centers and the local calling areas of wireless carriers serving in our area vary  
25 greatly.

1 **Q: Does your company provide any Extended Area Service (EAS) plans to its sub-**  
2 **scribers or to a connecting carrier's subscribers?**

3 A: Bison subscribers (605-244) have EAS to Meadow, Sorum, and Lemmon (605-788,  
4 605-866, 605-374 and 701-376).

5 Buffalo subscribers (605-375) have EAS to Camp Crook (605-797 and 406-972).

6 Camp Crook subscribers (605-797 and 406-972) have EAS to Buffalo (605-375).

7 Lemmon subscribers (605-374 and 701-376) have EAS to Bison, Meadow, Sorum,  
8 McIntosh, and Morrystown (605-244, 605-788, 605-866, 605-273 and 701-276,  
9 605-524 and 701-522).

10 **Q: What is the current method of routing calls from your subscriber's landline**  
11 **phones to wireless phone numbers?**

12 A: As an example, when a subscriber located in Bison uses his/her landline phone to  
13 call a wireless phone number, the call is routed from the subscriber's landline phone  
14 to the Bison central office switch, where it is determined to be a non-local call and  
15 is therefore switched to a toll trunk group. The toll trunk carries the call to SDN  
16 Communication's (SDN) Centralized Equal Access (CEA) tandem, which is located  
17 in Sioux Falls, to be routed to the appropriate Point of Interconnection (POI) of the  
18 wireless carrier.

19 **Q: What is the number of wireless carriers authorized to serve in your company's**  
20 **service area?**

21 A: To my knowledge, four (4) wireless carriers are authorized to serve in WRCTC's  
22 service area (Verizon Wireless, Western Wireless, Sprint PCS, and Nextel).

1 **Q: Have any subscribers requested local number portability (LNP) from your**  
2 **company?**

3 A: To my knowledge, not a single WRCTC subscriber has requested local number  
4 portability from WRCTC. Further, there was considerable press and TV coverage  
5 in our service area about this issue when the FCC first issued its November 10 Or-  
6 der.

7 **Q: Since the passage of the 1996 Telecom Act have any wireline carriers ever re-**  
8 **quested LNP from your company?**

9 A: No.

10 **Q: Have any wireless carriers submitted bona fide requests for LNP and if so**  
11 **when?**

12 A: Yes. Western Wireless (November 18, 2003) and Verizon (October 23, 2003)

13 **Q: Are there any existing capital investments for broadband that will be diverted**  
14 **if your company must deploy LNP?**

15 A: Yes. DSL and broadband services are of utmost importance to our customers. Of  
16 all our new services, our customers are most interested in broadband. We are up-  
17 grading existing plant at an accelerated pace. This new plant will provide our  
18 members dependable service for many years. The most cost effective, long-term  
19 solution for replacement of plant that has outlived its useful life is fiber technology.  
20 This technology will also provide broadband services to our members. Any amount  
21 of capital investment that is diverted to the implementation of LNP will reduce  
22 needed capital from investments in new infrastructure and broadband capabilities.  
23 WRCTC is a small company and has limited resources to fund network invest-

1           ments. We would prefer to serve the real demands of our customers rather than  
2           provide a service that has been mandated by the FCC that our customers are not re-  
3           questing.

4   **Q: What will the impact be on WRCTC and its customers if it is required to pro-**  
5   **vide intermodal LNP?**

6   A: WRCTC is a small rural company with a small customer base. Therefore, if LNP is  
7   required, the cost of implementing intermodal LNP will hit WRCTC and its cus-  
8   tomers very hard. We have few economies of scale in implementing intermodal  
9   LNP. Exhibit 1 to our Petition shows a \$9 impact per access line. This is for a ser-  
10   vice that not a single customer has requested to date. There is little, if any, demand  
11   for intermodal LNP in our service area. With little or no demand, there would be a  
12   substantial burden to pay for the service. Further, the vast majority of our custom-  
13   ers will have to pay for those few, if any, who may decide to port their numbers.  
14   It's a very poor bargain for the majority of our customers.

15 **Q: In your experience as the general manager of WRCTC have you seen increases**  
16 **or additions to the itemized fees on your customer's telephone bills?**

17 A: Yes. Most of our members have told me there have been too many new fees or fee  
18   increases on their bills in recent years. We received a number of complaints from  
19   members when the subscriber line charge (SLC) went from \$3.50 to \$6.50 after the  
20   MAG Plan was approved by the FCC. Many elderly members tell me of their con-  
21   cerns of having to discontinue their service because of increased costs.

22 **Q: What do you expect your customer's reaction to be to any new LNP fees on**  
23 **their bills?**

1 A. If it is anything close to \$9 per month, the reaction will be very hostile. The vast  
2 majority of our customers gain no benefit from this service, and I expect strong pro-  
3 tests. The protests will be far worse than those to the SLC increase. Many of our  
4 customers are elderly and will be especially hard hit, and some will simply discon-  
5 tinue service, which concerns me greatly when you review the geographic area we  
6 serve, with the nearest hospital 45 to 100 miles away and the nearest neighbor  
7 sometimes several miles away. There could be times when lack of local service  
8 could be a serious and possibly even a life or death issue. I feel strongly that it is  
9 not in the West River members' best interests when the large majority of our mem-  
10 bers will be required to pay for a mandated service that will benefit few if any of  
11 our members.

12 **Q: Do you expect that the costs of implementing Intermodal LNP could create the**  
13 **necessity of a rate increase for WRCTC?**

14 A. Depending on what costs are recoverable in any LNP end user fees, if the remainder  
15 is significant, WRCTC will not be able to absorb them and may have to implement  
16 a dial tone rate increase to recover any deployment costs.

17 **Q: Do you have any concluding comments?**

18 A. There are so many unknowns regarding intermodal LNP implementation in rural  
19 exchanges. It makes much more sense to wait for the FCC or the Courts to clarify  
20 key issues, such as: 1) How are rural ILECS to interconnect with distant wireless  
21 POI? 2) What would the porting interval be? and 3) If a number is ported, how  
22 would ILECs maintain the original wireline rate center when the service areas of  
23 wireline and wireless companies vary so greatly? There are so many unanswered

1 questions it clearly makes sense to save our resources until these questions are an-  
2 swered. Doing so will save our customers significant dollars and help us provide  
3 services they actually want, such as broadband.

4 **Q: Does this conclude your direct testimony?**

5 A: Yes. I also reserve the opportunity to revise or modify this pre-filed direct testi-  
6 mony at or before the hearing if I receive additional information pertaining to the  
7 issues I presented herein.

BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA

IN THE MATTER OF THE PETITION  
OF WEST RIVER COOPERATIVE  
TELEPHONE COMPANY FOR SUS-  
PENSION OR MODIFICATION OF  
§ 251(b)(2) OF THE COMMUNICA-  
TIONS ACT OF 1934 AS AMENDED

Docket No. TC04-061  
REBUTTAL TESTIMONY OF  
JERRY REISENAUER

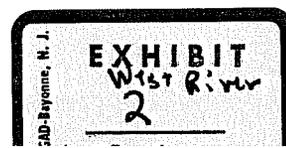

REBUTTAL TESTIMONY OF

JERRY REISENAUER

ON BEHALF OF

WEST RIVER COOPERATIVE TELEPHONE COMPANY

June 14, 2004

1 Q. Please state your name, business name and address.

2 A. **My name is Jerry Reisenauer. I am the General Manager of West River Coopera-**  
3 **tive Telephone Company (“West River”), whose address is 801 Coleman Avenue,**  
4 **Bison, South Dakota 57620.**

5 Q. What is the purpose of your testimony?

6 A. **I will provide rebuttal testimony to various statements made by Ron Williams in his**  
7 **testimony filed on May 28, 2004 on behalf of WWC License L.L.C. (Western Wire-**  
8 **less).**

9 Q. At page 6, lines 8-10, Mr. Williams alleges that the Petitioners “waited 4 months to seek  
10 a suspension of their LNP obligations, hopeful that this tactic would result in delay of  
11 their legal obligations.” How do you respond?

12 A. **I dispute Mr. Williams’ characterization of events as baseless and inflammatory.**  
13 **Once the FCC made it clear that wireline carriers would be required to port num-**  
14 **bers to wireless carriers in areas outside the top 100 MSAs by May 24, 2004, West**  
15 **River took immediate steps to investigate the cost and the processes involved with**  
16 **LNP and to explore its legal options. Because West River had no experience with**  
17 **LNP, it took time to gather the pertinent information and to make the decision to**  
18 **seek a suspension of the requirement from the Commission. Further, the suspension**  
19 **petition itself took time and effort to prepare because West River wanted to present**  
20 **as complete a petition as possible, accompanied by cost information as complete as**  
21 **possible.**

22 Q. Do you agree with Mr. Williams’ statement at page 14, lines 19-22, in which he states  
23 that “LECs will need to route a call to a ported number to the serving tandem” and to Mr.  
24 Williams’ statement at page 15, lines 1-4 when he discusses the routing of allegedly “lo-  
25 cal calls?”

1 A. In its answer to Interrogatory 4., Western Wireless identifies the “serving tandem”  
2 as the Qwest LATA or local tandem, which is outside of West River’s service terri-  
3 tory. (See Western Wireless Response to Interrogatory 4., attached to the Rebuttal  
4 Testimony of Steven E. Watkins). Mr. Williams’ statement is not consistent with the  
5 interconnection agreement signed by West River and Western Wireless. Pursuant  
6 to that agreement, West River did not agree to route traffic destined for Western  
7 Wireless to the serving tandem. Rather, traffic terminating to Western Wireless is  
8 routed to an interexchange carrier. Therefore, it appears that Western Wireless’  
9 argument really is a bad faith attempt to change the agreement between the parties.

10 Q. At page 19, lines 8-10, Mr. Williams states that it is his belief that “the FCC views that it  
11 is the originating carrier’s responsibility to deliver local traffic for termination and that  
12 the costs associated with fulfilling that responsibility are not a number portability cost.”  
13 What is your response to this statement?

14 A. Mr. Williams’ statements are inconsistent and should be rejected. First he argues  
15 that West River should be required to install new facilities to deliver ported calls to  
16 Western Wireless and then he argues that the cost of those facilities are not number  
17 portability costs. Further, as discussed at lines 1-9 above, Mr. Williams’ suggestion  
18 that it is West River’s responsibility to deliver traffic destined to Western Wireless  
19 through a serving tandem is not consistent with the interconnection agreement be-  
20 tween West River and Western Wireless.

21 Q. At page 20, lines 13-16, Mr. Williams states that “[t]he routing methods proposed by the  
22 Petitioners are inefficient in that they make little or no utilization of existing equipment  
23 and shared facilities currently used to exchange calls with other carriers.” How do you  
24 respond?

1 A. The routing methods reflected in the cost exhibit attached to West River's Petition  
2 are based on the current routing arrangements that West River has in place with  
3 other carriers, namely, calls that are dialed on a local 7-digit basis are routed via di-  
4 rect connections. Therefore, if calls to numbers ported to a carrier are to be dialed  
5 on a local 7-digit basis, a direct connection needs to be established between the car-  
6 riers.

7 Q. Would Western Wireless' routing proposal have impacts to West River beyond LNP?

8 A. Yes. It is my understanding that Western Wireless' proposal would increase West  
9 River's costs. First, Western Wireless' proposal would require West River to pay  
10 for new facilities to the tandem provider that it does not need for any purpose other  
11 than to route calls to ported numbers to wireless carriers. Second, West River  
12 would most likely have to pay transit traffic charges to the tandem provider for  
13 transporting the traffic to the wireless carriers. Third, in response to Interrogatory  
14 16.b., Western Wireless indicates that West River would be required to pay recip-  
15 rocal compensation on calls to ported numbers, even if West River does not pay com-  
16 pensation on such calls today. (See Western Wireless Response to Interrogatory  
17 16.b. attached to the Rebuttal Testimony of Steven E. Watkins.)

18 Q. Is there any other impact?

19 A. Yes. It appears that Western Wireless' proposal would create a regulatory arbi-  
20 trage scenario that could lead to the loss of access revenues. Today, certain calls to  
21 wireless carriers are routed to interexchange carriers. For example, if West River  
22 Customer A calls Western Wireless Customer B, West River Customer A incurs a  
23 toll charge. However, under Western Wireless' proposal, it is my understanding  
24 that if West River Customer A calls Western Wireless Customer B, who now has a  
25 number ported from West River, West River Customer A would be charged for a

1           **local call. Customers may be encouraged to “give up” their existing wireless num-**  
2           **bers and obtain wireline numbers for the sole purpose of porting that number to**  
3           **avoid toll charges. This is not only a bad public policy result, but also simply a bad**  
4           **faith attempt to avoid an important contract provision upon which Western Wire-**  
5           **less has already agreed with our company.**

6    Q.    Does this conclude your rebuttal testimony?

7    A.    Yes.

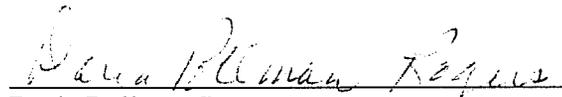

**CERTIFICATE OF SERVICE**

The undersigned hereby certifies that she served a copy of the foregoing **REBUTTAL TESTIMONY** upon the persons herein next designated, on the date below shown, by depositing a copy thereof in the United States mail at Pierre, South Dakota, postage prepaid, in an envelope addressed to each said addressee, to-wit:

BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA

---

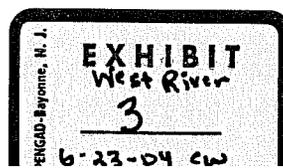

IN THE MATTER OF THE PETITION  
OF WEST RIVER COOPERATIVE  
TELEPHONE COMPANY FOR SUS-  
PENSION OR MODIFICATION OF  
§ 251(b)(2) OF THE COMMUNICA-  
TIONS ACT OF 1934 AS AMENDED

Docket No. TC04-061

---

**DIRECT PRE-FILED TESTIMONY OF  
JOHN DE WITTE**

**May 14, 2004**

1 Inc., a telecommunications equipment manufacturer in Raleigh, NC and Atlanta,  
2 GA. I am a regular speaker at many state, regional, and national telephone com-  
3 pany organization events, including the National Telephone Cooperative Associa-  
4 tion (NTCA) and the Organization for the Promotion and Advancement of Small  
5 Telecommunications Companies (OPASTCO). In this capacity, I often advise tele-  
6 phone company managers and board members regarding a variety of technical and  
7 financial issues.

8 **Q: On whose behalf are you testifying in this proceeding?**

9 A: My direct pre-filed testimony is submitted on behalf of West River Cooperative  
10 Telephone Company (WRCTC).

11 **Q: What is the purpose of your testimony?**

12 A: I will provide testimony on technical and cost issues of implementing intermodal  
13 LNP that is pertinent to this hearing.

14 **Q: Are you familiar with current telephone network technologies, including**  
15 **switching equipment, transmission equipment, and outside plant architec-**  
16 **tures?**

17 A: I have provided engineering and consulting services to more than 100 rural LECs  
18 across the United States. I am familiar with nearly all of the technologies and archi-  
19 tectures of a rural LEC network, including transport equipment, switching equip-  
20 ment, digital loop carrier equipment, broadband networks, along with copper and  
21 fiber outside plant cable. I have engineered both landline networks and wireless  
22 networks for my clients.

1 **Q: Do you understand the various methods and requirements that are required to**  
2 **support Intramodal (wireline to wireline or wireless to wireless) and Inter-**  
3 **modal (wireline to wireless) Local Number Portability?**

4 A: Yes I do.

5 **Q: With the number of variants for LNP, which implementation of LNP is the fo-**  
6 **cus of your testimony?**

7 A: In general, the methodologies, rules, and implementation processes for wireline In-  
8 tramodal LNP are clearly defined, have been in place for several years, and are  
9 widely deployed. The methodologies, rules, and implementation processes for In-  
10 termodal (wireline to wireless) LNP and wireless Intramodal LNP have only been  
11 in place since November 2003. Intermodal LNP relating to wireline to wireless  
12 ports will be the focus of my direct testimony.

13 **Q: What unique challenges are presented to a rural Independent Local Exchange**  
14 **Carrier (ILEC) with the implementation requirements of Intermodal LNP?**

15 A: There are several technical and economic issues facing rural ILECs as they evaluate  
16 the implementation of Intermodal LNP. These challenges for small rural LECs  
17 concern the interconnection of wireless and wireline networks for the purposes of  
18 implementing Intermodal LNP. The Petitioner does not have existing direct points  
19 of connection to wireless carriers' networks in any of the rate centers it serves.  
20 Where there are no direct points of connection with the wireless carriers, only con-  
21 ventional, switched toll routes remain; but no translating, routing, rating or cost re-  
22 covery rules are in place. Some of the questions that need to be addressed include:  
23 (1) where and how should the Petitioner interconnect with the wireless carriers, (2)

1 is the point of interconnection within the LATA, and (3) how will the Petitioner be  
2 able to maintain the original rate center designation and rating when the number is  
3 ported to a point of interconnection that is located outside the original rate center,  
4 when the wireless service area and the Petitioner's service area vary greatly. These  
5 issues are unique in rural areas, such as the Petitioner's service area, where few, if  
6 any interconnection arrangements exist and there are fewer subscribers in compari-  
7 son to metropolitan areas over which to spread the costs of Intermodal LNP. The  
8 uncertainty surrounding these and other questions are likely to cause significant  
9 customer confusion, complaints to the Petitioner and the SDPUC, and the resulting  
10 perception of degraded customer service on the part of the Petitioner's members.  
11 WRCTC has not received a LNP request from a wireline competitive local ex-  
12 change carrier (CLEC); therefore WRCTC has not previously implemented LNP.  
13 As a result, numerous upgrades in software and operational procedures will be re-  
14 quired in order to meet the Intermodal LNP requirements, which will benefit only  
15 those few subscribers that choose to leave WRCTC, while encumbering the entire  
16 remaining subscribers with the burden of funding the porting benefit. In addition,  
17 current implementation rules do not provide the necessary competitive playing field  
18 to allow wireless subscribers to port to WRCTC's wireline services.

19 **Q: What are the anticipated costs of implementing Intermodal LNP?**

20 A: The anticipated costs of implementing Intermodal LNP can be categorized into four  
21 (4) basic areas: 1) Switching related costs, 2) Number Portability Administration  
22 Center (NPAC) related costs, 3) Administrative/Technical costs and 4) Transport  
23 Costs. The LNP Petition filed on behalf of WRCTC included an Exhibit detailing

1 the estimated implementation costs for intermodal LNP. This Exhibit is attached as  
2 Exhibit [1]. Each of the cost elements in these categories will be identified in the  
3 following paragraphs.

#### 4 Switching Related Costs

5 The cost elements in this category include switching generic software upgrades,  
6 LNP software features, prerequisite software features to support the LNP features,  
7 any requisite switch hardware to support the operation of the LNP software, switch  
8 vendor installation costs, vendor software activation fees, and maintenance ex-  
9 penses attributable to LNP. As part of the cost estimates provided with the  
10 WRCTC Waiver Petition, the cost estimates for this category are detailed as fol-  
11 lows:

#### 12 LNP Hardware Requirements

13 WRCTC utilizes a Nortel Networks (Nortel) DMS-10 as its wireline switching plat-  
14 form. WRCTC has verified with Nortel that the existing DMS-10 configuration  
15 does not require any hardware additions to support the activation of LNP software.  
16 Therefore, WRCTC did not claim any non-recurring or recurring cost estimates for  
17 LNP hardware as part of its estimated costs.

#### 18 LNP Software Features

19 According to oral conversations with Nortel, the WRCTC DMS-10 network cur-  
20 rently has the generic software load that will support LNP. The LNP software fea-  
21 tures have not been activated in WRCTC's DMS-10s. Based on LNP program pric-  
22 ing estimates from Nortel Networks, the non-recurring cost estimate for the LNP  
23 Basic software feature for DMS-10 switches is \$4 per equipped line, which amounts

1 to \$18,800 for WRCTC. Nortel does not charge a recurring Right-To-Use (RTU)  
2 fee for these features. Based on the program pricing information provided by  
3 Nortel, WRCTC claimed \$18,800 for LNP software features and did not claim any  
4 recurring cost estimates for LNP software as part of its estimated costs.

5 Additional Software Features

6 WRCTC has verified with Nortel that the existing DMS-10 configuration does not  
7 require any pre-requisite software additions to support the activation of LNP soft-  
8 ware. Therefore, WRCTC did not claim any non-recurring or recurring cost esti-  
9 mates for additional LNP software as part of its estimated costs.

10 Additional Vendor Fees

11 WRCTC has not participated in Nortel's annual software upgrade program  
12 (Nortel's SR-10 program). As a result, Nortel will likely assess a fee for the activa-  
13 tion of LNP features if they are ultimately required as a result of this hearing.  
14 Based on oral LNP pricing estimates from Nortel Networks, WRCTC claimed  
15 \$5,000 as a non-recurring cost estimate required for feature activation.

16 Initial LNP Translations

17 There are several activities that are required to initially set up and test the basic  
18 translations for LNP. The non-recurring initial translations cost estimates were  
19 based on the anticipated fees to data-fill and test basic LNP functionality in the Peti-  
20 tioner's switching system. This testing includes coordination of testing with the  
21 SOA provider, coordination of testing with any transiting carriers, verification of  
22 proper LNP dip activities, verification of billing system interaction, and other trans-  
23 lations activities. This cost estimate is approximately \$10,000. In order to allow

1 time for coordination of testing with other entities, it is assumed that the initial  
2 translations testing will require approximately two (2) man-weeks of translations  
3 activities by a 3<sup>rd</sup> party technical consultant for its host switch, at a loaded hourly  
4 rate of \$100 per hour. The remaining portion of this cost estimate includes travel,  
5 living and other miscellaneous expenses.

#### 6 Technical Implementation and Testing

7 There are several activities that are required to initially set up and test the basic  
8 translations for each CMRS carrier requesting Intermodal LNP. The non-recurring  
9 technical implementation and testing cost estimates were based on the anticipated  
10 fees to data-fill and test specific Intermodal LNP functionality in the Petitioner's  
11 switching system. The non-recurring technical implementation and testing cost es-  
12 timates were based on performing number porting tests individually associated with  
13 each CMRS to ensure that the ported number route correctly flows through the Peti-  
14 tioner's network. As the FCC has not required a formal Interconnection Agree-  
15 ment, it is assumed that the Petitioner will be responsible for performing these tests  
16 in order to ensure proper call routing. The cost estimate is based on 24 hours of  
17 testing at \$100 per hour for each appropriate exchange by a 3<sup>rd</sup> party resource and  
18 includes travel and living expenses.

#### 19 NPAC Related Costs

20 The cost elements in this category include Service Order Administration (SOA)  
21 costs, LNP Query costs, and connection costs with the LNP database. As part of  
22 the cost estimates provided with the WRCTC Waiver Petition, the cost estimates for  
23 this category are detailed as follows:

1        Service Order Administration

2        As part of the LNP implementation process, the Petitioner must select a provider to  
3        administer updates to the Number Portability Administration Center (NPAC) LNP  
4        database. In anticipation of reduced porting intervals in the future, the Petitioner  
5        has elected to include the costs for an automated SOA system. The SOA cost esti-  
6        mates were based a compilation of SOA services price lists from several firms pro-  
7        viding automated SOA services. These cost estimates represent the anticipated  
8        start-up costs and recurring costs levied by the SOA provider to utilize its auto-  
9        mated services to update the LNP databases. The sample pricing scenarios were  
10       obtained under Non Disclosure Agreement (NDA) from several SOA services pro-  
11       viders. As the Petitioner has not entered into any contracts with these or any SOA  
12       entities, firm pricing cannot be provided. As an estimate, the non-recurring SOA  
13       costs were assumed to be \$2,000 with the recurring SOA costs assumed to be \$500.  
14       Should the Petitioner enter into a contract with an automated SOA provider, these  
15       cost estimates can be revised.

16       LNP Query Charges

17       With the implementation of LNP, the Petitioner will incur charges for each LNP  
18       query launched for its subscribers. The LNP query cost estimates were based on a  
19       compilation of SOA services price lists from several firms providing automated  
20       SOA services. The sample pricing scenarios were obtained under NDA from sev-  
21       eral SOA Services providers. As the Petitioner has not entered into any contracts  
22       with these or any SOA entities, firm pricing cannot be provided. The non-recurring  
23       LNP Query cost estimate represents the anticipated start-up costs levied by the SOA

1 provider to utilize its services to dip its database. This initial set-up charge is as-  
2 sumed to be \$500. The recurring LNP Query cost estimates were based on the as-  
3 sumption that each of the Petitioner's access lines would generate five (5) to six (6)  
4 call attempts per day; each of the call attempts would generate an LNP query. The  
5 query charge is assumed to range between \$0.001 and \$0.0005 per query. Based on  
6 these assumptions, the recurring LNP Query charge was assumed to be \$500.  
7 Should the Petitioner enter into a contract with an automated SOA provider, these  
8 cost estimates can be revised.

#### 9 Connection Costs w/LNP Database

10 With the implementation of LNP, the Petitioner will incur set-up charges levied by  
11 the SOA provider to enter its NECA Operating Company Number (OCN) and Point  
12 codes for each switch launching LNP queries to the SOA's LNP database. The  
13 non-recurring connection costs with LNP database estimate was based on a compi-  
14 lation of SOA services price lists from several firms providing automated SOA ser-  
15 vices. The sample pricing scenarios were obtained under NDA from several SOA  
16 Services providers. As the Petitioner has not entered into any contracts with these  
17 or any SOA entities, firm pricing cannot be provided. The cost estimate for this  
18 element was estimated at \$150, assuming \$150 per point code. Should the Peti-  
19 tioner enter into a contract with an automated SOA provider, this cost estimate can  
20 be revised.

#### 21 Technical and Administrative Costs

22 The cost elements in this category include testing and verification of each ported  
23 DN, translations for each ported DN, administrative cost estimates, regulatory cost

1 estimates, customer care cost estimates, and marketing cost estimates. As part of  
2 the cost estimates provided with the WRCTC Waiver Petition, the cost estimates for  
3 this category are detailed as follows:

4 Testing and Verification of Each Ported Dial Number

5 This cost estimate addresses the anticipated activities to test each “ported out” di-  
6 rectory number (DN) to verify the proper routing of the DN. The recurring Test-  
7 ing/Verification cost estimates were based on \$35 per port at the Petitioner’s loaded  
8 technical labor costs of \$50 per hour.

9 Per Port Translations

10 This cost estimate addresses the anticipated translations activities to “port out” each  
11 DN. The recurring translations cost estimate was based on one (1) hour per port at  
12 the Petitioner’s loaded technical labor costs of \$50 per hour.

13 Administrative Costs

14 The implementation of LNP will require WRCTC to implement new administrative  
15 policies and procedures. The non-recurring administrative cost estimates were  
16 based on providing LNP process training for the Petitioner’s administrative person-  
17 nel. The training is assumed to be provided by the entity providing automated SOA  
18 services. The Petitioner has not selected a SOA provider at this time. The non-  
19 recurring costs estimates are based on a one-week onsite customer service represen-  
20 tative training class, including the instructor’s travel and living expenses. This cost  
21 is assumed to be \$10,000. The recurring administrative cost estimate addresses the  
22 anticipated administrative activities required with entry of the ported number into  
23 the SOA system. The recurring administrative cost estimates were based on one

1 half (1/2) hour per port at the Petitioner's loaded administrative labor costs of \$46  
2 per hour.

3 Regulatory Costs

4 This cost element is associated with the Petitioner's Legal Fees and Regulatory  
5 Consulting fees. The legal fees are associated with the Petitioner's attorneys. The  
6 anticipated fees are associated with reviewing the legal aspects of LNP filings and  
7 LNP implementation. The regulatory consulting fees are typically associated with  
8 the updates required to various National databases (NECA Tariff 4, Telcordia  
9 LERG, etc.) and the possible assistance with the completion of the NECA End User  
10 Charge worksheets. This cost is estimated at 100 hours at an average rate of \$150  
11 per hour and includes travel, living, and miscellaneous expenses. Based on the le-  
12 gal activities required to implement LNP, the Petitioner may revise this figure at a  
13 later date.

14 Customer Care Costs

15 The implementation of LNP will require WRCTC to implement new customer care  
16 policies and procedures. The non-recurring customer care cost estimates were  
17 based on providing LNP customer care training for the Petitioner's administrative  
18 personnel. The training is assumed to be provided by the entity providing the Peti-  
19 tioner's billing platform services. The Petitioner has not developed the Customer  
20 Care and Billing processes for LNP at this time. The costs estimates are based on a  
21 one-week onsite Operational Support Services (OSS) training class. The recurring  
22 customer care cost estimates were based on one-half (1/2) hour per port at the Peti-  
23 tioner's loaded customer care labor costs of \$46 per hour. This cost estimate ad-

1 dresses the anticipated administrative activities required with updating the Petitioner's customer care and billing system and to track the "ported out" DNs.

3 Marketing and Informational Flyer Cost Estimates

4 The implementation of LNP will likely generate subscriber confusion from the addition of an End User Charge for the implementation of LNP. The Petitioner plans to develop an informational flyer to help educate the subscriber base by explaining LNP and the reasons for the proposed LNP End User Charge appearing on the subscribers' monthly local service bill. The non-recurring marketing and informational flyer cost estimates were based on the costs required to develop an informational flyer and billing insert explaining LNP and any end-user fees that may apply. The total non-recurring estimated costs in this category were expressed as a "per access line" cost and were estimated at approximately \$4.00 per subscriber. This cost estimate includes the development of the explanatory LNP text, the graphic design artwork, and first run printing costs. The recurring marketing and informational flyer cost estimates were based on \$3.75 per subscriber per year for volume print costs, handling, and mailing the periodic flyer/bill insert. This recurring marketing/informational flyer cost estimate was amortized over 12 months to arrive at an estimated monthly fee for the Cost Exhibit.

19 Billing/Customer Care Software Updates

20 The Petitioner's billing and customer care system will require software upgrades to support LNP. The non-recurring billing and customer care software upgrade cost estimates represents the anticipated costs to upgrade the Petitioner's billing system

1 to accommodate LNP functionality. This upgrade was estimated as an allocated  
2 cost of the Petitioner's annual billing system upgrade.

3 Transport-Related Cost Estimates

4 The cost elements in this category include the estimated costs of transport to con-  
5 nect the Petitioner's exchange with the CMRS carriers, anticipated cost estimates  
6 for transiting CMRS connections, and anticipated cost estimates for pass-through  
7 N-1 Tandem LNP queries. As part of the cost estimates provided with the WRCTC  
8 Waiver Petition, the cost estimates for this category are detailed as follows:

9 Transport Cost Estimates

10 The Petitioner will require direct Type 2B DS1 transport facilities from the Peti-  
11 tioner's exchange to each CMRS provider's Point of Interconnection (POI) for  
12 those CMRS carriers requesting intermodal LNP. The Petitioner does not possess  
13 POI information for each CMRS carrier. The non-recurring wireless carriers POI  
14 cost estimates represent the costs associated with providing a Type 2B DS1 span to  
15 each CMRS provider. As stated in the Petition, the Petitioner assumes interconnec-  
16 tion will be required with four (4) CMRS carriers. The Petitioner estimates that the  
17 non-recurring transport costs for each CMRS will be approximately \$5,000 per ex-  
18 change. This cost estimate includes the switch DS1 interface hardware and support-  
19 ing equipment required to place a Type 2B DS1 span into service. The recurring  
20 wireless carriers POI cost estimates were based on monthly transport lease cost es-  
21 timates. As stated in the Petition, the Petitioner assumes interconnection will be re-  
22 quired with four (4) CMRS carriers. The estimates for the recurring transport costs  
23 for each Type 2B DS1 were estimated be \$800 per month (to a POI in Rapid City,

1 SD). WRCTC plans to revise this recurring transport cost estimate once POI in-  
2 formation is provided by the CMRS carriers and firm pricing can be provided by a  
3 transport provider (such as SDN Communications or Qwest).

#### 4 Mobile Telephone Switching Office (MTSO) POI Connection Cost Estimates

5 The Petitioner does not possess POI information for the CMRS carriers that have or  
6 will likely to provide a Bona Fide Request (BFR) to the Petitioner for intermodal  
7 LNP. The possibility exists that a transiting carrier (such as Qwest or SDN Com-  
8 munications) may establish Type 2B DS1 connections with one or more of the  
9 CMRS carriers. The MTSO POI connection cost estimates represent the anticipated  
10 costs for the Petitioner's share of this connection, if required. The non-recurring  
11 MTSO POI connection cost estimates were based on an estimate of the start-up  
12 costs to utilize a transiting carrier for CMRS MTSO connections, if required. The  
13 recurring MTSO POI connection cost estimates were based on the Petitioner's an-  
14 ticipated share of monthly lease for the transiting carrier MTSO POI connection  
15 cost estimates, if required. If the CMRS carriers elect to directly connect with the  
16 Petitioner (without a transiting carrier) on a direct Type 2B DS1 connection to the  
17 CMRS' Mobile Telephone Switching Office (MTSO), these cost estimates will  
18 likely be not applicable.

#### 19 Transiting Dip (Minimum) Cost Estimates

20 This cost estimate was based on the assumption that the transiting carrier may need  
21 to perform some LNP queries when the Petitioner's N-1 carrier fails to do so. The  
22 transiting non-recurring dip cost estimate describes the anticipated costs of the non-  
23 recurring set-up charges to enable the Petitioner to receive dip charges from a tran-

1 siting carrier, such as SDN Communications. The initial setup charges are likely to  
2 be passed on to Petitioner. WRCTC has estimated this cost to be \$500. The transit-  
3 ing carrier recurring dip cost estimates describe the anticipated costs of the mini-  
4 mum dip charges from a transiting carrier. These charges are likely to be passed on  
5 to Petitioner. WRCTC has estimated this cost estimate to be \$100 per month. If the  
6 CMRS carriers elect to directly connect with the Petitioner (without a transiting car-  
7 rier) on a direct Type 2B connection to the CMRS' Mobile Telephone Switching  
8 Office (MTSO), these cost estimates will likely be not applicable.

9 **Q: It appears that one of the larger estimated costs projected for the implementa-**  
10 **tion of Intermodal LNP relates to transport costs. What considerations con-**  
11 **cerning compensation for transport costs are applicable to the implementation**  
12 **of Intermodal LNP?**

13 A: With regard to the direct Type 2B connections to the wireless carriers described in  
14 the preceding cost estimates, these cost estimates are identified as required connec-  
15 tions to allow Intermodal LNP to function correctly within the Petitioner's existing  
16 billing and customer care systems.

17 **Q: If no direct Type 2B DS1 facilities are available for interconnection with the**  
18 **CMRS carriers, what happens for WRCTC?**

19 A: Without direct Type 2B facilities, the ported calls will be routed based on the Local  
20 Routing Number (LRN) delivered with the LNP query. The LRN will contain the  
21 NPA-NXX of the wireless carrier. Based on this NPA-NXX, these calls will be  
22 routed as toll calls over WRCTC's existing toll routes to WRCTC's Access Tandem  
23 (SDN Communications).

1 **Q: In your opinion, are the proposed Type 2B DS1 facilities to each CMRS carrier**  
2 **cost justified?**

3 A: Without actual traffic data, it is impossible to determine the feasibility of a particu-  
4 lar facility. However, based on the anticipated traffic levels generated by the pro-  
5 jected intermodal LNP ports, it appears that the construction of these facilities is not  
6 cost-justified. If the facilities were feasible, it is likely that the wireless carriers  
7 would have implemented them already as they have in other areas. Based on the  
8 projected traffic levels, it appears that the direct facilities between Petitioner and the  
9 wireless carriers required for LNP would be highly under-utilized and very ineffi-  
10 cient.

11 **Q: It appears that some of the anticipated cost estimates are based on the quantity**  
12 **of anticipated numbers that would be ported to a CMRS carrier. How was the**  
13 **number of ports determined?**

14 A: The quantity of projected ports is a function of the competitive environment in the  
15 proposed service area, the number of CMRS carriers, and other statistical data. The  
16 data that is currently available concerning porting activity for CMRS carriers on a  
17 wide-scale basis is limited. It is my understanding that no Petitioner customer has  
18 ever made an inquiry to Petitioner regarding LNP or a request for LNP. With re-  
19 spect to wireless LNP nationwide, to date, the demand for wireless porting has been  
20 far less than expected and most ports have been from one wireless carrier to an-  
21 other. Wireline to wireless porting appears to be a small fraction of wireless porting

1 in general.<sup>1</sup> According to NeuStar, 95% of wireless ports have been from one wire-  
2 less carrier to another and only 5% of wireless ports were between wireline and  
3 wireless carriers.<sup>2</sup> With lack of ubiquitous quality and incomplete coverage of the  
4 Petitioner's existing service area by the existing wireless carriers, I believe that the  
5 percentage would be even smaller than in other more urban parts of the nation. For  
6 purposes of the cost exhibit, approximately one (1) intermodal ports per year were  
7 estimated,<sup>3</sup> which is well under the five (5) percent of the Petitioner's access lines.  
8 Accordingly, there appears to be little, if any, demand for LNP and, absent such  
9 demand, no public benefit will be derived from LNP. Even if some level of LNP  
10 demand develops in the future, the total implementation costs that would be in-  
11 curred by Petitioner to implement and maintain LNP would require re-evaluation  
12 based on the customer demand, quantity of ports, and the revised estimated costs for  
13 the required LNP infrastructure elements.

14 **Q: Will any of the Petitioner's estimated costs change if the number of estimated**  
15 **ports is changed?**

16 A: Yes. There are several of the estimated recurring costs that are driven by the num-  
17 ber of ports. These cost elements include the recurring translations costs, the recur-  
18 ring testing and verification of each ported number, the recurring administrative  
19 cost estimates, and the recurring customer care costs. If the projected number of

---

<sup>1</sup> See "Survey Finds Little Impact From LNP", *RCR Wireless News*, February 9, 2004 ed., reporting that according to a consumer survey report from CFM Direct, very few telecommunications customers have switched their wireline phone numbers to wireless.

<sup>2</sup> See NARUC Notebook, *Communications Daily*, Vol. 24, No. 46, p. 4 (March 9, 2004)

<sup>3</sup> While actual industry figures are not available, most wireless carriers are currently experiencing a porting rate of between three percent (3%) and six percent (6%). Of these ports, it is estimated that between one percent (1%) and three percent (3%) are intermodal.

1 ports increases, these costs will increase. If the number of projected ports de-  
2 creases, these costs will decrease.

3 **Q: The current porting interval is currently four (4) days. If the porting interval**  
4 **were shortened to two (2) days or less, what effect, if any, would this shortened**  
5 **interval have on the estimated costs?**

6 A: The current industry experience with Intermodal porting is has not been without  
7 implementation issues. Significant problems meeting the current four (4) day port-  
8 ing interval have been reported. Assuming that the implementation issues are re-  
9 fined to the point where a shorter porting interval can be supported, the Petitioner  
10 has included the known cost elements to support a shorter porting interval. The Pe-  
11 titioner has assumed the use of an automated SOA system as part of their antici-  
12 pated LNP implementation costs. An automated SOA system will allow the Peti-  
13 tioner to accommodate an electronic request and acknowledgement for the ported  
14 numbers. Therefore, the Petitioner does not anticipate any increases in its SOA re-  
15 lated non-recurring or recurring cost estimates. It is possible that additional recur-  
16 ring costs in the areas of translations, technical implementation, testing, verifica-  
17 tion, customer care, and administrative would occur if the porting interval were to  
18 be reduced to require that porting activities occur outside of the standard business  
19 day (expedited requests, nights, weekends, and holidays). If porting is required dur-  
20 ing these times, additional loaded labor rates will be incurred. If the porting re-  
21 quirements are confined to the standard business day, the Petitioner does not antici-  
22 pate any additional recurring LNP costs. However, it is possible that unforeseen re-  
23 quirements could require additional charges.

1 **Q: Are there any other potential costs that could impact WRCTC with the im-**  
2 **plementation of Intermodal LNP?**

3 A: If WRCTC must implement intermodal LNP, all carriers with EAS arrangements  
4 with WRCTC and their customers will be impacted because the other carrier will  
5 have to LNP dip all EAS calls. This would increase the cost of EAS between  
6 WRCTC and the other carrier and could result in a loss of EAS options to the cus-  
7 tomer or an increase in the cost of optional EAS service.

8 **Q: Some telecommunications industry analysts have suggested that Foreign Ex-**  
9 **change Service (FX) could be used to provide connections to accommodate in-**  
10 **termodal LNP. Is this a reasonable alternative?**

11 A: There have been industry discussions of using an FX service for Intermodal LNP  
12 interconnection. An FX service is a line appearance that is extended from the  
13 “home” exchange to a “foreign” exchange using dedicated point-to-point facilities.  
14 The FX service is engineered on a per line basis. It is not a common trunk that can  
15 be used by a carrier for routing purposes. With an FX service, the LEC has cus-  
16 tomers and facilities in one rate center and provides service to customers in another  
17 rate center using the same “home” number block. To do this, facilities are extended  
18 from the LEC rate center to the foreign rate center where the customer resides. It is  
19 important to note that the customer pays for the use of these facilities. The LEC is  
20 compensated for their facilities and lost toll revenue through these customer  
21 charges. It is unknown exactly how an ILEC would implement an FX service to  
22 accommodate Intermodal LNP. The exact connectivity, rate elements, and network  
23 configuration for the proposed Intermodal LNP FX service appear to be undefined.

1 As such, any discussion of using FX as a viable transport alternative for Intermodal  
2 LNP transport is purely speculation.

3 **Q: You have addressed several estimated costs for Intermodal LNP. How would**  
4 **these cost estimates change if the Petitioner must implement only Intramodal**  
5 **(wireline to wireline) LNP?**

6 A: All cost elements would stay the same, but the amount of the cost estimates could  
7 change. It is my understanding that both wireline providers would be in the same  
8 rate center. Accordingly, the primary change in the estimated costs would be in the  
9 area of transport costs. The petitioner estimates that these costs would likely be  
10 significantly reduced. Intramodal LNP has clearly defined processes for the ex-  
11 change of traffic between the respective wireline carriers competing in a clearly de-  
12 fined rate center. In the intramodal LNP cases with which I am familiar, the carri-  
13 ers have entered into an Interconnection Agreement. The Intramodal Interconnec-  
14 tion Agreement addresses the methods and compensation that will be used to estab-  
15 lish interconnection and exchange traffic between the wireline carriers. The com-  
16 pensation for the traffic volumes is typically in the form of reciprocal compensa-  
17 tion. In addition, the recurring costs for testing of each ported number would likely  
18 be reduced since the dialing plans and routing between the carriers will likely not  
19 change on a regular basis. The reduction of these costs is dependent upon the vol-  
20 ume of ports. The remaining costs will likely be unchanged.

21 **Q: What would be the timeframe required for the Petitioner to fully implement,**  
22 **test and place Intermodal LNP into commercial service, if required to do so?**

1 A: Please refer to the LNP Implementation Timeline, attached hereto as Exhibit [2].  
2 The Timeline details the individual, inter-dependent tasks necessary to fully imple-  
3 ment Intermodal LNP. They are arrayed in a self-explanatory fashion, showing the  
4 anticipated duration of each task and its relationship to other tasks. The overall du-  
5 ration that results for the Timeline supports that approximately six (6) months  
6 would be required to fully prepare for, implement, test and place Intermodal LNP  
7 into commercial service, as stated in the WRCTC Waiver Petition. As with any  
8 planning horizon, this timeline does not take into account holidays or other unfore-  
9 seen delays due to Force Majure.

10 **Q: Does this conclude your direct testimony?**

11 A: Yes. I also reserve the opportunity to revise or modify this pre-filed direct testi-  
12 mony at or before the hearing if I receive additional information pertaining to the  
13 issues I presented herein.

Revised May 13, 2004

**BEFORE THE PUBLIC UTILITIES COMMISSION OF THE  
STATE OF SOUTH DAKOTA**

IN THE MATTER OF THE PETITION FOR LOCAL NUMBER)  
PORTABILITY SUSPENSION OR MODIFICATION )  
ON BEHALF OF SANTEL COMMUNICATIONS COOPERATIVE, )  
INC. ) Docket No. TC04-038  
)

**DIRECT PRE-FILED TESTIMONY OF  
GENE KROELL**

**Q: What is your name and address?**

A: My name is Gene Kroell. My business address is 308 South Dumont Avenue, PO Box 67, Woonsocket, SD, 57385-0067. My business telephone number is (605) 796-4411.

**Q: By whom are you employed and in what capacity?**

A: I am the General Manager of Santel Communications Cooperative, Inc. (Santel). Santel is a rural independent local exchange carrier that provides local exchange, exchange access and other telecommunications services to 4,827 access lines within its South Dakota service area, which includes the exchanges of Woonsocket, Alpena, Artesian, Ethan, Forestburg, Letcher, Mount Vernon, Parkston, Tripp, and Wolsey.

**Q: Does your company have any direct points of interconnection with any wireless carrier and/or does your company provide any blocks of numbers for your company's rate centers to any wireless carrier?**

A: No.

**Q: How do the local calling areas of your exchanges compare with those of the wireless carriers operating in your area?**

A: We are a small company with only ten exchanges. Our service areas are defined by where we have physical cable plant. However, the wireless carriers serve by the reach of a radio frequency from a tower site. Their wireless local calling area is often much larger than our exchange boundaries. The boundaries of our wire/rate centers and the local calling areas of wireless carriers serving in our area vary greatly.

**Q: Does your company provide any Extended Area Service (EAS) plans to its subscribers or to a connecting carrier's subscribers?**

A: Santel provides the following EAS:

Artesian subscribers (605-527) have EAS to Howard (605-772).

Wolsey subscribers (605-883) have EAS to Huron (605-352, 605-353, 605-350 & 605-354).

**Q: What is the current method of routing calls from your subscriber's landline phones to wireless phone numbers?**

A: As an example, when a subscriber located in Woonsocket uses his/her landline phone to call a wireless phone number, the call is routed from the subscriber's landline phone to the Woonsocket central office switch, where it is determined to be a non-local call and is therefore switched to a toll trunk group. The toll trunk carries the call to SDN Communication's (SDN) Centralized Equal Access (CEA) tandem, which is located in Sioux Falls, to be routed to the appropriate Point of Interconnection (POI) of the wireless carrier.

**Q: What is the number of wireless carriers authorized to serve in your company's service area?**

A: To my knowledge, four (4) wireless carriers are authorized to serve in Santel's service area (Verizon Wireless, Western Wireless, Sprint PCS, and Nextel).

**Q: Have any subscribers requested local number portability (LNP) from your company?**

A: To my knowledge, not a single Santel subscriber has requested local number portability from Santel. Further, there was considerable press and TV coverage in our service area about this issue when the FCC first issued its November 10, 2003 Order.

**Q: Since the passage of the 1996 Telecom Act have any wireline carriers ever requested LNP from your company?**

A: No.

**Q: Have any wireless carriers submitted bona fide requests for LNP and if so when?**

A: Yes. Western Wireless, November 2003

**Q: Are there any existing capital investments for broadband that will be diverted if your company must deploy LNP?**

A: Yes. DSL and broadband services are of utmost importance to our customers. Of all our new services, our customers are most interested in broadband. We are upgrading our networks to provide broadband services. Any amount of capital investment that is diverted to the implementation of LNP will reduce needed capital from broadband investments. Santel is a small company and has limited resources to fund network investments. We would like to serve the real demands of our customers rather than provide a service that has been mandated by the FCC that our customers are not requesting.

**Q: What will the impact be on SANTEL and its customers if it is required to provide intermodal LNP?**

A: Santel is a small rural company with a small customer base. Therefore, if required the cost of implementing intermodal LNP will hit Santel and its customers very hard. We have few economies of scale in implementing intermodal LNP. Exhibit 1 to our Petition shows a \$9 impact per access line. This is for a service that not a single customer has requested to date.

There is little, if any, demand for intermodal LNP in our service area. With little demand there is a substantial burden to pay for the service. Further, the vast majority of our customers will have to pay for those few, if any, that may decide to port their numbers. It's a very poor bargain for the majority of our customers.

**Q: In your experience as the general manager of Santel have you seen increases or additions to the itemized fees on your customer's telephone bills?**

A. Yes. Most customers tell me there have been too many new fees or fee increases on their bills in recent years. We received considerable protests from customers when the subscriber line charge (SLC) went from \$3.50 to \$6.50 after the MAG Plan was approved by the FCC.

**Q: What do you expect your customer's reaction to be to any new LNP fees on their bills?**

A. If it is anything close to \$9 per month the reaction will be very hostile. The vast majority of our customers gain no benefit from this service and I expect strong protests. The protests will be far worse than those to the SLC increase. Many of our customers are elderly. They will be especially hard hit.

**Q: Do you expect that the costs of implementing Intermodal LNP could create the necessity of a rate increase for Santel?**

A. Depending on what costs are recoverable in any LNP end user fees, if the remainder is significant, Santel will not be able to absorb them and may have to implement a dial tone rate increase to recover any deployment costs.

**Q: Do you have any concluding comments?**

A. There are so many unknowns yet regarding intermodal LNP implementation in rural exchanges. It makes so much sense to wait for the FCC or Courts to clarify key issues, such as: 1) How are rural ILECS to interconnect with distant wireless POI? 2) What will the

porting interval be? and 3) If a number is ported how do ILECs maintain the original wireline rate center when the service areas of wireline and wireless companies vary so greatly? There are so many unanswered questions it only makes sense to save our resources until these questions are answered. Doing so will save our customers significant dollars and help us provide services they actually want such as broadband.

**Q: Does this conclude your direct testimony?**

A: Yes. I also reserve the opportunity to revise or modify this pre-filed direct testimony at or before the hearing if I receive additional information pertaining to the issues I presented herein.

**CERTIFICATE OF SERVICE**

The undersigned hereby certifies that he served a an original a ten (10) copies of the foregoing **Direct Pre-filed Testimony of Gene Kroell** upon the person herein next designated, on the date below shown, by depositing a copy thereof in the United States mail at Woonsocket, South Dakota, postage prepaid, in an envelope addressed to said addressee, to wit:

9  
10  
11                                   **DIRECT PRE-FILED TESTIMONY OF**  
12                                   **JOHN DE WITTE**

13  
14   **Q:   What is your name and address?**

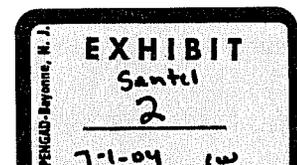

15   A:   My name is John M. De Witte. My business address is 1801 N. Main Street,  
16       Mitchell, South Dakota 57301.

17   **Q:   By whom are you employed and in what capacity?**

18   A:   I am the Vice President of Engineering of Vantage Point Solutions, Inc. (VPS).  
19       VPS is a telecommunications engineering and consulting firm in Mitchell, South  
20       Dakota with a full-time staff of 52 employees. Our client base of VPS is made up  
21       of rural independent Local Exchange Carriers (LECs). I focus on assisting the  
22       small LECs with nearly all technical and financial aspects of their operations. My  
23       direct staff of 13 and I have provided engineering, financial, and regulatory services  
24       to many of the South Dakota LECs, as well as LECs in several other states.

25   **Q:   What is your educational and business background?**

26   A:   I received a Bachelors of Science in Computer Engineering (1982) from Iowa State  
27       University (Ames, IA) and a Masters of Business Administration (1992) from  
28       Kennesaw Sate College (Kennesaw, GA). I am a Registered Professional Engineer  
29       in South Dakota and 10 other states.

1 I have been active in the telecommunications industry since 1983. Previous to VPS,  
2 I worked for Martin Group, Inc., based in Mitchell, South Dakota. At Martin  
3 Group, I was Assistant Director of Engineering of the Telecom Consulting and  
4 Engineering Business Unit, providing engineering and consulting services to rural  
5 telecommunications providers throughout the nation. Prior to this, I worked in a  
6 variety of engineering, marketing, and management positions at Nortel Networks,  
7 Inc., a telecommunications equipment manufacturer in Raleigh, NC, and Atlanta,  
8 GA. I am a regular speaker at many state, regional, and national telephone  
9 company organization events, including the National Telephone Cooperative  
10 Association (NTCA) and the Organization for the Promotion and Advancement of  
11 Small Telecommunications Companies (OPASTCO). In this capacity, I often  
12 advise telephone company managers and board members regarding a variety of  
13 technical and financial issues.

14 **Q: On whose behalf are you testifying in this proceeding?**

15 A: My direct pre-filed testimony is submitted on behalf of Santel Communications  
16 Cooperative, Inc. (Santel).

17 **Q: What is the purpose of your testimony?**

18 A: I will provide testimony on technical and cost issues of implementing intermodal  
19 LNP that is pertinent to this hearing.

20 **Q: Are you familiar with current telephone network technologies, including**  
21 **switching equipment, transmission equipment, and outside plant**  
22 **architectures?**

1 A: I have provided engineering and consulting services to more than 100 rural LECs  
2 across the United States. I am familiar with nearly all of the technologies and  
3 architectures of a rural LEC network, including transport equipment, switching  
4 equipment, digital loop carrier equipment, broadband networks, along with copper  
5 and fiber outside plant cable. I have engineered both landline networks and  
6 wireless networks for my clients.

7 **Q: Do you understand the various methods and requirements that are required to**  
8 **support Intramodal (wireline to wireline or wireless to wireless) and**  
9 **Intermodal (wireline to wireless) Local Number Portability?**

10 A: Yes I do.

11 **Q: With the number of variants for LNP, which implementation of LNP is the**  
12 **focus of your testimony?**

13 A: In general, the methodologies, rules, and implementation processes for wireline  
14 Intramodal LNP are clearly defined, have been in place for several years, and are  
15 widely deployed. The methodologies, rules, and implementation processes for  
16 Intermodal (wireline to wireline) LNP and wireless Intramodal LNP have only been  
17 in place since November 2003. Intermodal LNP, relating to wireline to wireless  
18 ports, will be the focus of my direct testimony.

19 **Q: What unique challenges are presented to a rural Independent Local Exchange**  
20 **Carrier (ILEC) with the implementation requirements of Intermodal LNP?**

1 A: There are several technical and economic issues facing rural ILECs as they evaluate  
2 the implementation of Intermodal LNP. These challenges for small rural LECs  
3 concern the interconnection of wireless and wireline networks for the purposes of  
4 implementing Intermodal LNP such as transport, porting interval, and  
5 interconnection. These issues will be discussed in further detail later in my  
6 testimony. The Petitioner does not have existing direct points of connection to  
7 wireless carriers' networks in any of the rate centers it serves. Where there are no  
8 direct points of connection with the wireless carriers, only conventional, switched  
9 toll routes remain; but no translating, routing, rating or cost recovery rules have are  
10 in place. Some of the questions that need to be addressed include: (1) where and  
11 how should the Petitioner interconnect with the wireless carriers, (2) is the point of  
12 interconnection within the LATA, and (3) how will the Petitioner be able to  
13 maintain the original rate center designation and rating when the number is ported  
14 to a point of interconnection that is located outside the original rate center, when the  
15 wireless service area and the Petitioner's service area vary greatly. These issues are  
16 unique in rural areas, such as the Petitioner's service area, where few, if any  
17 interconnection arrangements exist and there are fewer subscribers in comparison to  
18 metropolitan areas over which to spread the costs of Intermodal LNP. The  
19 uncertainty surrounding these and other questions are likely to cause significant  
20 customer confusion, complaints to the Petitioner and the SDPUC, and the resulting  
21 perception of degraded customer service on the part of the Petitioner's members.  
22 Santel has not received a LNP request from a wireline competitive local exchange

1 carrier (CLEC); therefore Santel has not previously implemented LNP. As a result,  
2 numerous upgrades in software and operational procedures will be required in order  
3 to meet the Intermodal LNP requirements, which will benefit only those few  
4 subscribers that choose to leave Santel, while encumbering the entire remaining  
5 subscribers with the burden of funding the porting benefit. In addition, current  
6 implementation rules do not provide the necessary level competitive playing field to  
7 allow wireless subscribers to port to Santel's wireline services.

8 **Q: What are the anticipated costs of implementing Intermodal LNP?**

9 A: The anticipated costs of implementing Intermodal LNP can be categorized into four  
10 (4) basic areas: 1) Switching related costs, 2) Number Portability Administration  
11 Center (NPAC) related costs, 3) Administrative/Technical costs and 4) Transport  
12 Costs. The LNP Petition filed on behalf of Santel included an Exhibit detailing the  
13 estimated implementation costs for intermodal LNP. This Exhibit is attached as  
14 Exhibit [1]. Each of the cost elements in these categories will be identified in the  
15 following paragraphs.

16 **Switching Related Costs**

17 The cost elements in this category include switching generic software upgrades,  
18 LNP software features, prerequisite software features to support the LNP features,  
19 any requisite switch hardware to support the operation of the LNP software, switch  
20 vendor installation costs, vendor software activation fees, and maintenance  
21 expenses attributable to LNP. As part of the cost estimates provided with the Santel  
22 Waiver Petition, the cost estimates for this category are detailed as follows:

1           LNP Hardware Requirements

2           Santel utilizes a Nortel Networks (Nortel) DMS-10 as its wireline switching  
3           platform. Santel has verified with Nortel that the existing DMS-10 configuration  
4           does not require any hardware additions to support the activation of LNP software.  
5           Therefore, Santel did not claim any non-recurring or recurring cost estimates for  
6           LNP hardware as part of its estimated costs.

7           LNP Software Features

8           According to oral conversations with Nortel, the Santel DMS-10 currently has the  
9           generic software load that will support LNP. The LNP software features have not  
10          been activated in Santel's DMS-10. Based on LNP program pricing estimates from  
11          Nortel Networks, the non-recurring cost estimate for the LNP Basic software  
12          feature for DMS-10 switches is \$4 per equipped line, which amounts to \$20,560 for  
13          Santel. Nortel does not charge a recurring Right-To-Use (RTU) fee for these  
14          features. Based on the program pricing information provided by Nortel, Santel  
15          claimed \$20,560 for LNP software features and did not claim any recurring cost  
16          estimates for LNP software as part of its estimated costs.

17          Additional Vendor Fees

18          Santel does not participate in Nortel's annual software upgrade program (Nortel's  
19          SR-10 program). As a result, Nortel will assess a fee for the activation of LNP  
20          features if they are ultimately required as a result of this hearing. Based on oral  
21          LNP pricing estimates from Nortel Networks, Santel also claimed as a Non-

1 Recurring Additional Software Fee an estimated \$5,000 charge required for feature  
2 activation.

3 Initial LNP Translations

4 There are several activities that are required to initially set up and test the basic  
5 translations for LNP. The non-recurring initial translations cost estimates were  
6 based on the anticipated fees to data-fill and test basic LNP functionality in the  
7 Petitioner's switching system. This testing includes coordination of testing with the  
8 SOA provider, coordination of testing with any transiting carriers, verification of  
9 proper LNP dip activities, verification of billing system interaction, and other  
10 translations activities. This cost estimate is approximately \$10,000. In order to  
11 allow time for coordination of testing with other entities, it is assumed that the  
12 initial translations testing will require approximately two (2) man-weeks of  
13 translation activities by a 3<sup>rd</sup> party technical consultant for its host switch, at a  
14 loaded hourly rate of \$100. The remaining portion of this cost estimate includes  
15 travel, living and other miscellaneous expenses.

16 Technical Implementation and Testing

17 There are several activities that are required to initially set up and test the basic  
18 translations for each CMRS carrier requesting Intermodal LNP. The non-recurring  
19 technical implementation and testing cost estimates were based on the anticipated  
20 fees to data-fill and test specific Intermodal LNP functionality in the Petitioner's  
21 switching system. The non-recurring technical implementation and testing cost  
22 estimates were based on performing number porting tests individually associated

1 with each CMRS to ensure that the ported number route correctly flows through the  
2 Petitioner's network. As the FCC has not required a formal Interconnection  
3 Agreement, it is assumed that the Petitioner will be responsible for performing these  
4 tests in order to ensure proper call routing. This cost estimate was based on \$5,000  
5 per CMRS Carrier. The cost estimate is based on 40 hours of testing at \$100 per  
6 hour for each appropriate wireless carrier by a 3rd party resource and includes  
7 travel and living expenses. Santel included estimates for two (2) CMRS carriers  
8 (assuming Western Wireless and Verizon). If additional CMRS carriers begin to  
9 offer services in Santel's exchange areas, Santel expects this estimate to increase by  
10 \$5,000 per CMRS carrier.

11 **NPAC Related Costs**

12 The cost elements in this category include Service Order Administration (SOA)  
13 costs, LNP Query costs, and connection costs with the LNP database. As part of  
14 the cost estimates provided with the Santel Waiver Petition, the cost estimates for  
15 this category are detailed as follows:

16 Service Order Administration

17 As part of the LNP implementation process, the Petitioner must select a provider to  
18 administer updates to the Number Portability Administration Center (NPAC) LNP  
19 database. In anticipation of reduced porting intervals in the future, the Petitioner  
20 has elected to include the costs for an automated SOA system. The SOA cost  
21 estimates were based a compilation of SOA services price lists from several firms  
22 providing automated SOA services. These cost estimates represent the anticipated

1 start-up costs and recurring costs levied by the SOA provider to utilize its  
2 automated services to update the LNP databases. The sample pricing scenarios  
3 were obtained under Non Disclosure Agreement (NDA) from several SOA services  
4 providers. As the Petitioner has not entered into any contracts with these or any  
5 SOA entities, firm pricing cannot be provided. As an estimate, the non-recurring  
6 SOA costs were assumed to be \$2,000 with the recurring SOA costs assumed to be  
7 \$500. Should the Petitioner enter into a contract with an automated SOA provider,  
8 these cost estimates can be revised.

9 LNP Query Charges

10 With the implementation of LNP, the Petitioner will incur charges for each LNP  
11 query launched for its subscribers. The LNP query cost estimates were based on a  
12 compilation of SOA services price lists from several firms providing automated  
13 SOA services. The sample pricing scenarios were obtained under NDA from  
14 several SOA Services providers. As the Petitioner has not entered into any  
15 contracts with these or any SOA entities, firm pricing cannot be provided. The non-  
16 recurring LNP Query cost estimate represents the anticipated start-up costs levied  
17 by the SOA provider to utilize its services to dip its database. This initial set-up  
18 charge is assumed to be \$500. The recurring LNP Query cost estimates were based  
19 on the assumption that each of the Petitioner's access lines would generate five (5)  
20 to six (6) call attempts per day, each of the call attempts would generate an LNP  
21 query. The query charge is assumed to range between \$0.001 and \$0.0005 per  
22 query. Based on these assumptions, the recurring LNP Query charge was assumed

1 to be \$600. Should the Petitioner enter into a contract with an automated SOA  
2 provider, these cost estimates can be revised.

3 Connection Costs w/LNP Database

4 With the implementation of LNP, the Petitioner will incur set-up charges levied by  
5 the SOA provider to enter its NECA Operating Company Number (OCN) and Point  
6 codes for each switch launching LNP queries to the SOA's LNP database. The  
7 non-recurring connection costs with LNP database estimate was based on a  
8 compilation of SOA services price lists from several firms providing automated  
9 SOA services. The sample pricing scenarios were obtained under NDA from  
10 several SOA Services providers. As the Petitioner has not entered into any  
11 contracts with these or any SOA entities, firm pricing cannot be provided. The cost  
12 estimate for this element was estimated at \$150 assuming a maximum of one (1)  
13 point code at \$150 per point code. Should the Petitioner enter into a contract with  
14 an automated SOA provider, this cost estimate can be revised.

15 **Technical and Administrative Costs**

16 The cost elements in this category include testing and verification of each ported  
17 DN, translations for each ported DN, administrative cost estimates, regulatory cost  
18 estimates, customer care cost estimates, and marketing cost estimates. As part of  
19 the cost estimates provided with the Santel Waiver Petition, the cost estimates for  
20 this category are detailed as follows:

21 Testing and Verification of Each Ported Dial Number

1 This cost estimate addresses the anticipated activities to test each “ported out”  
2 directory number (DN) to verify the proper routing of the DN. The recurring  
3 Testing/Verification cost estimates were based on one (1) hour per port at the  
4 Petitioner’s loaded technical labor costs of \$35 per hour.

5 Per Port Translations

6 This cost estimate addresses the anticipated translations activities to “port out” each  
7 DN. The recurring translations cost estimate was based on one (1) hour per port at  
8 the Petitioner’s loaded technical labor costs of \$50 per hour.

9 Administrative Costs

10 The implementation of LNP will require Santel to implement new administrative  
11 policies and procedures. The non-recurring administrative cost estimates were  
12 based on providing LNP process training for the Petitioner’s administrative  
13 personnel. The training is assumed to be provided by the entity providing  
14 automated SOA services. The Petitioner has not selected a SOA provider at this  
15 time. The non-recurring costs estimates are based on a one-week onsite customer  
16 service representative training class, including the instructor’s travel and living  
17 expenses. This cost is assumed to be \$10,000. The recurring administrative cost  
18 estimate addresses the anticipated administrative activities required with entry of  
19 the ported number into the SOA system. The recurring administrative cost  
20 estimates were based on one (1) hour per port at the Petitioner’s loaded  
21 administrative labor costs of \$46 per hour.

22 Regulatory Costs

1 This cost element is associated with the Petitioner's Legal Fees and Regulatory  
2 Consulting fees. The legal fees are associated with the Petitioner's attorneys. The  
3 anticipated fees are associated with reviewing the legal aspects of LNP filings and  
4 LNP implementation. The regulatory consulting fees are typically associated with  
5 the updates required to various National databases (NECA Tariff 4, Telcordia  
6 LERG, etc.) and the possible assistance with the completion of the NECA End User  
7 Charge worksheets. This cost is estimated at 100 hours at an average rate of \$150  
8 per hour and includes travel, living, and miscellaneous expenses. Based on the  
9 legal activities required to implement LNP, the Petitioner may revise this figure at a  
10 later date.

11 Customer Care Costs

12 The implementation of LNP will require Santel to implement new customer care  
13 policies and procedures. The non-recurring customer care cost estimates were  
14 based on providing LNP customer care training for the Petitioner's administrative  
15 personnel. The training is assumed to be provided by the entity providing the  
16 Petitioner's billing platform services. The Petitioner has not developed the  
17 Customer Care and Billing processes for LNP at this time. The costs estimates are  
18 based on a one-week onsite Operational Support Services (OSS) training class. The  
19 recurring customer care cost estimates were based on one-half (1/2) hour per port at  
20 the Petitioner's loaded administrative labor costs of \$46 per hour. This cost  
21 estimate addresses the anticipated administrative activities required with updating  
22 the Petitioner's customer care and billing system and to track the "ported out" DNs.

1           Marketing and Informational Flyer Cost Estimates

2           The implementation of LNP will likely generate subscriber confusion from the  
3           addition of an End User Charge for the implementation of LNP. The Petitioner  
4           plans to develop an informational flyer to help educate the subscriber base by  
5           explaining LNP and the reasons for the proposed LNP End User Charge appearing  
6           on the subscribers' monthly local service bill. The non-recurring marketing and  
7           informational flyer cost estimates were based on the costs required to develop an  
8           informational flyer and billing insert explaining LNP and any end-user fees that  
9           may apply. The total non-recurring estimated costs in this category were expressed  
10          as a "per access line" cost and were estimated at approximately \$3 per subscriber.  
11          This cost estimate includes the development of the explanatory LNP text, the  
12          graphic design artwork, and first run printing costs. The recurring marketing and  
13          informational flyer cost estimates were based on approximately \$3 per subscriber  
14          per year for volume print costs, handling, and mailing the periodic flyer/bill insert.  
15          This recurring marketing/informational flyer cost estimate was amortized over 12  
16          months to arrive at an estimated monthly fee for the Cost Exhibit.

17          Billing/Customer Care Software Updates

18          The Petitioner's billing and customer care system will require software upgrades to  
19          support LNP. The non-recurring billing and customer care software upgrade cost  
20          estimates represents the anticipated costs to upgrade the Petitioner's billing system  
21          to accommodate LNP functionality. This upgrade was estimated as an allocated  
22          cost of the Petitioner's annual billing system upgrade

1           **Transport-Related Cost Estimates**

2           The cost elements in this category include the estimated costs of transport to  
3           connect the Petitioner's exchange with the CMRS carriers, anticipated cost  
4           estimates for transiting CMRS connections, and anticipated cost estimates for pass-  
5           through N-1 Tandem LNP queries. As part of the cost estimates provided with the  
6           Santel Waiver Petition, the cost estimates for this category are detailed as follows:

7           Transport Cost Estimates

8           The Petitioner will require direct Type 2B DS1 transport facilities from the  
9           Petitioner's exchange to each CMRS provider's Point of Interconnection (POI) for  
10          those CMRS carriers requesting intermodal LNP. The Petitioner does not possess  
11          POI information for each CMRS carrier. The non-recurring wireless carriers POI  
12          cost estimates represent the costs associated with providing a Type 2B DS1 span to  
13          each CMRS provider. As stated in the Petition, the Petitioner assumes  
14          interconnection will be required with four (4) CMRS carriers. The Petitioner  
15          estimates that the non-recurring transport costs for each CMRS will be  
16          approximately \$5,000 per exchange. This cost estimate includes the switch DS1  
17          interface hardware and supporting equipment required to place a DS1 span into  
18          service. The recurring wireless carriers POI cost estimates were based on monthly  
19          transport lease cost estimates. As stated in the Petition, the Petitioner assumes  
20          interconnection will be required with four (4) CMRS carriers. These cost estimates  
21          were based on oral conversations with SDN Communications. The estimates  
22          assume that the recurring transport costs for each Type 2B DS1 will average \$800

1 per month. Santel plans to revise this recurring transport cost estimate once POI  
2 information is provided by the CMRS carriers and firm pricing can be provided by  
3 a transport provider (such as SDN Communications or Qwest).

4 Mobile Telephone Switching Office (MTSO) POI Connection Cost Estimates

5 The Petitioner does not possess POI information for the CMRS carriers that have or  
6 will likely to provide a Bona Fide Request (BFR) to the Petitioner for intermodal  
7 LNP. The possibility exists that a transiting carrier (such as Qwest or SDN  
8 Communications) may establish Type 2B DS1 connections with one or more of the  
9 CMRS carriers. The MTSO POI connection cost estimates represent the anticipated  
10 costs for the Petitioner's share of this connection, if required. The non-recurring  
11 MTSO POI connection cost estimates were based on an estimate of the start-up  
12 costs to utilize a transiting carrier for CMRS MTSO connections, if required. The  
13 recurring MTSO POI connection cost estimates were based on the Petitioner's  
14 anticipated share of monthly lease for the transiting carrier MTSO POI connection  
15 cost estimates, if required. If the CMRS carriers elect to directly connect with the  
16 Petitioner (without a transiting carrier) on a direct Type 2B DS1 connection to the  
17 CMRS' Mobile Switching Telephone Office (MTSO), these cost estimates will  
18 likely be not applicable.

19 Transiting Non-Recurring Dip (Minimum) Cost Estimates

20 This cost estimate was based on the assumption that a transiting carrier may need to  
21 perform some LNP queries when the Petitioner's N-1 carrier fails to do so. The  
22 transiting non-recurring dip cost estimate describes the anticipated costs of the non-

1 recurring set-up charges to enable the Petitioner to receive “pass-through” dip  
2 charges from a transiting carrier, such as SDN Communications. The initial setup  
3 charges are likely to be passed on to Petitioner. Santel has estimated this cost  
4 estimate to be \$500. The transiting carrier recurring dip cost estimates describe the  
5 anticipated costs of the minimum dip charges from a transiting carrier. These  
6 charges are likely to be passed on to Petitioner. Santel has estimated this cost  
7 estimate to be \$100 per month. If the CMRS carriers elect to directly connect with  
8 the Petitioner (without a transiting carrier) on a direct Type 2B connection to the  
9 CMRS’ Mobile Switching Telephone Office (MTSO), these cost estimates will  
10 likely be not applicable.

11 **Q: It appears that one of the larger estimated costs projected for the**  
12 **implementation of Intermodal LNP relates to transport costs. What**  
13 **considerations concerning compensation for transport costs are applicable to**  
14 **the implementation of Intermodal LNP?**

15 A: With regard to the direct Type 2B DS1 connections to the wireless carriers  
16 described in the preceding cost estimates, these cost estimates are identified as  
17 required connections to allow Intermodal LNP to function correctly within the  
18 Petitioner’s existing billing and customer care systems.

19 **Q: If no direct Type 2B DS1 facilities are available for interconnection with the**  
20 **CMRS carriers, what happens for Santel?**

21 A: Without direct Type 2B facilities, the ported calls will be routed based on the Local  
22 Routing Number (LRN) delivered with the LNP query. The LRN will contain the

1 NPA-NXX of the wireless carrier. Based on this NPA-NXX, these calls will be  
2 routed as toll calls over Santel's existing toll routes to Santel's Access Tandem  
3 (SDN Communications).

4 **Q: In your opinion, are the proposed Type 2B DS1 facilities to each CMRS carrier**  
5 **cost justified?**

6 A: Without actual traffic data, it is impossible to determine the feasibility of a  
7 particular facility. However, based on the anticipated traffic levels generated by the  
8 projected intermodal LNP ports, it appears that the construction of these facilities is  
9 not cost-justified. If the facilities were feasible, it is likely that the wireless carriers  
10 would have implemented them already as they have in other areas. Based on the  
11 projected traffic levels, it appears that the direct facilities between Petitioner and the  
12 wireless carriers required for LNP would be highly under-utilized and very  
13 inefficient.

14 **Q: It appears that some of the anticipated cost estimates are based on the quantity**  
15 **of anticipated numbers that would be ported to a CMRS carrier. How was the**  
16 **number of ports determined?**

17 A: The quantity of projected ports is a function of the competitive environment in the  
18 proposed service area, the number of CMRS carriers, and other statistical data. The  
19 data that is currently available concerning porting activity for CMRS carriers on a  
20 wide-scale basis is limited. It is my understanding that no Petitioner customer has  
21 ever made an inquiry to Petitioner regarding LNP or a request for LNP. With  
22 respect to wireless LNP nationwide, to date, the demand for wireless porting has

1           been far less than expected and most ports have been from one wireless carrier to  
2           another. Wireline to wireless porting appears to be a small fraction of wireless  
3           porting in general.<sup>1</sup> According to NeuStar, 95% of wireless ports have been from  
4           one wireless carrier to another and only 5% of wireless ports were between wireline  
5           and wireless carriers.<sup>2</sup> With lack of ubiquitous quality and incomplete coverage of  
6           the Petitioner's existing service area by the existing wireless carriers, I believe that  
7           the percentage would be even smaller than in other more urban parts of the nation.  
8           For purposes of the cost exhibit, approximately one (1) intermodal port per year  
9           was estimated<sup>3</sup> which is well under the five (5) percent of the Petitioner's access  
10          lines. Accordingly, there appears to be little, if any, demand for LNP and, absent  
11          such demand, no public benefit will be derived from LNP. Even if some level of  
12          LNP demand develops in the future, the total implementation costs that would be  
13          incurred by Petitioner to implement and maintain LNP would require re-evaluation  
14          based on the customer demand, quantity of ports, and the revised estimated costs for  
15          the required LNP infrastructure elements.

16   **Q: Will any of the Petitioner's estimated costs change if the number of estimated**  
17   **ports is changed?**

18   A: Yes. There are several of the estimated recurring costs that are driven by the  
19   number of ports. These cost elements include the recurring translations costs, the

---

<sup>1</sup> See "Survey Finds Little Impact From LNP", *RCR Wireless News*, February 9, 2004 ed., reporting that according to a consumer survey report from CFM Direct, very few telecommunications customers have switched their wireline phone numbers to wireless.

<sup>2</sup> See NARUC Notebook, *Communications Daily*, Vol. 24, No. 46, p. 4 (March 9, 2004)

1 recurring testing and verification of each ported number, the recurring  
2 administrative cost estimates, and the recurring customer care costs. If the  
3 projected number of ports increases, these costs will increase. If the number of  
4 projected ports decreases, these costs will decrease.

5 **Q: The current porting interval is currently four (4) days. If the porting interval**  
6 **were shortened to two (2) days or less, what effect, if any, would this shortened**  
7 **interval have on the estimated costs?**

8 A: The current industry experience with Intermodal porting is has not been without  
9 implementation issues. Significant problems meeting the current four (4) day  
10 porting interval have been reported. Assuming that the implementation issues are  
11 refined to the point where a shorter porting interval can be supported, the Petitioner  
12 has included the known cost elements to support a shorter porting interval. The  
13 Petitioner has assumed the use of an automated SOA system as part of their  
14 anticipated LNP implementation costs. An automated SOA system will allow the  
15 Petitioner to accommodate an electronic request and acknowledgement for the  
16 ported numbers. Therefore, the Petitioner does not anticipate any increases in its  
17 SOA related non-recurring or recurring cost estimates.

18

---

<sup>3</sup> While actual industry figures are not available, most wireless carriers are currently experiencing a porting rate of between three percent (3%) and six percent (6%). Of these ports, it is estimated that between one percent (1%) and three percent (3%) are intermodal.

1           It is possible that additional recurring costs in the areas of translations, technical  
2           implementation, testing, verification, customer care, and administrative would  
3           occur if the porting interval were to be reduced to require that porting activities  
4           occur outside of the standard business day (expedited requests, nights, weekends,  
5           and holidays). If porting is required during these times, additional loaded labor  
6           rates will be incurred. If the porting requirements are confined to the standard  
7           business day, the Petitioner does not anticipate any additional recurring LNP costs.  
8           However, it is possible that unforeseen requirements could require additional  
9           charges.

10       **Q: Are there any other potential costs that could impact Santel with the**  
11       **implementation of Intermodal LNP?**

12       A: If Santel must implement intermodal LNP, all carriers with EAS arrangements with  
13       Santel and their customers will be impacted because the other carrier will have to  
14       LNP dip all EAS calls. This would increase the cost of EAS between Santel and the  
15       other carrier and could result in a loss of EAS options to the customer or an increase  
16       in the cost of optional EAS service.

17       **Q: Some telecommunications industry analysts have suggested that Foreign**  
18       **Exchange Service (FX) could be used to provide connections to accommodate**  
19       **intermodal LNP. Is this a reasonable alternative?**

20       A: There have been industry discussions of using an FX service for Intermodal LNP  
21       interconnection. An FX service is a line appearance that is extended from the  
22       “home” exchange to a “foreign” exchange using dedicated point-to-point facilities.

1 The FX service is engineered on a per line basis. It is not a common trunk that can  
2 be used by a carrier for routing purposes. With an FX service, the LEC has  
3 customers and facilities in one rate center and provides service to customers in  
4 another rate center using the same "home" number block. To do this, facilities are  
5 extended from the LEC rate center to the foreign rate center where the customer  
6 resides. It is important to note that the customer pays for the use of these facilities.  
7 The LEC is compensated for their facilities and lost toll revenue through these  
8 customer charges. It is unknown exactly how an ILEC would implement an FX  
9 service to accommodate Intermodal LNP. The exact connectivity, rate elements,  
10 and network configuration for the proposed Intermodal LNP FX service appear to  
11 be undefined. As such, any discussion of using FX as a viable transport alternative  
12 for Intermodal LNP transport is purely speculation.

13 **Q: You have addressed several estimated costs for Intermodal LNP. How would**  
14 **these cost estimates change if the Petitioner must implement only Intramodal**  
15 **(wireline to wireline) LNP?**

16 **A:** All cost elements would stay the same, but the amount of the cost estimates could  
17 change. It is my understanding that both wireline providers would be in the same  
18 rate center. Accordingly, the primary change in the estimated costs would be in the  
19 area of transport costs. The petitioner estimates that these costs would likely be  
20 significantly reduced. Intramodal LNP has clearly defined processes for the  
21 exchange of traffic between the respective wireline carriers competing in a clearly  
22 defined rate center. In the intramodal LNP cases with which I am familiar, the

1 carriers have entered into an Interconnection Agreement. The Intramodal  
2 Interconnection Agreement addresses the methods and compensation that will be  
3 used to establish interconnection and exchange traffic between the wireline carriers.  
4 The compensation for the traffic volumes is typically in the form of reciprocal  
5 compensation. In addition, the recurring costs for testing of each ported number  
6 would likely be reduced since the dialing plans and routing between the carriers will  
7 likely not change on a regular basis. The reduction of these costs is dependent upon  
8 the volume of ports. The remaining costs will likely be unchanged.

9 **Q: What would be the timeframe required for the Petitioner to fully implement,**  
10 **test and place Intermodal LNP into commercial service, if required to do so?**

11 A: Please refer to the LNP Implementation Timeline, attached hereto as Exhibit [2].  
12 The Timeline details the individual, inter-dependent tasks necessary to fully  
13 implement Intermodal LNP. They are arrayed in a self-explanatory fashion,  
14 showing the anticipated duration of each task and its relationship to other tasks.  
15 The overall duration that results for the Timeline supports that approximately six  
16 (6) months would be required to fully prepare for, implement, test and place  
17 Intermodal LNP into commercial service, as stated in the Santel Waiver Petition.  
18 As with any planning horizon, this timeline does not take into account holidays or  
19 other unforeseen delays due to Force Majeure.

20

1    **Q: Does this conclude your direct testimony?**

2    A: Yes. I also reserve the opportunity to revise or modify this pre-filed direct  
3       testimony at or before the hearing if I receive additional information pertaining to  
4       the issues I presented herein.

## SANTEL COMMUNICATIONS COOPERATIVE, INC.

## ESTIMATED COSTS TO IMPLEMENT LOCAL NUMBER PORTABILITY

	<u>Non- Recurring</u>	<u>Monthly Recurring</u>	
<b><u>Switch-Related Investment Costs:</u></b>			
LNP Software Features	\$ 20,560		
Feature Activation	\$ 5,000		
Translations	\$ 10,000		Initial LNP Basic Translations Costs
Technical Implementation and Testing	\$ 10,000		
<b>Subtotal</b>	<b>\$ 45,560</b>		
<b><u>NPAC-Related Costs:</u></b>			
Service Order Administration	\$ 2,000	\$ 500	
LNP Queries	\$ 500	\$ 600	
Connection Costs w/LNP Database	\$ 150	\$ -	
<b>Subtotals</b>	<b>\$ 2,650</b>	<b>\$ 1,100</b>	
<b><u>Technical/Administrative Costs:</u></b>			
Testing/Verification of Each Ported Dial Number	\$ -	\$ 3	Testing/Verification of Ported Dial Number(s)
Translations	\$ -	\$ 4	Translations Costs - Ported Numbers
Administrative	\$ 10,000	\$ 4	
Regulatory	\$ 15,000	\$ -	
Customer Care	\$ 10,000	\$ 2	
Marketing/Informational Flyer	\$ 15,000	\$ 1,200	
Billing/Customer Care Software Upgrades	\$ 5,000	\$ -	
<b>Subtotals</b>	<b>\$ 55,000</b>	<b>\$ 1,213</b>	
<b><u>Transport-Related Costs:</u></b>			
Wireless Carrier Points of Interconnection (POI) <sup>1</sup>	\$ 200,000	\$ 32,000	
Mobile Telephone Switching Office POI Connection	\$ 500	\$ 200	Transiting Carrier MTSO POI Connection
Dip (Minimum)	\$ 500	\$ 100	Transiting Carrier Dip Charges (Minimum)
<b>Subtotals</b>	<b>\$ 201,000</b>	<b>\$ 32,300</b>	
<b>Total Estimated Costs Associated with LNP Implementation</b>	<b>\$ 304,210</b>	<b>\$ 34,613</b>	
<b>Current Access Lines</b>	<b>4,827</b>	<b>4,827</b>	
<b>Total Estimated Costs Per Access Line (Rounded)</b>	<b>\$ 64</b>	<b>\$ 8</b>	
<b>Access Line Impact - First 60-Month Period</b>		<b>\$ 9</b>	

**Note 1:**

Potentially, the Petitioner can expect to receive requests for Interconnection from 4 wireless carriers (Verizon Wireless, Western Wireless, Sprint PCS, and Nextel). All of these carriers have their wireless switching equipment in separate locations. In order to provide interconnection to these carriers, the Petitioner is including transport cost estimates from each of their switches to these 4 wireless carriers. Petitioner has estimated these transport costs based on the existing network architecture configuration of these wireless carriers, which requires a dedicated facility from each Petitioner switch to the wireless carrier. This configuration is required to resolve the transport and routing issues caused by the implementation of LNP when the wireless carrier does not have a point of interconnection or numbers in the LEC's rate centers.

LNP Implementation Timeline

ID	Task Name	Responsibility	Start	Finish	Sep 2004					Oct 2004					Nov 2004					Dec 2004			Jan 2005			Feb 2005			Mar 2005

**Q: Please state your name and business address.**

A: My name is Rod Bowar, and my business address is P.O. Box 158, 220 South Main, Kennebec, SD 57544. My business telephone number is (605) 869-2220.

**Q. By whom are you employed and in what capacity?**

A. I am the General Manager of Kennebec Telephone Company (“Kennebec”). Kennebec is a rural independent local exchange carrier that provides local exchange, exchange access and other telecommunications services to subscribers within its South Dakota service area, which includes the exchanges of Kennebec and Presho. As of December 31, 2003, Kennebec provided service to 751 total access lines, 31 of which receive Lifeline service.

**Q: On whose behalf are you presenting testimony?**

A: I am presenting testimony on behalf of Kennebec.

**Q: What is the purpose of your testimony in this proceeding?**

A. The purpose of my testimony is to explain how the implementation of wireline-to-wireless local number portability (“LNP”) would impact the consumers of Kennebec. Specifically, I will review the results of a survey that was conducted for Kennebec, which indicates that the overwhelming majority of our customers do not want wireline-to-wireless LNP at any price. I will also provide demographic information on Kennebec’s customers such as age and income distributions. This information further indicates the adverse economic impact that would occur on Kennebec’s customers if wireline-to-wireless LNP were to be implemented.

1 **Q. Please describe how you gathered information regarding the opinions of**  
2 **Kennebec's consumers about the implementation of wireline-to-wireless**  
3 **LNP.**

4 A. Kennebec commissioned TELEC Consulting Resources, Inc. to conduct a survey  
5 of its consumers. The survey was developed, administered, and analyzed by Ms.  
6 Sue Vanicek. Ms. Vanicek has conducted numerous surveys on telecommunica-  
7 tions issues in her position as a Senior Consultant at TELEC Consulting Re-  
8 sources, Inc., as well as in her previous employment at Lincoln Telephone/Aliant  
9 Communications. I worked with Ms. Vanicek throughout the process, including  
10 discussing the information we would want to collect in a survey, and approving  
11 the questionnaire prior to its distribution.

12 **Q. How was the survey conducted?**

13 A. A questionnaire was mailed to each of Kennebec's residential and business cus-  
14 tomers during January, 2004. A total of 575 surveys were mailed, and 208 sur-  
15 veys were returned, for a response rate of 36 percent. A postage-paid return enve-  
16 lope was included with the questionnaire, so that consumers would incur no costs  
17 in completing the survey. The survey explained how wireline-to-wireless LNP  
18 would function, and that consumers would pay a monthly surcharge for five years  
19 so that Kennebec could recover the costs of LNP implementation if it were of-  
20 fered.

21 **Q. How reliable is the survey?**

22 A. Ms. Vanicek indicated that based on the number of returned surveys out of the to-  
23 tal mailed, the margin of error for this survey is  $\pm 4.3$  percent at the 95 percent

1 level of confidence. This means that if the survey were conducted 100 times, 95  
2 out of 100 times the results would be within  $\pm$  4.3 percent of the results generated  
3 by this survey.

4 **Q. How willing are consumers to pay an LNP surcharge in order to have wire-**  
5 **line-to-wireless LNP available to them?**

6 A. Only about one-fifth of Kennebec's customers (21.4 percent) said that they would  
7 be willing to pay a surcharge of \$0.50 per month for LNP. When asked if they  
8 would be willing to pay a surcharge of \$1.00 per month, the proportion dropped to  
9 11.8 percent, or about one in ten customers. When asked if they would be willing  
10 to pay a surcharge of \$2.00 per month, the proportion dropped to 2.6 percent, or  
11 about one in forty customers. Only 1.6 percent of Kennebec's customers said  
12 they would be willing to pay a surcharge of \$3.00 per month for LNP.

13 **Q. What other information did the survey reveal?**

14 A. About three-quarters of the survey respondents (73.4 percent) said they have a  
15 wireless telephone. Therefore, if the South Dakota Public Utilities Commission  
16 ("Commission") ordered Kennebec to provide wireline-to-wireless LNP, about  
17 one-fourth of Kennebec's customers would be paying a charge for a feature they  
18 would never use, because they do not own a wireless phone to which they could  
19 port their landline telephone number.

20 **Q. What types of comments did Kennebec's consumers make on wireline-to-**  
21 **wireless LNP?**

22 A. At the end of the survey we asked consumers to provide any written comments  
23 they wished to make on wireline-to-wireless LNP. There were three common

1 themes in the responses. One theme was that Kennebec's customers do not want  
2 to pay for a service that they would not use. A second common theme was that  
3 wireless service was poor or nonexistent in many of the areas served by Kenne-  
4 bec. A third theme contained in the comments was that customers thought rates  
5 were high enough and did not want to see any rate increases.

6 **Q. Do you have any other observations on the comments you received from**  
7 **Kennebec's consumers?**

8 A. Yes. I understand that the Federal Communications Commission ("FCC") has  
9 stated that wireline-to-wireless LNP is a benefit to consumers. However, com-  
10 ments we received included responses such as "THIS IS GOV. SHORTSIGHT-  
11 EDNESS" and "stupid." I think these comments indicate that not all consumers  
12 agree with the FCC that wireline-to-wireless LNP is beneficial.

13 **Q. Have any subscribers requested LNP from your company?**

14 A. No, we have had no subscriber requests for LNP.

15 **Q. Have any wireline carriers requested LNP from your company?**

16 A. No, we have received no requests for LNP from wireline carriers.

17 **Q. Have any wireless carriers submitted requests for LNP?**

18 A. Yes.

19 **Q. How much time would be required for your company to provide LNP,**  
20 **if ordered by the Commission?**

21 A. Kennebec has not completed a specific implementation time line yet, but  
22 Implementation takes a considerable amount of time.

1 **Q. Please describe what demographic information reveals about Kennebec's**  
2 **customers.**

3 A. The areas served by Kennebec are composed of consumers who are older and  
4 have lower incomes than the nation as a whole. For example, one in five resi-  
5 dents (20.4 percent) of Kennebec and Presho are 65 or older as of the 2000 Cen-  
6 sus of Population. This compares to about one in eight people (12.4 percent) in  
7 the United States in that same age group. About three in ten households (28.3  
8 percent) in Kennebec and Presho have incomes of less than \$20,000 per year, ac-  
9 cording to the 2000 Census. This compares with about two in ten households  
10 (22.1 percent) in the United States in that same range of income.

11 **Q. What does this demographic data indicate in terms of the impact of a possi-**  
12 **ble LNP surcharge and/or other rate increases to recover the cost of LNP**  
13 **implementation on Kennebec's customers?**

14 A. Many elderly households are on fixed incomes. Because Kennebec serves a  
15 greater proportion of elderly than the national average, an LNP surcharge or other  
16 rate increases to recover the cost of LNP implementation could cause a greater  
17 burden on Kennebec's customers than occurs in the nation as a whole. This same  
18 statement regarding the burden on Kennebec's customers is also true with regard  
19 to income. Because Kennebec serves a greater proportion of households with low  
20 incomes than the nation as a whole, the burden imposed by an LNP surcharge or  
21 other rate increases related to LNP implementation will cause a greater burden on  
22 Kennebec's consumers.

1 **Q. Based on the survey results, the lack of requests for LNP, and the demo-**  
2 **graphic data for Kennebec, what do you expect your customer's reaction**  
3 **would be to any new LNP fees that might be added to their bills?**

4 A. Based on the combination of the vast majority of customers stating they do not  
5 want to pay an LNP surcharge, the customer comments indicating that they do not  
6 want to pay for a service that they will not use, the lack of customer requests for  
7 LNP, and the data demonstrating that Kennebec serves more elderly and low-  
8 income customers than the nationwide average, I would expect a very negative  
9 reaction from customers to the addition of charges on their bill to pay for LNP.

10 **Q. Based on the survey data and demographic data, what is your conclusion**  
11 **generally about the impact of the implementation of wireline-to-wireless**  
12 **LNP on Kennebec's customers.**

13 A. I believe that requiring Kennebec to implement wireline-to-wireless LNP would  
14 result in an adverse economic impact on Kennebec's customers. This is one of  
15 the factors to be considered in a petition for a suspension or modification of Sec-  
16 tion 251(b)(2) of the Telecommunications Act of 1996, as discussed in Mr. Wat-  
17 kins' testimony. As I explained, the vast majority of consumers in Kennebec's  
18 service area do not want to pay an LNP surcharge of \$0.50 or more. Further-  
19 more, Kennebec serves a greater proportion of the population that is older and  
20 has lower incomes than the national average, making any LNP surcharge and  
21 other costs that may be passed on to consumers an even greater burden.

22 **Q. How should the Commission proceed in this matter?**

1 A. As demonstrated in my testimony and the testimony of Messrs. Watkins, Davis,  
2 and Bullock, Kennebec has met the criteria set forth in 47 U.S.C. Section  
3 251(f)(2)(A). In addition, the suspension requested in this proceeding is consis-  
4 tent with the public interest, convenience and necessity requirement set forth in 47  
5 U.S.C. Section 251(f)(2)(B) as is more specifically addressed in Mr. Watkins' tes-  
6 timony. Therefore, I believe Kennebec has met its burden of proof under 47  
7 U.S.C. Section 251(f)(2), and the Commission should grant Kennebec's petition  
8 for suspension or modification.

9 Kennebec requests suspension of the LNP requirement until there is evidence of  
10 reasonable demand for LNP, and until the per-line cost of LNP is reduced. At a  
11 minimum suspension should be granted until six months following the FCC's full  
12 and final disposition of the issues associated with the porting interval and the  
13 routing of calls between wireline and wireless providers, at which time Kennebec  
14 may need to seek further Section 251(f)(2) relief based upon the economic impact  
15 of these decisions.

16 **Q. Does this conclude your testimony?**

17 A. Yes, it does.

**RECEIVED**

BEFORE THE PUBLIC UTILITIES COMMISSION

JUN 15 2004

OF THE STATE OF SOUTH DAKOTA

**SOUTH DAKOTA PUBLIC  
UTILITIES COMMISSION**

IN THE MATTER OF THE PETITION  
OF KENNEBEC TELEPHONE COM-  
PANY FOR SUSPENSION OR MODIFI-  
CATION OF § 251(b)(2) OF THE COM-  
MUNICATIONS ACT OF 1934 AS  
AMENDED

Docket No. TC04-025

REBUTTAL TESTIMONY OF

ROD BOWAR

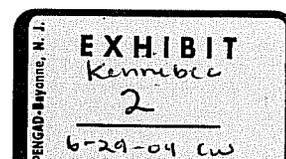

**REBUTTAL TESTIMONY OF**

**ROD BOWAR**

**ON BEHALF OF**

**KENNEBEC TELEPHONE COMPANY**

**June 14, 2004**

1 Q. Please state your name, business name and address.

2 A. **My name is Rod Bowar. I am the General Manager of Kennebec Telephone Com-**  
3 **pany (“Kennebec”), whose address is 209 South Main, Kennebec, South Dakota**  
4 **57544.**

5 Q. What is the purpose of your testimony?

6 A. **I will provide rebuttal testimony to various statements made by Ron Williams in his**  
7 **testimony filed on May 28, 2004 on behalf of WWC License L.L.C. (Western Wire-**  
8 **less).**

9 Q. At page 6, lines 8-10, Mr. Williams alleges that the Petitioners “waited 4 months to seek  
10 a suspension of their LNP obligations, hopeful that this tactic would result in delay of  
11 their legal obligations.” How do you respond?

12 A. **I dispute Mr. Williams’ characterization of events as baseless and inflammatory.**  
13 **Once the FCC made it clear that wireline carriers would be required to port num-**  
14 **bers to wireless carriers in areas outside the top 100 MSAs by May 24, 2004, Ken-**  
15 **nebec took immediate steps to investigate the cost and the processes involved with**  
16 **LNP and to explore its legal options. Because Kennebec had no experience with**  
17 **LNP, it took time to gather the pertinent information and to make the decision to**  
18 **seek a suspension of the requirement from the Commission. Further, the suspension**  
19 **petition itself took time and effort to prepare because Kennebec wanted to present**  
20 **as complete a petition as possible, accompanied by cost information as complete as**  
21 **possible.**

22 Q. Do you agree with Mr. Williams’ statement at page 14, lines 19-22, in which he states  
23 that “LECs will need to route a call to a ported number to the serving tandem” and to Mr.  
24 Williams’ statement at page 15, lines 1-4 when he discusses the routing of allegedly “lo-  
25 cal calls?”

1    **A. I believe that Mr. Williams' statement is not consistent with the interconnection**  
2       **agreement signed by Kennebec and Western Wireless. Pursuant to that agreement,**  
3       **Kennebec did not agree to route traffic destined for Western Wireless to the serving**  
4       **tandem. Rather, traffic terminating to Western Wireless is routed to an interex-**  
5       **change carrier. Therefore, it appears that Western Wireless' argument really is a**  
6       **bad faith attempt to change the agreement between the parties.**

7    **Q. At page 19, lines 8-10, Mr. Williams states that it is his belief that "the FCC views that it**  
8       **is the originating carrier's responsibility to deliver local traffic for termination and that**  
9       **the costs associated with fulfilling that responsibility are not a number portability cost."**  
10       **What is your response to this statement?**

11   **A. Mr. Williams' statements are inconsistent and should be rejected. First he argues**  
12       **that Kennebec should be required to install new facilities to deliver ported calls to**  
13       **Western Wireless and then he argues that the cost of those facilities are not number**  
14       **portability costs. Further, as discussed at lines 1-6 above, Mr. Williams' suggestion**  
15       **that it is Kennebec's responsibility to deliver traffic destined to Western Wireless**  
16       **through a serving tandem is not consistent with the interconnection agreement be-**  
17       **tween Kennebec and Western Wireless.**

18   **Q. At page 20, lines 13-16, Mr. Williams states that "[t]he routing methods proposed by the**  
19       **Petitioners are inefficient in that they make little or no utilization of existing equipment**  
20       **and shared facilities currently used to exchange calls with other carriers." How do you**  
21       **respond?**

22   **A. The routing methods reflected in the cost exhibit attached to Kennebec's Petition**  
23       **are based on the current routing arrangements that Kennebec has in place with**  
24       **other carriers, namely, calls that are dialed on a local 7-digit basis are routed via di-**  
25       **rect connections. Therefore, if calls to numbers ported to a carrier are to be dialed**

1 on a local 7-digit basis, a direct connection needs to be established between the car-  
2 riers.

3 Q. Would Western Wireless' routing proposal have impacts to Kennebec beyond LNP?

4 A. Yes. It is my understanding that Western Wireless' proposal would increase Ken-  
5 nebec's costs. First, Western Wireless' proposal would require Kennebec to pay for  
6 new facilities to the tandem provider that it does not need for any purpose other  
7 than to route calls to ported numbers to wireless carriers. Second, Kennebec would  
8 most likely have to pay transit traffic charges to the tandem provider for transport-  
9 ing the traffic to the wireless carriers.

10 Q. Is there any other impact?

11 A. Yes. It appears that Western Wireless' proposal would create a regulatory arbi-  
12 trage scenario that could lead to the loss of access revenues. Today, certain calls to  
13 wireless carriers are routed to interexchange carriers. For example, if Kennebec  
14 Customer A calls Western Wireless Customer B, Kennebec Customer A incurs a toll  
15 charge. However, under Western Wireless' proposal, it is my understanding that if  
16 Kennebec Customer A calls Western Wireless Customer B who now has a number  
17 ported from Kennebec, Kennebec Customer A would be charged for a local call.  
18 Customers may be encouraged to "give up" their existing wireless numbers and ob-  
19 tain wireline numbers for the sole purpose of porting that number to avoid toll  
20 charges. This is not only a bad public policy result, but also simply a bad faith at-  
21 tempt to avoid an important contract provision upon which Western Wireless has  
22 already agreed with our company.

23 Q. Does this conclude your rebuttal testimony?

24 A. Yes.

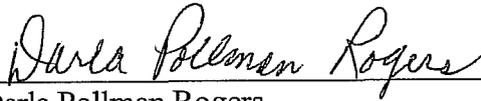

**CERTIFICATE OF SERVICE**

The undersigned hereby certifies that she served a copy of the foregoing **REBUTTAL TESTIMONY** upon the persons herein next designated, on the date below shown, by depositing a copy thereof in the United States mail at Pierre, South Dakota, postage prepaid, in an envelope addressed to each said addressee, to-wit:

OF THE STATE OF SOUTH DAKOTA

---

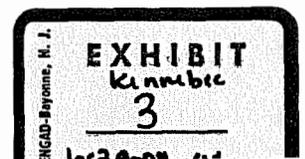

IN THE MATTER OF THE PETITION  
OF KENNEBEC TELEPHONE COM-  
PANY FOR SUSPENSION OR MODIFI-  
CATION OF § 251(b)(2) OF THE COM-  
MUNICATIONS ACT OF 1934 AS  
AMENDED

Docket No. TC04-025

---

**DIRECT TESTIMONY OF DAN DAVIS  
ON BEHALF OF KENNEBEC TELEPHONE COMPANY  
REGARDING COMPANY-SPECIFIC COST DATA**

May 14, 2004

1  
2  
3 **DIRECT TESTIMONY OF DAN DAVIS**  
4 **ON BEHALF OF KENNEBEC TELEPHONE**  
5 **REGARDING COMPANY-SPECIFIC COST DATA**

6 **Q1. Please State your name, Employer, Business Address and Telephone Num-**  
7 **ber.**

8 A. My name is Dan Davis. I am employed with TELEC Consulting Resources Inc.  
9 My business address is 233 South 13<sup>th</sup> Street, Suite 1225, Lincoln Nebraska,  
10 68508.

11 **Q2. On whose behalf are you testifying?**

12  
13 A. I am testifying on behalf of the Company identified in the caption of the docket  
14 set out above. I will refer to this Company as the "RLEC".

15 **Q3. Have you provided your background information and an explanation of your**  
16 **role in this Docket in the "companion" testimony that has been offered in this**  
17 **Docket?**

18 A. Yes, I have.

19 **Q4. Did you prepare Exhibit 1 to the Petition of the RLEC filed in this Docket?**

20 A. Yes, in conjunction with members of the professional staff of TELEC, I was re-  
21 sponsible for the preparation of Exhibit 1 as was attached to the Petition and I was  
22 also responsible for the preparation of supporting information prepared in connec-  
23 tion with the responses to the discovery requests of Western Wireless. I was also  
24 responsible for the preparation of Exhibit 2 that is attached to this testimony.

25 **Q5. In your "companion" testimony you have explained the line items that com-**  
26 **prise Exhibit 2 and the process used to compile the data that was used to de-**  
27 **velop the cost as shown on Exhibit 2. Please discuss where in your "compan-**  
28 **ion" testimony you describe this process.**

1 A. The process that was used to compile and develop the cost per line in Exhibit 2 is  
2 described on pages four through six in my “companion” testimony.

3 **Q6. What was the source of the data?**

4 A. The data was derived from the books, financial records and managers of the  
5 RLEC. Data was also obtained from switch vendors, engineering consultants, tar-  
6 iffs, service order administration service bureaus, the number portability admini-  
7 stration center, a number portability database provider, and my professional ex-  
8 perience.

9 **Q7. What was the purpose of obtaining that particular data?**

10 A. To assist me in preparing an estimate of the costs to implement LNP for the  
11 RLEC.

12 **Q8. Is this the type of data that experts in your field would ordinarily review in  
13 formulating an opinion concerning the costs of LNP?**

14 A. Yes.

15 **Q9. What use did you make of the data after you received it from the RLEC?**

16 A. I have explained the use of the data on page six of my “companion” testimony.

17 **Q10. Have you reached an opinion with a reasonable degree of professional cer-  
18 tainty as to the total non-recurring costs, excluding transport, to implement  
19 LNP that you have calculated for the RLEC that will be recovered over a 5-  
20 year recovery period through an end user surcharge?**

21 A. Yes. My opinion is that the total non-recurring costs, excluding transport, is  
22 \$98,569.00. Such costs were amortized over a recovery period of 60 months us-

1 ing a rate of return of 11.25%. The total nonrecurring costs per month, excluding  
2 transport, amortized over five years is \$2,155.00.

3 **Q11. Have you reached an opinion with a reasonable degree of professional cer-**  
4 **tainty as to the total recurring costs, excluding transport, to implement LNP**  
5 **that you have calculated for the RLEC and that will be recovered from end**  
6 **users on an ongoing monthly charge basis?**

7 A. Yes. The amount is shown on Exhibit 2, and is calculated to be \$381.00 per  
8 month.

9 **Q12. Have you reached an opinion with a reasonable degree of professional cer-**  
10 **tainty as to the total cost, excluding transport, per line per month that would**  
11 **be charged to end-users if LNP were to be implemented by the RLEC?**

12 A. Yes, The amount is shown on Exhibit 2. This amount was calculated by adding  
13 the total nonrecurring costs per month amortized over five years to the total recur-  
14 ring costs per month, both amounts excluding transport costs, and dividing this  
15 sum by the RLEC's total access lines. Surcharge and taxes were then applied to  
16 this quotient. The resulting cost per line per month was calculated to be \$3.97.

17 **Q13. Have you reached an opinion with a reasonable degree of professional cer-**  
18 **tainty as to the total LNP costs and the monthly amount recovered from each**  
19 **end-user if the FCC determines that transport costs should be included in the**  
20 **LNP costs recovered from end-users?**

21 A. Yes, These amounts are shown on Exhibit 2. The total nonrecurring and recurring  
22 costs, including transport costs, surcharges and taxes, were calculated to be

1           \$7,404.00 per month. The resulting LNP cost per line, per month, including  
2 transport, was calculated to be \$11.58.

3 **Q14. If FCC determines that transport costs should not be included in the end-**  
4 **user surcharge, will the transport cost still be incurred and who will pay**  
5 **these costs?**

6 A. Transport costs will have to be incurred to transport calls outside of the RLEC's  
7 service area. If the cost is not recovered through an end-user surcharge, and if  
8 these costs are not recovered from the wireless carrier, then the only party to pay  
9 these costs would be the RLEC.

10 **Q15. Is it your opinion that the calculations that you have just described fairly and**  
11 **reasonably describe the non-recurring and recurring costs for the RLEC to**  
12 **implement LNP and the end user charges to recover such costs?**

13 A. Yes.

14 **Q16. Does this conclude your testimony?**

15 A. Yes, it does.

16

**Kennebec Telephone Company**  
**Total Estimated LNP Non-recurring and Recurring Costs**

		With Surcharges/ Taxes
<b>LNP Non-recurring Costs</b>		
Switch Upgrade Costs	\$ 47,979	
Internal Business Procedure Changes (1)	\$ 20,426	
Inter-carrier Testing	\$ 4,088	
Other Internal Costs (2)	\$ 25,061	
LNP Query set up	\$ 190	
SOA Non-recurring set up charge (3)	\$ -	
Customer Notification Costs	\$ 825	
<b>Total Non-recurring Costs excluding transport</b>	<b>\$ 98,569</b>	
Non-recurring transport charges (4)	\$ 1,401	
<b>Total Non-recurring Costs including transport</b>	<b>\$ 99,970</b>	
<b>LNP Monthly Recurring Costs</b>		
SOA Monthly Charge	\$ 90	
LNP Query Costs per month	\$ 150	
Other Recurring Costs	\$ 141	
<b>Total Recurring Monthly Costs excluding Transport</b>	<b>\$ 381</b>	
Transport	\$ 4,837	
<b>Total Recurring Monthly Costs including Transport</b>	<b>\$ 5,218</b>	
<b>Monthly Cost Calculations per line</b>		
Total Nonrecurring cost per month excluding transport amortized over five years	\$ 2,155	
Total Nonrecurring cost per month including transport amortized over five years	\$ 2,186	
Total cost per month excluding transport	\$ 2,536	
Total cost per month including transport	\$ 7,404	
Access Lines excluding Lifeline	735	
LNP cost per line per month excluding transport (5)	\$ 3.45	\$ 3.97
LNP cost per line per month including transport (5)	\$ 10.07	\$ 11.58

(1) Cost required to analyze and modify existing processes and systems in order to receive and process a request for porting.

(2) Other internal costs include reviewing porting agreements with wireless carriers, completing trading partner profile requests from wireless carriers, completing contracts with the SOA and NPAC, and developing and filing tariffs and documentation for the LNP end-user surcharge and local rate increases.

(3) Service Order Administration (SOA) provides the functionality to interface the LEC's order and provisioning systems in order to update the Number Portability Administration Center (NPAC) for access by all other carriers. Through the use of a SOA, a company is able to submit porting information to the NPAC.

(4) Transport costs will be incurred if the FCC requires LECs to install and absorb the cost of facilities to wireless carriers in order to route calls to ported numbers on a seven-digit dialed basis.

(5) Total costs do not include system changes required to shorten the porting interval or expanding a LEC's local calling area as contemplated by the FCC in its FNPRM.

BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA

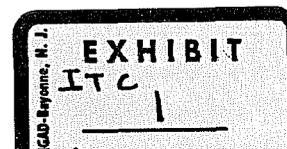

---

IN THE MATTER OF THE PETITION  
OF INTERSTATE TELECOMMUNICA-  
TIONS COOPERATIVE, INC. FOR  
SUSPENSION OR MODIFICATION OF  
§ 251(b)(2) OF THE COMMUNICA-  
TIONS ACT OF 1934 AS AMENDED

Docket No. TC04-054

**DIRECT PRE-FILED TESTIMONY OF  
JERRY HEIBERGER**

May 14, 2004

1 **DIRECT PRE-FILED TESTIMONY OF**  
2 **JERRY HEIBERGER**  
3

4 **Q: What is your name and address?**

5 A: My name is Jerry Heiberger. My business address is 312 4<sup>th</sup> St. W., Clear Lake,  
6 SD, 57226. My business telephone number is (605) 874-2181.

7 **Q: By whom are you employed and in what capacity?**

8 A: I am the General Manager of Interstate Telecommunications Cooperative (ITC).  
9 ITC is a rural independent local exchange carrier that provides local exchange,  
10 exchange access and other telecommunications services to 14,524 access lines  
11 within its South Dakota service area, which includes the 24 exchanges of:  
12 Brookings, Clark, Clear Lake, Estelline, Gary, Webster, Astoria, Bradley, Brandt,  
13 Bryant, Castlewood, Chester, Elkton, Florence, Goodwin, Hayti, Lake Norden,  
14 Nunda, Sinai, Toronto, Waubay, Wentworth, White and Willow Lake.

15 **Q: Does your company have any direct points of interconnection with any wireless**  
16 **carrier and/or does your company provide any blocks of numbers for your**  
17 **company's rate centers to any wireless carrier?**

18 A: Yes. ITC has three Type 2B direct connections with Western Wireless at  
19 Brookings (693), Clark (532) and Webster (345). Western Wireless' NXXs for  
20 these exchanges are Brookings (690), Clark (233) and Webster (265). In addition,  
21 ITC has one Type 2B connection with Verizon Wireless at Brookings (693),  
22 Verizon's NXX is (695). ITC does not provide any blocks of numbers to any  
23 wireless carrier.

24 **Q: How do the local calling areas of your exchanges compare with those of the**  
25 **wireless carriers operating in your area?**

1 A: ITC has 24 South Dakota exchanges, many of which are very rural. Our service  
2 areas are defined by where we have physical cable plant. However, the wireless  
3 carriers serve by the reach of a radio frequency from a tower site. Their wireless  
4 local calling areas are often much larger than our exchange boundaries. The  
5 boundaries of our wire/rate centers and the local calling areas of the wireless  
6 carriers serving in our area vary greatly. Many of the local calling areas of the  
7 wireless carriers are defined by either the Basic Trading Area (BTA) or  
8 Metropolitan Trading Area (MTA) boundaries, which are much larger than ITC's  
9 service area.

10 **Q: Does your company provide any Extended Area Service (EAS) plans to its**  
11 **subscribers or to a connecting carrier's subscribers?**

12 A: ITC provides optional EAS calling plans to its members. There is a flat charge for  
13 any EAS calling plan (per exchange) that the customer chooses. No free EAS is  
14 provided between any exchanges.

15 **Q: What is the current method of routing calls from your subscriber's landline**  
16 **phones to wireless phone numbers?**

17 A: As an example, when a subscriber located in Clear Lake uses his/her landline phone  
18 to call a wireless phone number, the call is routed from the subscriber's landline  
19 phone to the Clear Lake central office switch, where it is determined to be a non-  
20 local call and is therefore switched to a toll trunk group. The toll trunk carries the  
21 call to SDN Communication's (SDN) Centralized Equal Access (CEA) Tandem,  
22 which is located in Sioux Falls, to be routed to the appropriate Point of  
23 Interconnection (POI) of the wireless carrier.

1           If the call originates from an ITC customer that subscribes to an EAS  
2 exchange that has a Western Wireless, Verizon, Sprint, or RCC NXX, the call is  
3 routed via the EAS network to the appropriate wireless carrier. If the call originates  
4 from an ITC customer that is local to the exchange which has a Western Wireless or  
5 Verizon NXX, the call is routed via local trunks to the appropriate wireless carrier.  
6 All other originating calls to wireless carriers are routed via existing toll trunks to  
7 the Access Tandem at SDN Communications.

8   **Q: What is the number of wireless carriers authorized to serve in your company's**  
9   **service area?**

10 A: To my knowledge, six (6) wireless carriers are authorized to serve in ITC's service  
11 area (Verizon Wireless, Western Wireless, Sprint PCS, RCC, Midwest Wireless and  
12 Nextel).

13 **Q: Have any subscribers requested local number portability (LNP) from your**  
14 **company?**

15 A: To my knowledge, only a single ITC subscriber has inquired about Intermodal local  
16 number portability from ITC. The inquiry came after I wrote an article about LNP  
17 in my monthly column in ITC's newsletter. In addition to this ITC newsletter  
18 article about LNP, there has also been press and TV coverage in our service area  
19 about this issue after the FCC first issued its November 10 Order.

20 **Q: Since the passage of the 1996 Telecom Act have any wireline carriers ever**  
21 **requested LNP from your company?**

22 A: Yes, Midcontinent Communications has requested LNP in ITC's Webster and  
23 Waubay exchanges.

1 **Q: Have any wireless carriers submitted bona fide requests for LNP and if so**  
2 **when?**

3 A: Yes. Western Wireless (November 2003), Verizon (February 2004) and RCC  
4 (April 2004).

5 **Q: Are there any existing capital investments for broadband that will be diverted**  
6 **if your company must deploy LNP?**

7 A: Yes. DSL and broadband services are of utmost importance to our customers. Of  
8 all our new services, our customers are most interested in broadband. We are  
9 upgrading our networks to provide broadband services. Any amount of capital  
10 investment that is diverted to the implementation of LNP will reduce needed capital  
11 from broadband investments. ITC is a rural company and has limited resources to  
12 fund network investments into rural areas. We would prefer to serve the real  
13 demands of our customers rather than provide a service that has been mandated by  
14 the FCC that has very limited demand.

15 **Q: What will the impact be on ITC and its customers if it is required to provide**  
16 **wireless LNP?**

17 A: If WLNP is required, the cost of implementing intermodal LNP would significantly  
18 impact ITC and its customers. Exhibit 1(b) to the direct prefiled testimony of John  
19 DeWitte shows a non-recurring impact of \$54 per access line and a reoccurring  
20 impact of \$12 per line. This is for a service that only one customer has requested to  
21 date. There is little demand for intermodal LNP in our service area. With little  
22 demand there is a substantial burden to pay for the service. Further, the vast

1 majority of our customers would have to pay for those few who may decide to port  
2 their numbers. It's a very poor bargain for the majority of our customers.

3 **Q: In your experience as the manager of ITC have you seen increases or additions**  
4 **to the itemized fees on your customer's telephone bills?**

5 A. Yes. I have received numerous comments from ITC's customers expressing their  
6 concerns about the increased charges and fees in recent years. Most notably was  
7 the recent increase to the subscriber line charge (SLC) when it increased from \$3.50  
8 to \$6.50 after the MAG Plan was approved by the FCC.

9 **Q: What do you expect your customer's reaction to be to any new LNP fees on**  
10 **their bills?**

11 A. If ITC is basically forced to increase our customers' fees due to costs related to  
12 deploying LNP, I believe we will have many irate customers contact us and  
13 complain about the rising cost of services. In addition, I believe many customers  
14 may terminate their service with ITC if the increases are too substantial. The vast  
15 majority of our customers would gain no benefit from this service, and I expect  
16 strong protests to the ITC directors, staff and myself. The protests will be similar to  
17 the SLC increase. Many of our customers are elderly. They will be especially hard  
18 hit.

19 **Q: Do you expect that the costs of implementing intermodal LNP could create the**  
20 **necessity of a rate increase for ITC?**

21 A. Depending on what costs are recoverable in any LNP end user fees, if the remainder  
22 is significant, ITC will not be able to absorb them and may have to implement a dial  
23 tone rate increase to recover any deployment costs.

1 **Q: Do you have any concluding comments?**

2 A There are still so many unknowns regarding intermodal WLNP implementation in  
3 rural exchanges. It makes much more sense to wait for the FCC or Courts to clarify  
4 key issues, such as: 1) How are rural ILECS to interconnect with distant wireless  
5 POI? 2) What would the porting interval be? 3) If a number is ported, how would  
6 ILECs maintain the original wireline rate center when the service areas of wireline  
7 and wireless companies vary so greatly? There are so many unanswered questions  
8 it clearly makes sense to save our resources until these questions are answered.  
9 Doing so would save our customers significant dollars and help us provide services  
10 they actually want such as broadband.

11 **Q: Does this conclude your direct testimony?**

12 A: Yes. I also reserve the opportunity to revise or modify this pre-filed direct  
13 testimony at or before the hearing if I receive additional information pertaining to  
14 the issues I presented herein.

**RECEIVED**

JUN 15 2004

**SOUTH DAKOTA PUBLIC  
UTILITIES COMMISSION**

BEFORE THE PUBLIC UTILITIES COMMISSION

OF THE STATE OF SOUTH DAKOTA

IN THE MATTER OF THE PETITION  
OF INTERSTATE TELECOMMUNICA-  
TIONS COOPERATIVE, INC. FOR  
SUSPENSION OR MODIFICATION OF  
§ 251(b)(2) OF THE COMMUNICA-  
TIONS ACT OF 1934 AS AMENDED

Docket No. TC04-054

REBUTTAL TESTIMONY OF

JERRY HEIBERGER

**REBUTTAL TESTIMONY OF**

**JERRY HEIBERGER**

**ON BEHALF OF**

**INTERSTATE TELECOMMUNICATIONS COOPERATIVE, INC.**

**June 14, 2004**

1 Q. Please state your name, business name and address.

2 A. **My name is Jerry Heiberger. I am the General Manager of Interstate Telecommu-**  
3 **nications Cooperative, Inc. ("ITC"), whose address is 312 West Fourth Street, Clear**  
4 **Lake, South Dakota 57226.**

5 Q. What is the purpose of your testimony?

6 A. **I will provide rebuttal testimony to various statements made by Ron Williams in his**  
7 **testimony filed on May 28, 2004 on behalf of WWC License L.L.C. (Western Wire-**  
8 **less).**

9 Q. At page 6, lines 8-10, Mr. Williams alleges that the Petitioners "waited 4 months to seek  
10 a suspension of their LNP obligations, hopeful that this tactic would result in delay of  
11 their legal obligations." How do you respond?

12 A. **I dispute Mr. Williams' characterization of events as baseless and inflammatory.**  
13 **Once the FCC made it clear that wireline carriers would be required to port num-**  
14 **bers to wireless carriers in areas outside the top 100 MSAs by May 24, 2004, ITC**  
15 **took immediate steps to investigate the cost and the processes involved with LNP**  
16 **and to explore its legal options. Because ITC had no experience with LNP, it took**  
17 **time to gather the pertinent information and to make the decision to seek a suspen-**  
18 **sion of the requirement from the Commission. Further, the suspension petition it-**  
19 **self took time and effort to prepare because ITC wanted to present as complete a pe-**  
20 **tition as possible, accompanied by cost information as complete as possible.**

21 Q. Do you agree with Mr. Williams' statement at page 14, lines 19-22, in which he states  
22 that "LECs will need to route a call to a ported number to the serving tandem" and to Mr.

1 Williams' statement at page 15, lines 1-4 when he discusses the routing of allegedly "lo-  
2 cal calls?"

3 **A. I believe that Mr. Williams' statement is not consistent with the interconnection**  
4 **agreement signed by ITC and Western Wireless. Pursuant to that agreement, ITC**  
5 **did not agree to route traffic destined for Western Wireless to the serving tandem.**  
6 **Rather, traffic terminating to Western Wireless is routed to Western Wireless via a**  
7 **direct connection for three of ITC's exchanges. In absence of an ITC customer sub-**  
8 **scribing to one of ITC's optional EAS plans, traffic terminating to Western Wireless**  
9 **in all other ITC exchanges is routed to an interexchange carrier. Only traffic**  
10 **routed to Western Wireless via a direct connection is routed as "local traffic." All**  
11 **other traffic to Western Wireless is routed to an interexchange carrier as a toll call.**  
12 **Therefore, it appears that Western Wireless' argument really is a bad faith attempt**  
13 **to change the agreement between the parties.**

14 **Q. At page 19, lines 8-10, Mr. Williams states that it is his belief that "the FCC views that it**  
15 **is the originating carrier's responsibility to deliver local traffic for termination and that**  
16 **the costs associated with fulfilling that responsibility are not a number portability cost."**  
17 **What is your response to this statement?**

18 **A. Mr. Williams' statements are inconsistent and should be rejected. First he argues**  
19 **that ITC should be required to install new facilities to deliver ported calls to West-**  
20 **ern Wireless and then he argues that the cost of those facilities are not number**  
21 **portability costs. Further, as discussed at lines 3-13 above, Mr. Williams' suggestion**  
22 **that it is ITC's responsibility to deliver traffic destined to Western Wireless through**

1 a serving tandem is not consistent with the interconnection agreement between ITC  
2 and Western Wireless.

3 Q. At page 20, lines 13-16, Mr. Williams states that “[t]he routing methods proposed by the  
4 Petitioners are inefficient in that they make little or no utilization of existing equipment  
5 and shared facilities currently used to exchange calls with other carriers.” How do you  
6 respond?

7 A. The routing methods reflected in the cost exhibit attached to ITC’s Petition are  
8 based on the current routing arrangements that ITC has in place with other carri-  
9 ers, namely, calls that are dialed on a local 7-digit basis are routed via direct connec-  
10 tions. For example, there is a direct connection between ITC and Western Wireless  
11 in the Clark exchange, and therefore, customers in that exchange can call a Western  
12 Wireless customer on a local 7-digit basis. Therefore, if calls to numbers ported to a  
13 carrier are to be dialed on a local 7-digit basis, a direct connection needs to be estab-  
14 lished between the carriers.

15 Q. Would Western Wireless’ routing proposal have impacts to ITC beyond LNP?

16 A. Yes. It is my understanding that Western Wireless’ proposal would increase ITC’s  
17 costs. First, Western Wireless’ proposal would require ITC to pay for new facilities  
18 to the tandem provider that it does not need for any purpose other than to route  
19 calls to ported numbers to wireless carriers. Second, ITC would most likely have to  
20 pay transit traffic charges to the tandem provider for transporting the traffic to the  
21 wireless carriers.

22 Q. Is there any other impact?

1 A. Yes. It appears that Western Wireless' proposal would create a regulatory arbi-  
2 trage scenario that could lead to the loss of access revenues. Today, certain calls to  
3 wireless carriers are routed to interexchange carriers. For example, if ITC Cus-  
4 tomer A calls a Western Wireless customer in an exchange where there is no direct  
5 connection and no EAS arrangement, ITC Customer A incurs a toll charge. How-  
6 ever, under Western Wireless' proposal, it is my understanding that if ITC Cus-  
7 tomer A calls a Western Wireless customer with a number ported from ITC, ITC  
8 Customer A would be charged for a local call. Customers may be encouraged to  
9 "give up" their existing wireless numbers and obtain wireline numbers for the sole  
10 purpose of porting that number to avoid toll charges. This is not only a bad public  
11 policy result, but also simply a bad faith attempt to avoid an important contract  
12 provision upon which Western has already agreed with our company.

13 Q. Does this conclude your rebuttal testimony?

14 A. Yes.

15

CERTIFICATE OF SERVICE

The undersigned hereby certifies that she served a copy of the foregoing **REBUTTAL TESTIMONY** upon the persons herein next designated, on the date below shown, by depositing a copy thereof in the United States mail at Pierre, South Dakota, postage prepaid, in an envelope addressed to each said addressee, to-wit:

Richard D. Coit  
Director of Industry Affairs  
South Dakota Telecommunications Association  
P. O. Box 57  
Pierre, South Dakota 57501

Talbot J. Wiczorek  
Gunderson, Palmer, Goodsell & Nelson, LLP  
P. O. Box 8045  
Rapid City, South Dakota 57709-8045

David A. Gerdes  
MAY, ADAM, GERDES & THOMPSON  
P. O. Box 160  
Pierre, South Dakota 57501

Dated this fourteenth day of June, 2004.

BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA

---

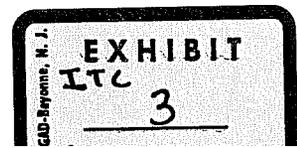

IN THE MATTER OF THE PETITION  
OF INTERSTATE TELECOMMUNICA-  
TIONS COOPERATIVE, INC. FOR  
SUSPENSION OR MODIFICATION OF  
§ 251(b)(2) OF THE COMMUNICA-  
TIONS ACT OF 1934 AS AMENDED

Docket No. TC04-054

---

**DIRECT PRE-FILED TESTIMONY OF**  
**JOHN DE WITTE**

**May 14, 2004**

1 Inc., a telecommunications equipment manufacturer in Raleigh, NC and Atlanta,  
2 GA. I am a regular speaker at many state, regional, and national telephone com-  
3 pany organization events, including the National Telephone Cooperative Associa-  
4 tion (NTCA) and the Organization for the Promotion and Advancement of Small  
5 Telecommunications Companies (OPASTCO). In this capacity, I often advise tele-  
6 phone company managers and board members regarding a variety of technical and  
7 financial issues.

8 **Q: On whose behalf are you testifying in this proceeding?**

9 A: My direct pre-filed testimony is submitted on behalf of Interstate Telecommunica-  
10 tions Cooperative, Inc. (ITC).

11 **Q: What is the purpose of your testimony?**

12 A: I will provide testimony on technical and cost issues of implementing intramodal  
13 LNP and intermodal LNP that is pertinent to this hearing.

14 **Q: Are you familiar with current telephone network technologies, including**  
15 **switching equipment, transmission equipment, and outside plant architec-**  
16 **tures?**

17 A: I have provided engineering and consulting services to more than 100 rural LECs  
18 across the United States. I am familiar with nearly all of the technologies and archi-  
19 tectures of a rural LEC network, including transport equipment, switching equip-  
20 ment, digital loop carrier equipment, broadband networks, along with copper and  
21 fiber outside plant cable. I have engineered both landline networks and wireless  
22 networks for my clients.

1 **Q: Do you understand the various methods and requirements that are required to**  
2 **support Intramodal (wireline to wireline or wireless to wireless) and Intermo-**  
3 **dal (wireline to wireless) Local Number Portability?**

4 A: Yes I do.

5 **Q: With the number of variants for LNP, which implementation of LNP is the fo-**  
6 **cus of your testimony?**

7 A: In general, the methodologies, rules, and implementation processes for wireline In-  
8 tramodal LNP are clearly defined.. The methodologies, rules, and implementation  
9 processes for Intermodal (wireline to wireless) LNP and wireless Intramodal LNP  
10 have only been in place since November 2003. Intermodal LNP relating to wireline  
11 to wireless ports will be the focus of my direct testimony. However, since the Peti-  
12 tioner has received a request for intramodal LNP from Midcontinent Communica-  
13 tions in the Webster exchange, these costs will be addressed as well.

14 **Q: What unique challenges are presented to a rural Independent Local Exchange**  
15 **Carrier (ILEC) with the implementation requirements of Intermodal LNP?**

16 A: There are several technical and economic issues facing rural ILECs as they evaluate  
17 the implementation of Intermodal LNP. These challenges for the small rural LECs  
18 concern the interconnection of wireless and wireline networks for the purposes of  
19 implementing Intermodal LNP. The Petitioner does not have existing direct points  
20 of connection to wireless carriers' networks in many of the rate centers it serves.  
21 Where there are no direct points of connection with the wireless carriers, only con-  
22 ventional, switched toll routes remain; but no translating, routing, rating or cost re-  
23 covery rules are in place. Some of the questions that need to be addressed include:  
24 (1) where and how should the Petitioner interconnect with the wireless carriers, (2)

1 is the point of interconnection within the LATA, and (3) how will the Petitioner be  
2 able to maintain the original rate center designation and rating when the number is  
3 ported to a point of interconnection that is located outside the original rate center,  
4 when the wireless service area and the Petitioner's service area vary greatly. These  
5 issues are unique in rural areas, such as the Petitioner's service area, where few, if  
6 any interconnection arrangements exist and there are fewer subscribers in compari-  
7 son to metropolitan areas over which to spread the costs of Intermodal LNP. The  
8 uncertainty surrounding these and other questions are likely to cause significant  
9 customer confusion, complaints to the Petitioner and the SDPUC, and the resulting  
10 perception of degraded customer service on the part of the Petitioner's members.  
11 Numerous upgrades in software and operational procedures will be required in or-  
12 der to meet the Intermodal LNP requirements, which will benefit only those few  
13 subscribers that choose to leave ITC, while encumbering the entire remaining sub-  
14 scribers with the burden of funding the porting benefit. In addition, current imple-  
15 mentation rules do not provide the necessary competitive playing field to allow  
16 wireless subscribers to port to ITC's wireline services.

17 **Q: Has ITC received any requests for Intramodal LNP (wireline to wireline) for a**  
18 **potential wireline competitor?**

19 **A:** Until recently, ITC had not received a LNP request from a wireline competitive lo-  
20 cal exchange carrier (CLEC). ITC has recently received Bona Fide Requests  
21 (BFRs) from Midcontinent Communications to offer competing LEC services in  
22 ITC's Webster and Waubay exchanges.

1 **Q: What are the anticipated costs of implementing Intermodal LNP?**

2 A: The anticipated costs of implementing Intermodal LNP can be categorized into four  
3 (4) basic areas: 1) Switching related costs, 2) Number Portability Administration  
4 Center (NPAC) related costs, 3) Administrative/Technical costs and 4) Transport  
5 Costs. The LNP Petition filed on behalf of ITC included an Exhibit detailing the  
6 estimated implementation costs for intermodal LNP. This Exhibit is attached as  
7 Exhibit [1b]. Each of the cost elements in these categories will be identified in the  
8 following paragraphs.

9 Switching Related Costs

10 The cost elements in this category include switching generic software upgrades,  
11 LNP software features, prerequisite software features to support the LNP features,  
12 any requisite switch hardware to support the operation of the LNP software, switch  
13 vendor installation costs, vendor software activation fees, and maintenance ex-  
14 penses attributable to LNP. As part of the cost estimates provided with the ITC  
15 Waiver Petition, the cost estimates for this category are detailed as follows:

16 LNP Hardware Requirements

17 ITC utilizes a Nortel Networks (Nortel) DMS-10 as its wireline switching platform.  
18 ITC has verified with Nortel that the existing DMS-10 configuration does not re-  
19 quire any hardware additions to support the activation of LNP software. Therefore,  
20 ITC did not claim any non-recurring or recurring cost estimates for LNP hardware  
21 as part of its estimated costs.

22 LNP Software Features

23 According to oral conversations with Nortel, the ITC DMS-10s currently have the  
24 generic software load that will support LNP. The LNP software features have not

1 been activated in ITC's DMS-10s. Based on LNP pricing estimates from Nortel  
2 Networks, the non-recurring cost estimate for the LNP Basic software feature for  
3 DMS-10 switches is \$4 per equipped line, which amounts to \$76,264 for ITC.  
4 Nortel does not charge a recurring Right-To-Use (RTU) fee for these features.  
5 Based on the information provided by Nortel, ITC claimed \$76,264 for LNP soft-  
6 ware features and did not claim any recurring cost estimates for LNP software as  
7 part of its estimated costs.

#### 8 Additional Software Features

9 ITC has verified with Nortel that the existing DMS-10 configuration does not re-  
10 quire any pre-requisite software additions to support the activation of LNP soft-  
11 ware. However, if Directory Number Pooling is implemented in South Dakota for  
12 LNP, additional software features will require activation. Therefore, ITC claimed  
13 \$4,000 in non-recurring costs for this feature as part of its estimated costs.

#### 14 Additional Vendor Fees

15 ITC participates in Nortel's annual software upgrade program (Nortel's SR-10 pro-  
16 gram). As a result, Nortel will activate the LNP software feature bits in ITC's  
17 DMS-10 switching systems at no charge. ITC plans to use RUS funding for the  
18 LNP software charges if they are ultimately required as a result of this hearing. The  
19 processing of the RUS paperwork for the LNP software features is estimated at  
20 \$5,000. Due to this activity, ITC claimed as a Non-Recurring Additional Software  
21 Fee an estimated \$5,000 charge required for feature activation.

#### 22 Initial LNP Translations

23 There are several activities that are required to initially set up and test the basic  
24 translations for LNP. The non-recurring initial translations cost estimates were

1 based on the anticipated fees to data-fill and test basic LNP functionality in the Peti-  
2 tioner's switching system. This testing includes coordination of testing with the  
3 SOA provider, coordination of testing with any transiting carriers, verification of  
4 proper LNP dip activities, verification of billing system interaction, and other trans-  
5 lations activities. This cost estimate is approximately \$27,000. In order to allow  
6 time for coordination of testing with other entities, it is assumed that the initial  
7 translations testing will require approximately one (1) man-week of translations ac-  
8 tivities by a 3<sup>rd</sup> party technical consultant for each of its six (6) host switches, at a  
9 loaded hourly rate of \$100 per hour. The remaining portion of this cost estimate in-  
10 cludes travel, living and other miscellaneous expenses.

#### 11 Technical Implementation and Testing

12 There are several activities that are required to initially set up and test the basic  
13 translations for each CMRS carrier requesting Intermodal LNP. The non-recurring  
14 technical implementation and testing cost estimates were based on the anticipated  
15 fees to data-fill and test specific Intermodal LNP functionality in the Petitioner's  
16 switching system. The non-recurring technical implementation and testing cost es-  
17 timates were based on performing number porting tests individually associated with  
18 each CMRS to ensure that the ported number route correctly flows through the Peti-  
19 tioner's network. As the FCC has not required a formal Interconnection Agree-  
20 ment, it is assumed that the Petitioner will be responsible for performing these tests  
21 in order to ensure proper call routing. The cost estimate is based on 24 hours of  
22 testing at \$100 per hour for each appropriate exchange by a 3rd party resource and  
23 includes travel and living expenses.

1        NPAC Related Costs

2        The cost elements in this category include Service Order Administration (SOA)  
3        costs, LNP Query costs, and connection costs with the LNP database. As part of  
4        the cost estimates provided with the ITC Waiver Petition, the cost estimates for this  
5        category are detailed as follows:

6        Service Order Administration

7        As part of the LNP implementation process, the Petitioner must select a provider to  
8        administer updates to the Number Portability Administration Center (NPAC) LNP  
9        database. In anticipation of reduced porting intervals in the future, the Petitioner  
10       has elected to include the costs for an automated SOA system. The SOA cost esti-  
11       mates were based on a compilation of SOA services price lists from several firms  
12       providing automated SOA services. These cost estimates represent the anticipated  
13       start-up costs and recurring costs levied by the SOA provider to utilize its auto-  
14       mated services to update the LNP databases. The sample pricing scenarios were  
15       obtained under Non Disclosure Agreement (NDA) from several SOA services pro-  
16       viders. As the Petitioner has not entered into any contracts with these or any SOA  
17       entities, firm pricing cannot be provided. As an estimate, the non-recurring SOA  
18       costs were assumed to be \$1,800 with the recurring SOA costs assumed to be  
19       \$2,100. Should the Petitioner enter into a contract with an automated SOA pro-  
20       vider, these cost estimates can be revised.

21       LNP Query Charges

22       With the implementation of LNP, the Petitioner will incur charges for each LNP  
23       query launched for its subscribers. The LNP query cost estimates were based on a  
24       compilation of SOA services price lists from several firms providing automated

1 SOA services. The sample pricing scenarios were obtained under NDA from sev-  
2 eral SOA Services providers. As the Petitioner has not entered into any contracts  
3 with these or any SOA entities, firm pricing cannot be provided. The non-recurring  
4 LNP Query cost estimate represents the anticipated start-up costs levied by the SOA  
5 provider to utilize its services to dip its database. This initial set-up charge is as-  
6 sumed to be \$500. The recurring LNP Query cost estimates were based on the as-  
7 sumption that each of the Petitioner's access lines would generate five (5) to six (6)  
8 call attempts per day; each of the call attempts would generate an LNP query. The  
9 query charge is assumed to range between \$0.001 and \$0.0005 per query. Based on  
10 these assumptions, the recurring LNP Query charge was assumed to be \$1,875.  
11 Should the Petitioner enter into a contract with an automated SOA provider, these  
12 cost estimates can be revised.

#### 13 Connection Costs w/LNP Database

14 With the implementation of LNP, the Petitioner will incur set-up charges levied by  
15 the SOA provider to enter its NECA Operating Company Number (OCN) and Point  
16 codes for each switch launching LNP queries to the SOA's LNP database. The  
17 non-recurring connection costs with LNP database estimate was based on a compi-  
18 lation of SOA services price lists from several firms providing automated SOA ser-  
19 vices. The sample pricing scenarios were obtained under NDA from several SOA  
20 Services providers. As the Petitioner has not entered into any contracts with these  
21 or any SOA entities, firm pricing cannot be provided. The cost estimate for this  
22 element was estimated at \$900 assuming a maximum of six (6) point codes at \$150  
23 per point code. Should the Petitioner enter into a contract with an automated SOA  
24 provider, this cost estimate can be revised.

1           Technical and Administrative Costs

2           The cost elements in this category include testing and verification of each ported  
3           DN, translations for each ported DN, administrative cost estimates, regulatory cost  
4           estimates, customer care cost estimates, and marketing cost estimates. As part of  
5           the cost estimates provided with the ITC Waiver Petition, the cost estimates for this  
6           category are detailed as follows:

7           Testing and Verification of Each Ported Dial Number

8           This cost estimate addresses the anticipated activities to test each “ported out” di-  
9           rectory number (DN) to verify the proper routing of the DN. The recurring Test-  
10          ing/Verification cost estimates were based on one hour per port at the Petitioner’s  
11          loaded technical labor costs of \$46 per hour.

12          Per Port Translations

13          This cost estimate addresses the anticipated translations activities to “port out” each  
14          DN. The recurring translations cost estimate was based on one hour per port at the  
15          Petitioner’s loaded technical labor costs of \$46 per hour.

16          Administrative Costs

17          The implementation of LNP will require ITC to implement new administrative poli-  
18          cies and procedures. The non-recurring administrative cost estimates were based on  
19          providing LNP process training for the Petitioner’s administrative personnel. The  
20          training is assumed to be provided by the entity providing automated SOA services.  
21          The Petitioner has not selected a SOA provider at this time. The non-recurring  
22          costs estimates are based on a one-week onsite customer service representative  
23          training class, including the instructor’s travel and living expenses. This cost is as-  
24          sumed to be \$5,000. The recurring administrative cost estimate addresses the an-

1 anticipated administrative activities required with entry of the ported number into the  
2 SOA system. The recurring administrative cost estimates were based on one hour  
3 per port at the Petitioner's loaded administrative labor costs of \$41 per hour.

#### 4 Regulatory Costs

5 This cost element is associated with the Petitioner's Legal Fees and Regulatory  
6 Consulting fees. The legal fees are associated with the Petitioner's attorneys. The  
7 anticipated fees are associated with reviewing the legal aspects of LNP filings and  
8 LNP implementation. The regulatory consulting fees are typically associated with  
9 the updates required to various National databases (NECA Tariff 4, Telcordia  
10 LERG, etc.) and the possible assistance with the completion of the NECA End User  
11 Charge worksheets. This cost is estimated at 100 hours at an average rate of \$150  
12 per hour and includes travel, living, and miscellaneous expenses. Based on the le-  
13 gal activities required to implement LNP, the Petitioner may revise this figure at a  
14 later date.

#### 15 Customer Care Costs

16 The implementation of LNP will require ITC to implement new customer care poli-  
17 cies and procedures. The non-recurring customer care cost estimates were based on  
18 providing LNP customer care training for the Petitioner's administrative personnel.  
19 The training is assumed to be provided by the entity providing the Petitioner's bill-  
20 ing platform services. The Petitioner has not developed the Customer Care and  
21 Billing processes for LNP at this time. The costs estimates are based on a one-week  
22 onsite Operational Support Services (OSS) training class. The recurring customer  
23 care cost estimates were based on one (1) hour per port at the Petitioner's loaded  
24 administrative labor costs of \$41 per hour. This cost estimate addresses the antici-

1 pated administrative activities required with updating the Petitioner’s customer care  
2 and billing system and to track the “ported out” DNs.

3 Marketing and Informational Flyer Cost Estimates

4 The implementation of LNP will likely generate subscriber confusion from the ad-  
5 dition of an End User Charge for the implementation of LNP. The Petitioner plans  
6 to develop an informational flyer to help educate the subscriber base by explaining  
7 LNP and the reasons for the proposed LNP End User Charge appearing on the sub-  
8 scribers’ monthly local service bill. The non-recurring marketing and informational  
9 flyer cost estimates were based on the costs required to develop an informational  
10 flyer and billing insert explaining LNP and any end-user fees that may apply. The  
11 total non-recurring estimated costs in this category were expressed as a “per access  
12 line” cost and were estimated at approximately \$2.00 per subscriber. This cost es-  
13 timate includes the development of the explanatory LNP text, the graphic design  
14 artwork, and first run printing costs. The recurring marketing and informational  
15 flyer cost estimates were based on approximately \$1.00 per subscriber per year for  
16 volume print costs, handling, and mailing the periodic flyer/bill insert. This recur-  
17 ring marketing/informational flyer cost estimate was amortized over 12 months to  
18 arrive at an estimated monthly fee for the Cost Exhibit.

19 Billing/Customer Care Software Updates

20 The Petitioner’s billing and customer care system will require software upgrades to  
21 support LNP. The non-recurring billing and customer care software upgrade cost  
22 estimates represents the anticipated costs to upgrade the Petitioner’s billing system  
23 to accommodate LNP functionality. This upgrade was estimated as an allocated  
24 cost of the Petitioner’s annual billing system upgrade.

1       Transport-Related Cost Estimates

2       The cost elements in this category include the estimated costs of transport to con-  
3       nect the Petitioner's exchange with the CMRS carriers, anticipated cost estimates  
4       for transiting CMRS connections, and anticipated cost estimates for pass-through  
5       N-1 Tandem LNP queries. As part of the cost estimates provided with the ITC  
6       Waiver Petition, the cost estimates for this category are detailed as follows:

7       Transport Cost Estimates

8       The Petitioner will require direct Type 2B DS1 transport facilities from the Peti-  
9       tioner's exchange to each CMRS provider's Point of Interconnection (POI) for  
10       those CMRS carriers requesting intermodal LNP. The Petitioner does not possess  
11       POI information for each CMRS carrier. The non-recurring wireless carriers POI  
12       cost estimates represent the costs associated with providing a Type 2B DS1 span to  
13       each CMRS provider. As stated in the Petition, the Petitioner assumes interconnec-  
14       tion will be required with six (6) CMRS carriers. The Petitioner estimates that the  
15       non-recurring transport costs for each CMRS will be approximately \$4,000 per ex-  
16       change. This cost estimate includes the switch DS1 interface hardware and support-  
17       ing equipment required to place a Type 2B DS1 span into service. The recurring  
18       wireless carriers POI cost estimates were based on monthly transport lease cost es-  
19       timates. As stated in the Petition, the Petitioner assumes interconnection will be re-  
20       quired with six (6) CMRS carriers. The cost estimate for the recurring transport  
21       costs for each Type 2B DS1 is approximately \$1,150 per month, based upon a ver-  
22       bal estimate obtained from SDN Communications. ITC plans to revise this recur-  
23       ring transport cost estimate once POI information is provided by the CMRS carriers

1 and firm pricing can be provided by a transport provider (such as SDN Communica-  
2 tions or Qwest).

3 Mobile Telephone Switching Office (MTSO) POI Connection Cost Estimates

4 The Petitioner does not possess POI information for the CMRS carriers that have or  
5 will likely provide a Bona Fide Request (BFR) to the Petitioner for intermodal  
6 LNP. The possibility exists that a transiting carrier (such as Qwest or SDN Com-  
7 munications) may establish Type 2B DS1 connections with one or more of the  
8 CMRS carriers. The MTSO POI connection cost estimates represent the anticipated  
9 costs for the Petitioner's share of this connection, if required. The non-recurring  
10 MTSO POI connection cost estimates were based on an estimate of the start-up  
11 costs to utilize a transiting carrier for CMRS MTSO connections, if required. The  
12 recurring MTSO POI connection cost estimates were based on the Petitioner's an-  
13 ticipated share of monthly lease for the transiting carrier MTSO POI connection  
14 cost estimates, if required. If the CMRS carriers elect to directly connect with the  
15 Petitioner (without a transiting carrier) on a direct Type 2B connection to the  
16 CMRS' Mobile Telephone Switching Office (MTSO), these cost estimates will  
17 likely be not applicable.

18 Transiting Non-Recurring Dip (Minimum) Cost Estimates

19 This cost estimate was based on the assumption that the transiting carrier may need  
20 to perform some LNP queries when the Petitioner's N-1 carrier fails to do so. The  
21 transiting non-recurring dip cost estimate describes the anticipated costs of the non-  
22 recurring set-up charges to enable the Petitioner to receive dip charges from a tran-  
23 siting carrier, such as SDN Communications. The initial setup charges are likely to  
24 be passed on to Petitioner. ITC has estimated this cost to be \$500. The transiting

1 carrier recurring dip cost estimates describe the anticipated costs of the minimum  
2 dip charges from a transiting carrier. These charges are likely to be passed on to  
3 Petitioner. ITC has estimated this cost estimate to be \$100 per month. If the  
4 CMRS carriers elect to directly connect with the Petitioner (without a transiting car-  
5 rier) on a direct Type 2B connection to the CMRS' Mobile Telephone Switching  
6 Office (MTSO), these cost estimates will likely be not applicable.

7 **Q: It appears that one of the larger estimated costs projected for the implementa-**  
8 **tion of Intermodal LNP relates to transport costs. What considerations con-**  
9 **cerning compensation for transport costs are applicable to the implementation**  
10 **of Intermodal LNP?**

11 A: With regard to the direct Type 2B connections to the wireless carriers described in  
12 the preceding cost estimates, these cost estimates are identified as required connec-  
13 tions to allow Intermodal LNP to function correctly within the Petitioner's existing  
14 billing and customer care systems.

15 **Q: If no direct Type 2B DS1 facilities are available for interconnection with the**  
16 **CMRS carriers, what happens for ITC?**

17 A: Without direct Type 2B facilities, the ported calls will be routed based on the Local  
18 Routing Number (LRN) delivered with the LNP query. The LRN will contain the  
19 NPA-NXX of the wireless carrier. Based on this NPA-NXX, these calls will be  
20 routed as toll calls over ITC's existing toll routes to ITC's Access Tandem (SDN  
21 Communications).

22 **Q: In your opinion, are the proposed Type 2B DS1 facilities to each CMRS carrier**  
23 **cost justified?**

1 A: Without actual traffic data, it is impossible to determine the feasibility of a particu-  
2 lar facility. However, based on the anticipated traffic levels generated by the pro-  
3 jected intermodal LNP ports, it appears that the construction of these facilities is not  
4 cost-justified. If the facilities were feasible, it is likely that the wireless carriers  
5 would have implemented them already as they have in other areas. Based on the  
6 projected traffic levels, it appears that the direct facilities between Petitioner and the  
7 wireless carriers required for LNP would be highly under-utilized and very ineffi-  
8 cient.

9 **Q: It appears that some of the anticipated cost estimates are based on the quantity**  
10 **of anticipated numbers that would be ported to a CMRS carrier. How was the**  
11 **number of ports determined?**

12 A: The quantity of projected ports is a function of the competitive environment in the  
13 proposed service area, the number of CMRS carriers, and other statistical data.  
14 The data that is currently available concerning porting activity for CMRS carriers  
15 on a wide-scale basis is limited. It is my understanding that no Petitioner cus-  
16 tomer has ever made an inquiry to Petitioner regarding LNP or a request for LNP.  
17 With respect to wireless LNP nationwide, to date, the demand for wireless porting  
18 has been far less than expected and most ports have been from one wireless car-  
19 rier to another. Wireline to wireless porting appears to be a small fraction of  
20 wireless porting in general.<sup>1</sup> According to NeuStar, 95% of wireless ports have  
21 been from one wireless carrier to another and only 5% of wireless ports were be-

---

<sup>1</sup> See "Survey Finds Little Impact From LNP", *RCR Wireless News*, February 9, 2004 ed., reporting that according to a consumer survey report from CFM Direct, very few telecommunications customers have switched their wireline phone numbers to wireless.

1           tween wireline and wireless carriers.<sup>2</sup> With lack of ubiquitous quality and incom-  
2           plete coverage of the Petitioner's existing service area by the existing wireless  
3           carriers, I believe that the percentage would be even smaller than in other more  
4           urban parts of the nation. For purposes of the cost exhibit, approximately two (2)  
5           intermodal ports per month were estimated,<sup>3</sup> which is well under the five (5) per-  
6           cent of the Petitioner's access lines. Accordingly, there appears to be little, if any,  
7           demand for LNP and, absent such demand, no public benefit will be derived from  
8           LNP. Even if some level of LNP demand develops in the future, the total imple-  
9           mentation costs that would be incurred by Petitioner to implement and maintain  
10          LNP would require re-evaluation based on the customer demand, quantity of  
11          ports, and the revised estimated costs for the required LNP infrastructure ele-  
12          ments.

13   **Q: Will any of the Petitioner's estimated costs change if the number of estimated**  
14   **ports is changed?**

15   A: Yes. There are several of the estimated recurring costs that are driven by the num-  
16   ber of ports. These cost elements include the recurring translations costs, the recur-  
17   ring testing and verification of each ported number, the recurring administrative  
18   cost estimates, and the recurring customer care costs. If the projected number of  
19   ports increases, these costs will increase. If the number of projected ports de-  
20   creases, these costs will decrease.

---

<sup>2</sup> See NARUC Notebook, *Communications Daily*, Vol. 24, No. 46, p. 4 (March 9, 2004)

<sup>3</sup> While actual industry figures are not available, most wireless carriers are currently experiencing a porting rate of between three percent (3%) and six percent (6%). Of these ports, it is estimated that between one percent (1%) and three percent (3%) are intermodal.

1 **Q: The current porting interval is currently four (4) days. If the porting interval**  
2 **were shortened to two (2) days or less, what effect, if any, would this shortened**  
3 **interval have on the estimated costs?**

4 A: The current industry experience with Intermodal porting is has not been without  
5 implementation issues. Significant problems meeting the current four (4) day port-  
6 ing interval have been reported. Assuming that the implementation issues are re-  
7 fined to the point where a shorter porting interval can be supported, the Petitioner  
8 has included the known cost elements to support a shorter porting interval. The Pe-  
9 titioner has assumed the use of an automated SOA system as part of their antici-  
10 pated LNP implementation costs. An automated SOA system will allow the Peti-  
11 tioner to accommodate an electronic request and acknowledgement for the ported  
12 numbers. Therefore, the Petitioner does not anticipate any increases in its SOA re-  
13 lated non-recurring or recurring cost estimates. It is possible that additional recur-  
14 ring costs in the areas of translations, technical implementation, testing, verifica-  
15 tion, customer care, and administrative would occur if the porting interval were to  
16 be reduced to require that porting activities occur outside of the standard business  
17 day (expedited requests, nights, weekends, and holidays). If porting is required dur-  
18 ing these times, additional loaded labor rates will be incurred. If the porting re-  
19 quirements are confined to the standard business day, the Petitioner does not antici-  
20 pate any additional recurring LNP costs. However, it is possible that unforeseen re-  
21 quirements could require additional charges.

22 **Q: Are there any other potential costs that could impact ITC with the implemen-**  
23 **tation of Intermodal LNP?**

1 A: If ITC must implement intermodal LNP, all carriers with EAS arrangements with  
2 ITC and their customers will be impacted because the other carrier will have to  
3 LNP dip all EAS calls. This would increase the cost of EAS between ITC and the  
4 other carrier and could result in a loss of EAS options to the customer or an increase  
5 in the cost of optional EAS service.

6 **Q: Some telecommunications industry analysts have suggested that Foreign Ex-**  
7 **change Service (FX) could be used to provide connections to accommodate in-**  
8 **termodal LNP. Is this a reasonable alternative?**

9 A: There have been industry discussions of using an FX service for Intermodal LNP  
10 interconnection. An FX service is a line appearance that is extended from the  
11 “home” exchange to a “foreign” exchange using dedicated point-to-point facilities.  
12 The FX service is engineered on a per line basis. It is not a common trunk that can  
13 be used by a carrier for routing purposes. With an FX service, the LEC has cus-  
14 tomers and facilities in one rate center and provides service to customers in another  
15 rate center using the same “home” number block. To do this, facilities are extended  
16 from the LEC rate center to the foreign rate center where the customer resides. It is  
17 important to note that the customer pays for the use of these facilities. The LEC is  
18 compensated for their facilities and lost toll revenue through these customer  
19 charges. It is unknown exactly how an ILEC would implement an FX service to  
20 accommodate Intermodal LNP. The exact connectivity, rate elements, and network  
21 configuration for the proposed Intermodal LNP FX service appear to be undefined.  
22 As such, any discussion of using FX as a viable transport alternative for Intermodal  
23 LNP transport is purely speculation.

1 **Q: You have addressed several estimated costs for Intermodal LNP. How would**  
2 **these cost estimates change if the Petitioner must implement only Intramodal**  
3 **(wireline to wireline) LNP?**

4 A: All cost elements would stay the same, but the amount of the cost estimates could  
5 change. It is my understanding that both wireline providers would be in the same  
6 rate center. Accordingly, the primary change in the estimated costs would be in the  
7 area of transport costs. The petitioner estimates that these transport costs would  
8 likely be significantly reduced. Intramodal LNP has clearly defined processes for  
9 the exchange of traffic between the respective wireline carriers competing in a  
10 clearly defined rate center. In the intramodal LNP cases with which I'm familiar,  
11 the carriers have entered into an Interconnection Agreement. The Intramodal Inter-  
12 connection Agreement addresses the methods and compensation that will be used to  
13 establish interconnection and exchange traffic between the wireline carriers. The  
14 compensation for the traffic volumes is typically in the form of reciprocal compen-  
15 sation. In addition, the recurring costs for testing of each ported number would  
16 likely be reduced since the dialing plans and routing between the carriers will likely  
17 not change on a regular basis. The reduction of these costs is dependent upon the  
18 volume of ports. The remaining costs will likely be unchanged. As an example, the  
19 anticipated costs to implement intramodal LNP in the Petitioner's Webster ex-  
20 change is attached as Exhibit [1a]. In this exhibit, the reduction in anticipated LNP  
21 implementation costs is primarily due to the removal of the transport costs.

22 **Q: What would be the timeframe required for the Petitioner to fully implement,**  
23 **test and place Intermodal LNP into commercial service, if required to do so?**

1 A: Please refer to the LNP Implementation Timeline, attached hereto as Exhibit [2].  
2 The Timeline details the individual, inter-dependent tasks necessary to fully imple-  
3 ment Intermodal LNP. They are arrayed in a self-explanatory fashion, showing the  
4 anticipated duration of each task and its relationship to other tasks. The overall du-  
5 ration that results for the Timeline supports that approximately six (6) months  
6 would be required to fully prepare for, implement, test and place Intermodal LNP  
7 into commercial service, as stated in the ITC Waiver Petition. As with any plan-  
8 ning horizon, this timeline does not take into account holidays or other unforeseen  
9 delays due to Force Majure.

10 **Q: Does this conclude your direct testimony?**

11 A: Yes. I also reserve the opportunity to revise or modify this pre-filed direct testi-  
12 mony at or before the hearing if I receive additional information pertaining to the  
13 issues I presented herein.

PRE-FILED REBUTTAL TESTIMONY OF  
JOHN DE WITTE

June 14, 2004

1 Q: What is your name?

2 A: My name is John M. De Witte.

3 Q: Are you the same John M. De Witte who filed direct pre-filed testimony in this  
4 proceeding?

5 A: Yes.

6 Q: What is the purpose of your rebuttal testimony?

7 A: To discuss some of the cost and technical issues Western Wireless Corporation  
8 (WWC) raised in the direct testimony of Mr. Ron Williams and to provide informa-  
9 tion regarding the impact of some of WWC's proposals.

10 Q: Have you read the pre-filed direct testimony of Mr. Williams filed on behalf of  
11 WWC in this proceeding?

12 A: Yes.

13 Q: Do you understand the technical issues that were raised in Mr. Williams' Di-  
14 rect Testimony?

15 A: Yes, as I describe in this rebuttal testimony. My staff and I have performed the  
16 technical engineering and economic analysis for many of the rural South Dakota  
17 ILECs over the past several years. We have been involved with the strategic plan-  
18 ning and implementation for many of the broadband networks that are serving rural  
19 South Dakota subscribers today. In every instance with which I am familiar, the  
20 ILECs have carefully invested their limited funds where technology deployments  
21 are feasible and serve the public interest. The South Dakota PUC can be proud of  
22 its role in the encouragement and deployment of those services. I would like to par-  
23 ticularly point out that through cooperative ventures undertaken by the rural ILECs,

1 many operating efficiencies have been realized. As we have demonstrated in our  
2 original petitions, the lack of demand and projected high implementation costs of  
3 LNP do not appear to serve the public interest for the deployment of the service.

4 Q: Mr. Williams believes that the LNP Implementation Costs are overstated in  
5 several categories. Can you provide additional detail to support your cost es-  
6 timates?

7 A: Mr. Williams takes issue with the LNP implementation cost estimates for several  
8 categories. Specifically, Mr. Williams raises issues with transport cost estimates,  
9 SOA cost estimates, LNP Testing/Verification/Administrative cost estimates, and  
10 LNP Marketing Flyer Cost Estimates. I will address each of these categories indi-  
11 vidually.

#### 12 Transport Cost Estimates

13 The transport cost estimates were derived by provisioning a DS1 to each of the Peti-  
14 tioner's rate centers for each wireless carrier. The basis for this methodology is  
15 simple. The Telecom Act of 1996 states that the Point of Interconnection (POI) for  
16 connecting carriers should be at "any technically feasible point *within the carrier's*  
17 *network.*"<sup>1</sup> CMRS carriers with a desire to exchange traffic directly with a wireline  
18 carrier typically order a Type 2B (End Office) or Type 2A (Access Tandem) DS1  
19 facility from the wireline carrier. The CMRS carriers have not universally de-  
20 ployed direct connections to the rural areas served by the Petitioner. In South Da-  
21 kota, the CMRS carriers have ordered (and paid for) very few Type 2B connections  
22 into rural ILEC service areas. Most of the South Dakota ILECs which whom I am  
23 familiar, do not have any existing Type 2B connections. Of the South Dakota

---

<sup>1</sup> 47 U.S.C. § 251 (c) (2) (emphasis added)

1 ILECs that do have direct Type 2B connections, it is typically a single connection  
2 to a single exchange. The CMRS carriers have not universally deployed Type 2B  
3 connections to all South Dakota ILEC territories and all ILEC exchanges.

4 The CMRS carriers issued BFRs to the Petitioner for LNP services with a  
5 listing of each of the Petitioner's exchanges by Common Language Location Identifier  
6 (CLLI) code. The BFR notifications did not include any provisions for agree-  
7 ments detailing interconnection, transiting, or reciprocal compensation. In addition,  
8 none of the CMRS providers provided any POI information with their BFRs to al-  
9 low the Petitioner to evaluate transport options or costs. In order to maintain the  
10 proper routing for the wireless calls and local rating for calls to wireless numbers,  
11 the Petitioner assumed that direct Type 2B connections would be deployed in each  
12 exchange for each CMRS carrier. If a CMRS carrier had ordered a Type 2B direct  
13 connection to an exchange, it was assumed that this existing facility would be util-  
14 ized to carry that CMRS' LNP traffic for that exchange. As none of the CMRS car-  
15 riers placed orders for Type 2B or Type 2A direct interconnection facilities with  
16 their BFRs, the Petitioner included these costs as part of their Implementation Cost  
17 estimates.

18 The routing methods reflected in the cost exhibits attached to my direct tes-  
19 timony are based on the current routing arrangements that the Petitioner has in  
20 place with other toll and EAS connecting carriers. In general, calls that route using  
21 10 digits are considered to be toll calls and calls that route using 7 digits are consid-  
22 ered to be local calls. Calls that use 7 digit dialing either terminate in the Peti-  
23 tioner's network or utilize a direct connection (referred to as an EAS trunk). There-

1 fore, if calls to numbers ported to a carrier are to be dialed on a local 7-digit basis  
2 (local call), a direct connection needs to be established between the carriers, hence  
3 the requirement for direct Type 2B connections with the CMRS carrier. This con-  
4 nectivity is depicted in Rebuttal Testimony Exhibit 1. The Petitioner assumed that  
5 each CMRS provider would require separate facilities since there are no known  
6 Agreements in place that allow the CMRS carriers to share a common connection  
7 with the Petitioner's network. The anticipated cost of the transport facilities from  
8 the Petitioner's exchanges to Sioux Falls, SD was provided by SDN Communica-  
9 tions and attached as Rebuttal Exhibit 2.

10 WWC has agreed to the routing methodology described above, which re-  
11 quires a dedicated Type 2B connection to each end office, in the Reciprocal Com-  
12 pensation Agreement negotiated as part of WWC's arbitration proceeding in South  
13 Dakota. Paragraph 3.1.3 of the Agreement states: "Type 2B Interconnection: Fa-  
14 cilities which provide a trunk side connection between the CMRS Provider and the  
15 Telephone Company end office. The CMRS Provider's POI must be located within  
16 the Telephone Company's end office exchange boundary of that Telephone Com-  
17 pany end office." Since none of the CMRS carriers have ordered Type 2B connec-  
18 tions to every end office, the cost estimates for these transport facilities were in-  
19 cluded in the Petitioner's cost exhibits. As a result, the revised cost exhibit pro-  
20 vided by Mr. Williams in his direct testimony<sup>2</sup> does not accurately depict the trans-  
21 port costs that would be incurred due to the implementation of LNP. The updated  
22 transport figures from Rebuttal Exhibit 1 have been incorporated into the Peti-  
23 tioner's revised cost estimates attached as Rebuttal Exhibit 3.

---

<sup>2</sup> Testimony of Ron Williams on behalf of Western Wireless, Exhibit 5B – Transport Related Costs

1 While there may be more efficient network trunking configurations that  
2 could be implemented as Mr. Williams asserts in his direct testimony, there are no  
3 Interconnection Agreements or Reciprocal Compensation Agreements in place for  
4 alternative arrangements and the Petitioners cannot require other carriers to agree to  
5 other arrangements. One way to address the impasse over transport costs may be to  
6 allow the Petitioners to investigate alternative transport options and then offer those  
7 alternatives to carriers that wish to port numbers. Carriers like WWC could then ei-  
8 ther negotiate direct connections through the interconnection process, chose to use  
9 the alternative transport option, or chose not to port with a particular Petitioner.  
10 This would seem to be a fairer alternative than simply placing the entire burden of  
11 transport on Petitioners and their end user customers.

#### 12 Service Order Administration (SOA) Cost Estimates

13 As detailed in our response to WWC's Discovery Requests, the SOA cost estimates  
14 were derived by evaluating planning pricing from several vendors that offer auto-  
15 mated SOA provisioning services. The actual pricing provided by these providers  
16 was obtained under a NDA with the providers. We have asked for permission to re-  
17 lease the data for this proceeding, but to date, the SOA providers have not released  
18 Vantage Point Solutions from the obligations of the NDA to provide actual pricing.  
19 While the actual pricing for each provider is confidential information, the cost esti-  
20 mates can be expressed by looking at the range of pricing for the automated SOA  
21 providers. From the pricing that we have received from these providers, the non-  
22 recurring setup fees range from \$1,800 to \$2,000 with monthly recurring fees rang-  
23 ing from \$500 to \$1,200. The LNP Query charge ranges from monthly recurring

1 minimums of \$100 to \$150 with query charges ranging from \$0.0005 to \$0.00075  
2 per query. In his testimony, Mr. Williams asserts that these costs are overstated  
3 since lower cost alternatives are available based on the number of projected ports.<sup>3</sup>  
4 However, in response to interrogatory 10.b., WWC does not contend that the cost  
5 amounts for an automated SOA interface are unreasonable. (See WWC Response  
6 to Interrogatory 10.b. attached to the Rebuttal Testimony of Steven E. Watkins).  
7 Therefore, if an automated process is not rejected, the cost estimates in the Petition-  
8 ers' cost exhibits should be allowed. The Petitioner agrees that lower cost SOA al-  
9 ternatives are available; however, the factor for generating the SOA cost estimates  
10 was not the quantity of ports, but the porting interval. These manual SOA proc-  
11 esses will not be sufficient if the CMRS carriers are successful in their ongoing ef-  
12 forts to reduce the porting interval from its current duration of four (4) days to the  
13 FCC target of 2.5 hours. Assuming that the CMRS carriers are successful in their  
14 endeavors to reduce the porting interval, the Petitioner assumed the use of an auto-  
15 mated SOA system for the five (5) year costs estimates that will be used to generate  
16 the anticipated NECA End User charge. If the Petitioners are not required to com-  
17 ply with a reduced porting interval, the Petitioners may be able to reduce their SOA  
18 cost estimates by planning to implement a manual, low-tech SOA interface. As a  
19 result, the revised cost exhibit provided by Mr. Williams in his direct testimony<sup>4</sup>  
20 (which uses "low tech" interfaces) does not accurately depict the anticipated SOA  
21 costs that would be incurred due to the implementation of LNP.

22 LNP Testing/Verification/Administrative Cost Estimates

---

<sup>3</sup> Testimony of Ron Williams on behalf of Western Wireless, pg 17, lines 9-10

<sup>4</sup> Testimony of Ron Williams on behalf of Western Wireless, Exhibit 5B – NPAC Related Costs

1 In his testimony, Mr. Williams incorrectly asserts that the LNP Testing, Verifica-  
2 tion, and Administration cost estimates “appear to be overstated and redundant”.<sup>5</sup>  
3 As stated in our response to WWC’s First Set of Discovery Questions 4(a)(iii) and  
4 5(a)(xiii), the Petitioner will be required to perform testing and verification on a re-  
5 curring and non-recurring basis to ensure that the ported calls are routing properly.  
6 This activity differs from the initial switching translations setup and testing that will  
7 be required after the appropriate software features are activated. As stated in my di-  
8 rect testimony, the non-recurring initial translations cost estimates were based on  
9 the anticipated fees to data-fill and test basic LNP functionality in the Petitioner’s  
10 switching system. This testing includes coordination of testing with the SOA pro-  
11 vider, verification of proper LNP dip activities, verification of billing system inter-  
12 action, and other translations activities.

13 With the initial software translations in place, additional testing, verifica-  
14 tion, and administration activities will be required for each carrier requesting LNP.  
15 The non-recurring technical implementation and testing cost estimates were based  
16 on the anticipated fees to data-fill and test specific LNP functionality in the Peti-  
17 tioner’s switching system. The Petitioner would seek to ensure that all calls route  
18 appropriately for each carrier that has ported one of the Petitioner’s numbers. No  
19 carrier has provided a mechanism for alerting the Petitioners to updates and changes  
20 to their dialing plan. As a result, each Petitioner must research the common indus-  
21 try databases and other sources to ensure that the traffic destined for carriers is  
22 routed properly. These anticipated costs are identified as the non-recurring testing  
23 and implementation costs on each Petitioner’s cost exhibit. Once the routing in-

---

<sup>5</sup> Testimony of Ron Williams on behalf of Western Wireless, pg 18, lines 2-3

1 formation is tested and verified for each carrier, the Petitioner plans to perform tests  
2 for each ported number as the port is requested to ensure that the ported number  
3 route correctly flows through the Petitioner's network. As a result, the revised cost  
4 exhibit provided by Mr. Williams in his direct testimony<sup>6</sup> does not accurately depict  
5 the recurring testing, verification, and administrative costs that would be incurred  
6 due to the implementation of LNP.

7 Marketing/Informational Flyer Cost Estimates

8 In his testimony, Mr. Williams incorrectly asserts that the Marketing/Informational  
9 Flyer Costs "are not justified on a recurring basis".<sup>7</sup> As stated in our response to  
10 WWC's First Set of Discovery Question 13(d), the Petitioner does not plan to pro-  
11 vide recurring monthly information to customers regarding LNP. The Petitioner  
12 plans to develop a marketing program and provide an explanation of LNP end user  
13 fees to their subscribers on an appropriate periodic basis. The revised cost exhibits  
14 (reference De Witte Rebuttal Exhibit 3) assume a single mailing. In order to arrive  
15 at a monthly estimated cost for the Petitioner's Cost Exhibit, the annual cost esti-  
16 mate for the periodic flyer was divided by twelve (12) to show an average monthly  
17 amount.

18 This type of marketing is required to address customer questions concerning  
19 new LNP End User Charges as well as to educate customers about LNP. As a re-  
20 sult, the Petitioner will incur an expense to provide an informational flyer. This  
21 cost estimate is supported by an advertising and marketing firm. When contacted,  
22 this firm estimated that the cost of the development of a marketing program was

---

<sup>6</sup> Testimony of Ron Williams on behalf of Western Wireless, Exhibit 5B – Technical/Administrative Costs

<sup>7</sup> Testimony of Ron Williams on behalf of Western Wireless, pg 18, lines 3-4

1 typically in the range of \$5,000 to \$10,000 depending upon the requirements for  
2 color scheme, concept, copyright, art direction (minimal photography), and final  
3 production. The costs would increase if additional artwork is required. For printing  
4 costs, single page 8"x10" glossy brochures typically run approximately \$800 per  
5 1,000 pieces and color postcards typically run approximately \$800 per 1,000 pieces.  
6 These estimates do not include any radio or television voice work, direction, or  
7 production. In addition, these estimates do not include any setup for newsprint me-  
8 dia. If other marketing services (voice services, brochures, etc.) are required, addi-  
9 tional expenses would likely apply. These revisions have been incorporated into  
10 and are supported by the attached marketing company estimate, which is attached  
11 as Rebuttal Exhibit 4.

12 **Q: Do you have any other comments about Mr. William's testimony with respect**  
13 **to SOA costs and transport costs?**

14 **A:** Yes. Mr. Williams' revised cost estimates are based on the Petitioner's projection  
15 that there will be a low volume of ports. WWC, however, in response to interroga-  
16 tory 13.f. estimates a far greater number of ports per year and over a five year pe-  
17 riod. (See WWC Response to Interrogatory 13.f. attached to the Rebuttal Testi-  
18 mony of Steven E. Watkins). If you assume that other wireless carriers will have a  
19 similar number of ports, the total number of ports per year could be greater than  
20 what I have estimated in my testimony. My SOA and transport cost estimates are  
21 sensitive to the number of ported customers for each Petitioner. Therefore, to the  
22 extent that the number of ports is closer to WWC's testimony than mine, my cost  
23 estimates could increase significantly. Further, under WWC's assumptions and

1 formulas, the cost of LNP will be greater than that reflected in Mr. Williams' cost  
2 exhibit.

3 Q: How does the number of ported customers impact any end user charge for  
4 LNP?

5 A: If WWC's estimate of the number of ports is correct, there will be far fewer Peti-  
6 tioner subscribers and, therefore, the per subscriber cost of LNP will be much  
7 greater than the per subscriber cost projected by WWC.

8 Q: Is there a way to try to better estimate how many ports may occur and, there-  
9 fore, more accurately determine the per subscriber cost of LNP?

10 A: Yes. A review of the actual number of wireline to wireless ports in other rural areas  
11 over some period of time may provide a better indication of how many of Peti-  
12 tioner's customers may chose to port their numbers to wireless carriers.

13 Q: There are several South Dakota ILECs that have Type 1 line side connections  
14 to CMRS carriers. How are these connections affected by LNP requirements?

15 A: For clarification, Type 1 line side numbers reside in an end office of a LEC and are  
16 assigned to a Type 1 interconnection group, which connects the wireless carrier's  
17 switch and the LEC's end office switch. Type 2 directory numbers reside in a wire-  
18 less carrier's switch and are assigned to a Type 2 interconnection group, which  
19 connects the wireless carrier's switch and a LEC access tandem switch (Type 2A)  
20 or end office switch (Type 2B). In the November 10, 2003 *Order*, the FCC ac-  
21 knowledged the inherent difficulties and complexities that would be involved with  
22 mandating LNP with Type 1 connections. The FCC found that no action was nec-  
23 essary regarding the porting of numbers served by Type 1 interconnection because

1 carriers are migrating these numbers to switches served by Type 2 interconnection  
2 or are otherwise developing alternative solutions.<sup>8</sup> In his direct testimony, Mr. Wil-  
3 liams incorrectly asserts that wireless to wireless portability will be hampered in  
4 South Dakota due to these Type 1 connections<sup>9</sup>. However, in response to interroga-  
5 tory 19, WWC admits that it is not required to use numbers assigned by LECs and  
6 that it can obtain its own numbers. (See WWC Response to Interrogatory 19 at-  
7 tached to the Rebuttal Testimony of Steven E. Watkins).

8 **Q: In his Direct Testimony, Mr. Williams asserts that the risk for implementing**  
9 **LNP immediately is low.<sup>10</sup> What do you see as the risks for immediate imple-**  
10 **mentation of LNP?**

11 **A:** It appears that Mr. Williams is looking at the risk for implementing LNP from  
12 WWC's viewpoint, not the viewpoint of the Petitioner or its customer that will pay  
13 for the LNP implementation through End User charges. WWC's risk for immediate  
14 implementation of LNP is a very low risk because WWC appears to have the opin-  
15 ion that they should not have to compensate the Petitioner for transport, transiting,  
16 or any other LNP related costs. WWC expects the Petitioner or its customers to pay  
17 for all of these costs. At the same time, they are arguing that the LNP transport  
18 costs are minimal, even if direct connections do not exist. Based on the Discovery  
19 Responses provided by WWC, their solution appears to rely on the use of Qwest as  
20 a traffic aggregator for the LNP-related traffic and the conversion of the Petitioner's  
21 existing connections with Qwest from one-way toll trunks to 2-way toll trunks. The  
22 Petitioners currently do not use Qwest as a traffic aggregator and, as admitted by

---

<sup>8</sup> FCC CC Docket 95-116 dated November 10, 2003 §19

<sup>9</sup> Testimony of Ron Williams on behalf of Western Wireless, pg 22, lines 20-21

<sup>10</sup> Testimony of Ron Williams on behalf of Western Wireless, pg 21, lines 19-20

1 WWC, there is no requirement that they do so. Further, the use of Qwest as an ag-  
2 gregator has not been acceptable to the Petitioners for a number of reasons such as  
3 the ongoing disagreements with Qwest on the issue of "Phantom Traffic" on the  
4 Qwest terminating facilities and other service issues. The use of these Qwest facili-  
5 ties for LNP traffic could exacerbate the "Phantom Traffic" and other ongoing ser-  
6 vice issues with Qwest. In addition, transit traffic rates and terms and conditions  
7 are not governed by the interconnection rules and regulations. As a result, there is  
8 no basis to accept the transport scenario reflected in WWC's cost exhibit as a valid  
9 reflection of transport costs.

10 **Q: Does this conclude your rebuttal testimony?**

11 **A:** Yes. I reserve the opportunity to revise or modify this pre-filed rebuttal testimony  
12 at or before the hearing if I receive additional information pertaining to the issues I  
13 presented herein.

CERTIFICATE OF SERVICE

The undersigned hereby certifies that she served a copy of the foregoing **REBUTTAL TESTIMONY** upon the persons herein next designated, on the date below shown, by depositing a copy thereof in the United States mail at Pierre, South Dakota, postage prepaid, in an envelope addressed to each said addressee, to-wit:

Richard D. Coit

DeWITTE REBUTTAL EXHIBIT 4

**John De Witte**

---

**From:** Tom Helland [tom.helland@l-s.com]  
**Sent:** Wednesday, June 02, 2004 9:51 AM  
**To:** John De Witte  
**Subject:** Re: Marketing Program Development Costs

John,

Yes, those "ballpark" figures are accurate. Some of the variables would include: the amount of copywriting, photography needs, and how extensive revisions to the original work would be. I hope this is helpful.

Thanks,  
Tom Helland

John De Witte wrote:

Hi Tom,

It was great to speak with you this afternoon. I wanted to verify the numbers that we discussed this afternoon concerning the development of a marketing program that a rural Independent Local Exchange Carrier (ILEC) would utilize to explain the end user fees for Local Number Portability (LNP). While I understand that L-S has no position (for or against) this issue, if a marketing campaign were to be developed to explain any similar issue, the costs to develop a marketing campaign would likely be similar. I was wondering if you could verify that these estimated costs are in the ballpark for the development of a marketing campaign:

Development of the marketing program, including color scheme, concept, copyright, art direction (minimal photography), and final production  
Range: \$5,000 - \$10,000 depending upon art requirements

Printing Costs

8x11 Color Glossy – approximately \$800/1000 pieces

Color Postcard – approximately \$800/1000 pieces

There may be applicable discounts for higher volumes of printed media.

These estimates do not include any radio or television voice work, direction, or production. In addition, these estimates do not include any setup for newsprint media. If other marketing services (voice services, brochures, etc.) are required, additional expenses would likely apply.

Please verify that these Marketing Program Development costs are reasonable. Thanks.

**SUPPLEMENTARY REBUTTAL TESTIMONY OF  
JOHN DE WITTE**

1 **I. INTRODUCTION**

2 **Q: What is your name?**

3 A: My name is John M. De Witte.

4 **Q: Are you the same John M. De Witte that filed direct pre-filed testimony and**  
5 **pre-filed rebuttal testimony in this proceeding?**

6 A: Yes.

7 **Q: What is the purpose of your supplementary rebuttal testimony?**

8 A: To revise some of the cost figures appearing in my rebuttal testimony specifically  
9 relating to Exhibit 3A, Exhibit 3B, and Exhibit 3C. These revisions are due to  
10 clerical errors and errors in the Exhibit's spreadsheet formulas.

11 **Q: What are the corrections?**

12 A: The corrections were made to all three (3) Exhibits (3A, 3B, and 3C) as filed with  
13 my Rebuttal Testimony. The revisions are highlighted on the Exhibits and are  
14 detailed as follows:

15 Swiftel Communications

16 Swiftel Communications currently has one (1) existing Type 2B DS1 connection  
17 between the wireline DMS-100 and Sprint PCS (a CMRS carrier). The original  
18 transport estimates were calculated based on four (4) CMRS carriers. The original  
19 non-recurring and recurring cost estimates for the rebuttal exhibits were calculated  
20 as follows:

21 Non-Recurring Transport POI Estimate

1 (4 CMRS Carriers)\*(\$5,000 per Type 2B DS1) = \$20,000 non-recurring Transport  
2 POI Estimate. This estimate has been revised to reflect the reduction in costs due to  
3 this existing connection. The revised cost estimate is (3 CMRS Carriers)\*(\$5,000  
4 per Type 2B DS1) = \$15,000 non-recurring Transport POI Estimate.

5 Recurring Transport POI Estimate

6 (4 CMRS Carriers)\*(\$798.15 per month per Type 2B DS1) = \$3,193 recurring  
7 Transport POI Estimate. The formula contained a typographical error for the  
8 recurring estimate per Type 2B DS1. This estimate should have been (3 CMRS  
9 Carriers)\*(\$798.15 per month per Type 2B DS1, which was estimated as \$800 per  
10 month in my direct and rebuttal testimony), plus \$400 per month for the Type 2B  
11 DS1 connection to Sprint PCS at Brookings, = \$2,800 per month, as reflected in the  
12 direct and rebuttal testimony. This estimate has been revised to reflect the  
13 reduction in costs due to the existing connection to Sprint PCS. The revised cost  
14 estimate is (3 CMRS Carriers)\*(\$798.15 per month per Type 2B DS1) = \$2,394 per  
15 month recurring Transport POI Estimate. The Exhibits have been updated to reflect  
16 these revisions.

17 Interstate Telecommunications Cooperative

18 The non-recurring Administrative cost estimate reflected \$8,000 in the original cost  
19 exhibits filed with the direct and rebuttal testimony. This is a typographical error  
20 and should be estimated as \$5,000 as indicated in the text filed with my direct  
21 testimony. In addition, ITC currently has four (4) existing Type 2B DS1  
22 connections. Three (3) of these connections are with Western Wireless (Brookings.

1 Clark, and Webster) and one (1) of these connections is with Verizon Wireless  
2 (Brookings). The original transport estimates were calculated based on six (6)  
3 CMRS carriers. The original non-recurring and recurring cost estimates for the  
4 rebuttal Exhibits were calculated as follows:

5 Non-Recurring Transport POI Estimate  
6  $(6 \text{ CMRS Carriers}) * (24 \text{ Exchanges}) * (\$5,000 \text{ per Type 2B DS1}) = \$720,000$  Non-  
7 Recurring Transport POI Estimate. The formula contained a typographical error for  
8 the non-recurring estimate per Type 2B DS1. This estimate should have been  
9 \$4,000. Using this corrected estimate, the Exhibit should have reflected  $(6 \text{ CMRS}$   
10  $\text{Carriers}) * (24 \text{ Exchanges}) * (\$4,000 \text{ per Type 2B DS1}) = \$576,000$  Non-Recurring  
11 Transport POI Estimate. This non-recurring Transport POI estimate has been  
12 revised to reflect the reduction in costs due to the existing Type 2B connections.  
13 The revised cost estimate is  $[(6 \text{ CMRS Carriers}) * (24 \text{ Exchanges}) * (\$4,000 \text{ per Type}$   
14  $2\text{B DS1}) - (4 \text{ existing Type 2B connections}) * (\$4,000 \text{ per Type 2B DS1})] = \$560,000$   
15 Recurring Transport POI Estimate.

16  $(6 \text{ CMRS Carriers}) * (24 \text{ Exchanges}) * (\$1,093.35 \text{ per month per Type 2B DS1}) =$   
17  $\$157,442$  Recurring Transport POI Estimate. This estimate has been revised to  
18 reflect the reduction in costs due to the existing connections. The revised cost  
19 estimate is  $[(6 \text{ CMRS Carriers}) * (24 \text{ Exchanges}) * (\$1,093.35 \text{ per month per Type 2B}$   
20  $\text{DS1}) - (4 \text{ existing Type 2B connections}) * (\$1,093.35 \text{ per month per Type 2B DS1})] =$   
21  $\$153.069$  per month Recurring Transport POI Estimate. The Exhibits have been  
22 updated to reflect these revisions.

1        James Valley Telecommunications

2        Non-Recurring Transport POI Estimate

3        (5 CMRS Carriers)\*(13 Exchanges)\*(\$5,000 per Type 2B DS1) = \$325,000 Non-  
4        Recurring Transport POI Estimate. The formula contained a typographical error for  
5        the non-recurring estimate per Type 2B DS1. This estimate should have been  
6        \$4,000 as indicated in the text filed with my direct testimony. Using this corrected  
7        estimate, the Exhibit should have reflected (5 CMRS Carriers)\*(13  
8        Exchanges)\*(\$4,000 per Type 2B DS1) = \$260,000 Non-Recurring Transport POI  
9        Estimate.

10       Venture Communications Cooperative

11       The non-recurring LNP Software cost estimate reflected \$68,700 in the original cost  
12       exhibits filed with the direct and rebuttal testimony. This figure is based on Nortel  
13       Network's software program price of \$4.00 per equipped line as a software Right-  
14       To-Use (RTU) fee for DMS-10 networks. The cost estimate was based on 17,175  
15       equipped lines. The Sisseton DMS-10 currently has the LNP feature bit activated,  
16       therefore no additional software licensing is required for this office. The Sisseton  
17       exchange has 3,200 equipped lines. If these lines are omitted from the calculation,  
18       the revised quantity of equipped lines is 13,975. The revised cost estimate for the  
19       LNP Software features is calculated as (13,975 equipped lines)\*(\$4 per equipped  
20       line) = \$55,900. In addition, Venture currently has one (1) existing Type 2B DS1  
21       connection with Western Wireless (Sisseton). The original transport estimates were

1 calculated based on five (5) CMRS carriers. The original non-recurring and  
2 recurring cost estimates for the rebuttal Exhibits were calculated as follows:

3 Non-Recurring Transport POI Estimate

4  $(5 \text{ CMRS Carriers}) * (25 \text{ Exchanges}) * (\$5,000 \text{ per Type 2B DS1}) = \$625,000$  Non-

5 Recurring Transport POI Estimate. The formula contained a typographical error for

6 the non-recurring estimate per Type 2B DS1. This estimate should have been

7 \$4,000, as indicated in the text filed with my direct testimony. The Exhibit filed

8 with my direct testimony also contained a typographical error and displayed the

9 amount as \$530,250. Using this corrected estimate, the Exhibits should have

10 reflected  $(5 \text{ CMRS Carriers}) * (25 \text{ Exchanges}) * (\$4,000 \text{ per Type 2B DS1}) =$

11  $\$500,000$  Non-Recurring Transport POI Estimate. This non-recurring Transport

12 POI estimate has been revised to reflect the reduction in costs due to the existing

13 Type 2B connections. The revised cost estimate is  $[(5 \text{ CMRS Carriers}) * (25$

14  $\text{Exchanges}) * (\$4,000 \text{ per Type 2B DS1}) - (1 \text{ existing Type 2B connections}) * (\$4,000$

15  $\text{per Type 2B DS1}] = \$496,000$  Recurring Transport POI Estimate.

16  $(5 \text{ CMRS Carriers}) * (25 \text{ Exchanges}) * (\$1,762.47 \text{ per month per Type 2B DS1}) =$

17  $\$220,309$  Recurring Transport POI Estimate. This estimate has been revised to

18 reflect the reduction in costs due to the existing connections. The revised cost

19 estimate is  $[(5 \text{ CMRS Carriers}) * (25 \text{ Exchanges}) * (\$1,762.47 \text{ per month per Type 2B}$

20  $\text{DS1}) - (1 \text{ existing Type 2B connections}) * (\$1,762.47 \text{ per month per Type 2B DS1})] =$

21  $\$218,546$  per month Recurring Transport POI Estimate. The Exhibits have been

22 updated to reflect these revisions.

1 **Q: Does this conclude your supplemental rebuttal testimony?**

2 A: Yes. I reserve the opportunity to revise or modify this pre-filed supplemental  
3 rebuttal testimony at or before the hearing if I receive additional information  
4 pertaining to the issues I presented herein.

IN THE MATTER OF THE PETITION  
OF INTERSTATE TELECOMMUNI-  
CATIONS COOPERATIVE, INC. FOR  
SUSPENSION OR MODIFICATION OF  
§ 251(b)(2) OF THE COMMUNICA-  
TIONS ACT OF 1934 AS AMENDED

Docket No. \_\_\_\_\_

**PETITION**

---

**I. INTRODUCTION**

Pursuant to Section 251(f)(2) of the Communications Act of 1934, as amended (the Act), and South Dakota Codified Laws SDCL § 49-31-80, Interstate Telecommunications Cooperative, Inc. (ITC or Petitioner) hereby respectfully requests that the Public Utilities Commission of the State of South Dakota (Commission) grant a suspension or modification of Section 251(b)(2) of the Act. ITC also requests an immediate suspension of Section 251(b)(2) pending this Commission's consideration of the suspension request until six (6) months following the Commission's decision.

Section 251(b)(2) states that all local exchange carriers (LECs) have "[t]he duty to provide, to the extent technically feasible, number portability in accordance with requirements prescribed by the Commission."<sup>1</sup> The Federal Communications Commission (FCC) established rules to implement local number portability (LNP) by wireline carriers.<sup>2</sup> Pursuant to those rules, portability between wireline carriers was limited to the LEC rate center. In a Memorandum Opinion and Order and Further Notice of Proposed Rule-

---

<sup>1</sup> 47 U.S.C. §251(b)(2).

making released on November 10, 2003,<sup>3</sup> the FCC clarified the LECs' obligations to provide LNP to wireless carriers and found that LECs must implement LNP to allow porting to wireless carriers even when the wireless carrier does not have a point of interconnection or telephone numbers in the LEC's affected rate center. The FCC did not require porting from a wireless carrier to a wireline carrier, however, when there is a "mismatch" in rate centers. Rather, the FCC instituted a rulemaking to examine how such porting can be accomplished.

Petitioner requests the Commission grant a suspension of the Petitioner's individual obligations to provide "number portability," as that term is defined by applicable law.<sup>4</sup> As demonstrated herein, the statutory criteria for suspension are met. A grant of this Petition will permit the Commission to ensure that the public interest, convenience and necessity are not undermined in the provision of number portability. Further, grant of the Petition will allow clarification or resolution of the significant issues raised by intermodal portability<sup>5</sup> before LECs are forced to expend considerable resources in an attempt to adhere to vague portability rules<sup>6</sup>.

---

<sup>3</sup> Telephone Number Portability, *Memorandum Opinion and Order and Further Notice of Proposed Rule-making*, CC Docket No. 95-116, FCC 03-284 (rel. November 10, 2003) (*Order* or FNPRM).

<sup>4</sup> The Communications Act of 1934, as amended (the "Act") defines number portability as "the ability of users of telecommunication services to retain, *at the same location*, existing telecommunications numbers without impairment of quality, reliability, or convenience when switching from one telecommunications carrier to another." 47 U.S.C. §153 (30) (emphasis added). See also 47 C.F.R. § 52.21(p) (defining "service provider portability" identically to "number portability").

<sup>5</sup> The Petitioner utilizes the terms "wireline-to-wireless portability" and "intermodal portability" synonymously.

<sup>6</sup> The Petitioner is a cooperative telephone company with a core belief that all telecommunications investments made by the cooperative should demonstrate value for its members. As described in this petition, the high cost of Intermodal LNP does not provide a benefit for its members since the subscribers that choose to have their numbers ported to a wireless carrier leave the cooperative. As such, the Petitioner is of the opinion that the national intermodal objectives of the Federal Communications Commission (FCC) likely do not

## II. ARSD § 20:10:32:39 REQUIREMENTS

The following information is provided in accordance with Section 20:10:32:39 of the Commission's rules.

(1) The applicant is Interstate Telecommunications Cooperative, Inc., 312 Fourth Street West, Clear Lake, SD 57226-0920, (605) 874-2181. The designated contacts are:

Washington, DC 20037  
(202) 659-0830

(2) As of 2003, ITC had 16,212 subscriber lines nationwide.

(3) ITC seeks to suspend the local number portability obligations in 47 U.S.C. §251(b)(2) of the Act.

(4) ITC requests suspension of the LNP requirement until there is evidence of demand for LNP and the per line cost of LNP is reduced. At a minimum, ITC requests suspension until six (6) months following the FCC's full and final disposition of the issues associated with the routing of calls between wireline and wireless providers in the Sprint Petition<sup>7</sup> and the porting interval and wireless to wireline porting in its pending

---

meet the public interest objectives of the Commission in the unique and sparsely populated rural telecommunications environment of South Dakota.

<sup>7</sup> *In the Matter of Sprint Corp. Petition for Declaratory Ruling Regarding the Routing and Rating of traffic by ILECs*, CC-Docket 01-92, Petition of Sprint, May 9, 2002 ("Sprint Petition").

FNPRM, at which time ITC may need to seek further Section 251(f)(2) relief based upon the economic impact of these decisions.

ITC also requests immediate temporary suspension of the 251(b)(2) requirement pending this Commission's consideration of this request until six (6) months following this Commission's final decision.

(5) ITC requests that the suspension of Section 251(b)(2) be effective no later than May 24, 2004. ITC requests that the temporary suspension of Section 251(b)(2) be effective immediately and in any event, no later than March 23, 2004.

(6) The information supporting this petition is contained on pages 6 through 16 of this Petition.

(7) ITC requests that the Commission grant a temporary stay or suspension of the local number portability requirements in Section 251(b)(2) of the Act.

### **III. SUMMARY**

This Petition requests that the Commission exercise its authority to address the effect of LNP on the Petitioner's cooperative members. As a cooperative telecommunications company, any negative financial impacts from porting obligations flow directly back to ITC's members. Commission action also is necessary to ensure that the members of the Petitioner are not forced to bear unnecessary and potentially wasted costs of implementing LNP to CMRS providers and Midcontinent Communications. As demonstrated herein and in Exhibits 1 and 2 (incorporated herein by reference), the Petitioner will experience substantial costs to equip its switches with porting capability. Thereafter, there are significant ongoing administrative costs. Further, as demonstrated herein, installation of LNP does not resolve the problems that will be encountered by the Petitioner.

tioner if it is required to implement intermodal LNP where the wireless carrier does not have a point of interconnection or numbers in the affected rate center. Unresolved implementation problems render the provision of LNP unduly economically burdensome and technically infeasible. It also will have a significant adverse economic impact on users of the Petitioner's telecommunications services. Accordingly, for the reasons provided herein, the Petitioner respectfully requests that the Commission grant it the suspension of any obligation to provide LNP.

#### **IV. BACKGROUND**

##### **A. The Petitioner is Eligible to Seek this Relief**

The Petitioner is a rural telephone company as defined by the Act and provides telecommunications services within South Dakota. Petitioner provides local exchange, exchange access and other telecommunications services to 14,529 access lines within its South Dakota service area. This service area encompasses sparsely populated localities, with only 2.43 access lines per square mile. A list of ITC's switches for which a suspension of LNP is requested is attached as Exhibit 3.

The Petitioner satisfies the criteria set forth in Section 251(f)(2), which provides in pertinent part, that "a local exchange carrier with fewer than two percent of the Nation's subscriber lines installed in the aggregate nationwide may petition a state commission for a suspension or modification"<sup>8</sup> of the number portability requirements. Pursuant to Section 251(f)(2), the Commission shall grant a petition for suspension or modification to the extent that, and for such duration as, the Commission determines that such suspension or modification:

---

<sup>8</sup> 47 U.S.C. § 251(f)(2)

(A) is necessary:

- (i) to avoid a significant adverse economic impact on users of telecommunications services generally;
- (ii) to avoid imposing a requirement that is unduly economically burdensome; or
- (iii) to avoid imposing a requirement that is technically infeasible; and

(B) is consistent with the public interest, convenience, and necessity.<sup>9</sup>

Section 251(f)(2) of the Act requires the Commission to act on this application within 180 days after receipt. Pending such action, the Commission “may suspend enforcement of the requirement or requirements to which the petition applies with respect to the petitioning carrier or carriers.” 47 U.S.C. § 251(f)(2) and SDCL 49-31-80.

ITC received requests for LNP from Midcontinent Communications (Midco), a wireline carrier, and from Western Wireless Corporation (Western Wireless), a wireless carrier. Midco has requested LNP in the Webster exchange, which is served by the Webster switch. Western Wireless has requested LNP in all of ITC’s twenty-six (26)<sup>10</sup> switches by May 24, 2004. ITC also has been contacted by Verizon Wireless regarding LNP. In addition, the Petitioner is aware that other wireless operators offer services in portions of Petitioner’s service area. The petitioner has included the potential interconnection requirements for these carriers in its cost estimates.<sup>11</sup>

Petitioner only has existing direct points of connection with wireless carriers at three (3) of its twenty-four (24) South Dakota exchanges. Petitioner has direct intercon-

---

<sup>9</sup> 47 U.S.C. § 251(f)(2)

<sup>10</sup> The Petitioner has twenty-six (26) total exchanges. Twenty-four (24) of these exchanges are in South Dakota. Two (2) of the exchanges are in Minnesota.

<sup>11</sup> Numerous upgrades will be required to support LNP. These upgrades in software and operational procedures will be required in order to meet the current LNP requirements, which will benefit only those sub-

nections with Verizon Wireless and Western Wireless at its Brookings Rural switch. It also has direct interconnections with Western Wireless at its Clark and Webster switches. Unless subscribers in other exchanges have subscribed to an optional EAS calling plan, the existing direct connections provide interconnection to the Petitioner's access lines in that rate center only. These direct connections provide switch-to-switch interconnections between the petitioner's switch and a specific CMRS switch, as defined by Telcordia.<sup>12</sup> Each CMRS provider would need similar direct interconnections to the Petitioner's switches.

Regarding the twenty-one (21) South Dakota exchanges with no direct interconnection to wireless carriers, if there are no common facilities or interexchange agreements, only conventional, switched toll routes remain; but no translating, routing, or rating rules have been established for this scenario. Some of the questions that need to be addressed in order to evaluate the cost and impact on consumers of LNP include: (1) where and how should the Petitioner interconnect with the wireless carriers, (2) is the point of interconnection within the LATA, and (3) how will the Petitioner be able to maintain the original rate center designation and rating when the number is ported to a point of interconnection that is located outside the original rate center. The uncertainty surrounding these and other questions are likely to cause significant customer confusion, resulting in increased costs for addressing customer service inquiries which adds to the overall cost impact of LNP implementation.

---

scribers that choose to leave the Cooperative, while encumbering the entire remaining cooperative membership with the burden of funding the porting benefit.

<sup>12</sup> See Telcordia Notes on the Networks, Wireless Networks, SR-2275, Issue 4, Figure 16-9. WSP-to-LEC Switched Interconnection for the Type 2A or Type 2B with SS7 Interfaces.

## B. Transporting to Outside Carrier Networks Should Not Be Compelled (Without Compensation)

One of the significant operational challenges to the *Order* is what appears to be an obligation on local exchange carriers to port a wireline number to a wireless carrier that allows the mobile subscriber to use the number outside the boundaries of the original rate center.

Section 251(2)(b) of the Act requires all LECs to “provide to the extent technically feasible, number portability in accordance with requirements prescribed by the Commission”.<sup>13</sup> The Act defines number portability as “the ability of users of telecommunication services to retain, *at the same location*, existing telecommunications numbers without impairment of quality, reliability, or convenience when switching from one telecommunications carrier to another.”<sup>14</sup> In promulgating its number portability rules, the FCC cited this definition and determined that the Act requires *service provider portability but not location portability*.<sup>15</sup> The FCC defined “service provider portability” as “the ability of end users to retain the same telephone numbers (that is, the same NPA and NXX codes and the same line numbers) when changing from one service provider to another.”<sup>16</sup> In contrast, “location portability” is “the ability of end users to retain the same telephone numbers *when moving* from one location to another, either within the area served by the same central office or between areas served by central offices.”<sup>17</sup>

---

<sup>13</sup> 47 U.S.C. § 251(b)(2)

<sup>14</sup> 47 U.S.C. § 153(30) (emphasis added)

<sup>15</sup> See *In the Matter of Telephone Number Portability, First Report and Order and Further Notice of Proposed Rulemaking*, in CC Docket No. 95-116 (rel. July 2, 1996) 11 FCC rcd 8352, 8447 (Number Portability Decision) (emphasis added)

<sup>16</sup> *In the Matter of Telephone Number Portability, Notice of Proposed Rulemaking*, 10 FCC Rcd 12350, 12355 (1995)

<sup>17</sup> *Id.* at 12356 (emphasis added)

In its *Number Portability Decision*, the FCC determined that mandating carriers to implement geographic location portability was not in the public interest.<sup>18</sup> As part of this decision, the FCC noted its concerns regarding the significant implementation issues arising from location portability. Specifically, the FCC found that, among other reasons, imposing location portability at this time would cause consumer confusion by the loss of the geographic identity of the telephone number. As a result, members would not know whether they were making a call to a nearby location or to a distant location, and may not know whether the call would be subjected to toll charges. With the change in location, LECs' service offerings, switching, and routing or originating calls to the ported number would need to be changed. The FCC also noted that commenting parties observed that location portability would create unnecessary and burdensome costs on carriers and on directory assistance, operator, and emergency services providers.<sup>19</sup> None of these public interest considerations have changed since the FCC's *Number Portability Decision*, *supra*. Moreover, many, if not most, of these same concerns arise in connection with intermodal LNP when the wireless carrier does not have interconnection or numbers in the LEC rate center.

Further, the FCC's *Order* is the subject of legal challenges. Until the uncertainty surrounding this *Order* is resolved, the obligations of LECs are unclear, which leaves the LECs subject to potential FCC enforcement of different interpretations of the LEC's obligation to implement number portability.

---

<sup>18</sup> *Number Portability Decision*, 11 FCC Rcd at 8449. The FCC also determined that it may decide to mandate implementation of geographic location portability in the future "if it would be in the public interest" and noted that carriers may provide geographic location portability "consistent with this Order" if they so choose. *Id.* at 8447. The FCC has not done so and the Petitioner is not aware of any LEC that has purposefully implemented ubiquitous geographic location portability.

<sup>19</sup> *Id.* at 8444-8445

The Commission should grant this Petition to ensure that the Petitioner's end user members do not pay for unnecessary and undesired costs associated with implementation and enforcement of uncertain requirements. It is prudent and in the public interest for the Commission to wait for the FCC and courts to resolve the outstanding issues by granting the Petitioner a suspension of the intermodal LNP requirements.

### **C. The *Order* Creates an Unfair Competitive Advantage for Wireless Carriers**

Under the conditions of the *Order*, LNP will happen in only one direction (to the wireless provider). Wireless service areas often cover many ILEC rate centers, allowing wireless carriers the possibility of a port-in of any landline subscriber where they have wireless coverage. However, wireline carriers can only port-in wireless subscribers when the rate centers align, which is seldom the case in rural South Dakota.

## **V. ARGUMENT**

The Act empowered the Commission with authority to balance any requests for number portability which may have potential harmful public interest consequences. While the Act imposes on all LECs obligations of interconnection, number portability, dialing parity, access to rights of way and reciprocal compensation,<sup>20</sup> Congress wisely invested the Commission with the authority to suspend or modify these obligations for LECs like ITC.

As demonstrated in Section IV.A, *supra*, the Petitioner is eligible to seek the relief requested herein from the Commission. Similarly, the Commission is authorized to grant such relief. As demonstrated below, the necessary criteria are satisfied for a Commission finding that granting this Petition is warranted.

---

<sup>20</sup> See generally 47 U.S.C. § 251(b)

**A. Criteria in Section 251(f)(2) for Granting the Relief Are Met**

**1. Section 251(f)(2)(A)(i) Criteria is Met (Avoid Significant Adverse Economic Impact of Users of Telecommunications Services Generally)**

A grant of this Petition will avoid a significant adverse economic impact on Petitioner's members and users of telecommunications services generally in South Dakota. As demonstrated herein and in Exhibits 1 and 2, the costs of implementing number portability as requested by Midco and as requested by the wireless carriers, are significant, not only with respect to the deployment of the software necessary to achieve porting capability, but also with respect to ongoing data costs and administration processes, and the establishment of the proper arrangements among the affected carriers.

Exhibit 1 shows the estimated known costs to implement LNP at this time for the Webster exchange only pursuant to an Interconnection Agreement with Midco. Exhibit 2 shows the estimated known costs to implement LNP at this time for all of the Petitioner's South Dakota exchanges to support intermodal LNP in accordance with the FCC's May 24, 2004 deadline. Pursuant to the FCC's rules, certain direct costs of LNP can be recovered from end users through a monthly surcharge over a five-year period.<sup>21</sup> All remaining costs must be recovered, if at all, through the carrier's general rates and charges. It should be noted that although some of the listed costs are fairly firm, such as Service Order Administration cost, other costs, such as port test and verification costs, are dependent on unknown factors, for example, the number of customers who ultimately port their number.

Potentially, the Petitioner can expect to receive requests for Interconnection from six (6) wireless carriers (Verizon, Western Wireless, Sprint PCS, Nextel, Midwest Wire-

---

<sup>21</sup> 47.C.F.R. § 52.33.

less, and RCC Wireless). All of these carriers have their wireless switching equipment in separate locations. In order to provide interconnection to these carriers, the Petitioner is including transport cost estimates from each of ITC's switches to these six (6) wireless carriers. Thus, Exhibit 2 also contains estimates for the recurring and non-recurring cost of transport, which essentially is the cost of installing direct connections to the wireless carriers. ITC has estimated these transport costs based on the existing network architecture configuration of the wireless carriers detailed above. Based on the existing configuration for these carriers, a dedicated facility is required from each ITC switch to the wireless carrier. This configuration is required to resolve the transport and routing issues caused by the implementation of LNP when the wireless carrier does not have a point of interconnection or numbers in the LEC's rate centers.

In its Order, the FCC acknowledged that LNP raised certain routing issues for rural carriers where no direct connection exists. The FCC, however, found that these issues did not need to be resolved in the LNP proceeding. Rather, the FCC indicated that they would be addressed in a pending Petition for Declaratory Ruling filed by Sprint Corporation.<sup>22</sup> This creates a difficult dilemma for LECs, like ITC, and this Commission with respect to the "public interest." Simply stated, installing direct connections will increase significantly the cost of LNP. However, without direct connections, subscribers who call a number that has been ported to a wireless carrier will incur a toll charge for that call, even though such calls previously were rated as local. This will occur because the wireless carriers' points of interconnection are outside of ITC's service territory. Therefore, calls to these carriers are routed to the subscriber's preferred interexchange carrier, unless

---

<sup>22</sup> *In the Matter of Sprint Corp. Petition for Declaratory Ruling Regarding the Routing and Rating of traffic by ILECs*, CC-Docket 01-92, Petition of Sprint, May 9, 2002 ("*Sprint Petition*").

the customer has included such calls in an optional extended area service (EAS) arrangement. Calls that are part of an optional EAS arrangement are routed through the appropriate EAS trunk.

With regard to the direct connections to the wireless carriers described in the preceding section, the Petitioner does not believe that the construction of these facilities is cost-justified based on the potential traffic between ITC and the wireless carrier and the potential for ported subscribers. If the facilities were feasible, it is likely that the wireless carriers would have implemented them already as they have in other areas of the country. Based on the projected traffic levels, it appears that the direct facilities between ITC and the wireless carriers required for LNP would be highly under-utilized and very inefficient.

It should be noted that Western Wireless has filed a petition at the FCC arguing that rate-of-return regulation should be eliminated for rural carriers like ITC, in part, because they are inefficient.<sup>23</sup> It would be ironic if ITC is forced to prop up Western Wireless and other wireless carriers by subsidizing facilities that these carriers have refused to pay for themselves.

ITC estimates that in order to implement LNP it will have recurring and non-recurring costs as set forth in Exhibit 2 attached hereto and incorporated herein by reference. As noted, certain direct recurring and non-recurring costs of LNP can be recovered from end users through a monthly surcharge over a period of five years and the remaining costs must be recovered, if at all, through the carrier's general rates and charges. In an attempt to approximate the difference in charges to end users during the five-year period

---

<sup>23</sup> See, Western Wireless Corporation *Petition for Rulemaking to Eliminate Rate-of-Return Regulation of Incumbent Local Exchange Carriers*, RM 10822, at 18 and 20, filed October 30, 2003.

and beyond, ITC's per-line cost estimate is based on recovering all non-recurring costs over five years. This may not reflect the actual LNP surcharge allowed by the FCC, however, because some of the non-recurring costs may not be recoverable through the surcharge. With this caveat in mind, ITC estimates that the cost of LNP for the Webster exchange only, as requested by Midco and applied to subscribers served by the Webster exchange, would increase line charges by \$3.00 per line per month for five years and \$2.00 per line per month thereafter.

ITC estimates that the cost of LNP for all South Dakota exchanges, including the estimated direct transport charges to all six (6) projected wireless service providers would increase line charges by \$13.00 per line per month for five years and \$12.00 per line per month thereafter. Should the Commission find that ITC should implement LNP for both Midco (the Webster exchange only) and the wireless carriers, there would be some overlap in the projected implementation costs identified in Exhibits 1 and 2, resulting in an estimated line charge increase of \$13.00 per line per month for five years and \$12.00 per line per month thereafter.

As demonstrated, the cost of transport adds significantly to the cost of LNP. Therefore, the transport issue must be resolved to determine the full cost of LNP and the full adverse economic impact on users of telecommunications in terms of unexpected toll charges. As stated, the FCC has indicated that it will address this issue when it considers the routing of calls between wireline and wireless carriers in the *Sprint Petition* proceeding. Therefore, at a minimum, Petitioner should not be required to provide LNP until six months after the FCC releases its decision on the *Sprint Petition*. This would allow Petitioner to assess the cost impact of LNP in light of the FCC's decision and either imple-

ment LNP or petition this Commission for a further suspension or modification of the LNP requirement.

The implementation costs in Exhibit 2 could increase significantly depending on the resolution of a number of issues at the FCC. For example, the FCC is examining whether the current four-day porting interval for wireline carriers should be shortened, perhaps to match the wireless porting interval of 2.5 hours. A shorter porting interval will significantly increase the cost of LNP because more systems would have to be automated and more personnel would have to be hired to take and implement porting requests.

The LNP costs in Exhibit 2 also do not include the cost of implementing wireless to wireline porting, which is under consideration by the FCC. In this regard, the FCC has asked for comment on whether wireline carriers should be required to absorb the cost of providing a customer with a ported wireless number with the same local calling area as the customer received from the wireless carrier and whether LECs should be required to provide LNP through foreign exchange (FX) and virtual FX service.<sup>24</sup> These proposals also would increase the cost of LNP; however, it is not clear to what extent.

**2. Section 251(f)(2)(A)(ii) Criteria is Met  
(Avoid Imposing a Requirement that is Unduly Economically Burdensome)**

Further, a grant of a suspension of the LNP rules would avoid imposing a requirement that is unduly economically burdensome to the Petitioner and its members. As a small telephone company, the Petitioner has a limited customer base over which to

---

<sup>24</sup> It is not clear what “virtual FX” service would entail as the FCC did not define it and Petitioner offers no such service.

spread its costs.<sup>25</sup> As noted in Exhibit 2, the costs associated with implementing LNP capability and the on-going administrative expenses are significant.

The assessment of a new LNP surcharge on end users or an increase in local rates would make ITC's service offering less competitive with the services provided by other carriers, such as wireless carriers. Wireless carriers already enjoy a number of competitive advantages over wireline carriers. For example, because of their FCC licensed service areas, wireless carriers have larger local calling areas, larger service territories and more potential customers to absorb the cost of LNP. By increasing the cost of service, LNP would make wireline services even less competitive with wireless services.

In addition, if the total cost of LNP is assigned to ITC's subscribers through a surcharge and local rate increases, some segment of ITC's subscribers may discontinue service or decrease the number of lines to which they subscribe. The resulting reduction in line count would increase further the per-subscriber cost of LNP, which, in turn, could lead to more rate increases followed by additional losses in access lines.

Moreover, pursuant to the FCC's Order, although wireline carriers have been ordered to port numbers to wireless carriers when the wireless carrier has no point of interconnection or numbers in the LEC's rate centers, the FCC does not require wireless carriers to port numbers under the same circumstances as wireline carriers, even where the wireline carrier may choose to accept such ports. Thus, the current intermodal porting requirement is a one-way requirement – ITC can lose customers through porting to the wireless carriers, but it cannot gain customers from them.

---

<sup>25</sup> See *id.* at 262 (The per line cost of implementing the technology for number pooling, which is the same technology that is used to implement number portability, would "be significantly higher for small and rural carriers operating outside of the largest 100 MSAs than for carriers operating inside urban and metropolitan areas because of these carriers' limited customer bases.")

It also is unduly economically burdensome to require ITC to implement LNP when a number of implementation issues are not resolved. It would be more efficient and less costly to implement LNP only once, after the LNP parameters are more certain, rather than require carriers to implement LNP when important issues are unresolved (such as the specifics of the direct trunk connection required for intermodal porting) or could be changed (such as whether the porting interval will be reduced).

**3. Section 251(f)(2)(A)(iii) Criteria is Met  
(Avoid Imposing a Requirement that is Technically Infeasible)**

A grant of the Petition with respect to intermodal portability would avoid imposing a requirement that is technically infeasible, at least within the timeframe of the Order. While porting equipment can be installed, implementation of intermodal LNP cannot be achieved absent the establishment of terms and conditions with the CMRS providers for the twenty-one (21) South Dakota exchanges of the Petitioner for which there is no direct interconnection.

**B. Section 251(f)(2)(B) Criteria is Met  
(Consistent with Public Interest, Convenience, and Necessity)**

Finally, a grant of this Petition will serve the public interest. Section 251(f)(2)(B) provides that the Commission is to determine that the requested suspension “is consistent with the public interest, convenience and necessity.”<sup>26</sup> As an initial matter, by granting the suspension, the Commission would avoid the potential waste of resources or, at the very least, diminish the waste that would occur in the absence of the resolution of the challenges to, and the further rulemaking proceedings of, the FCC’s *Order* clarifying issues related to the porting interval and wireline-to-wireless number portability. In addi-

---

<sup>26</sup> 47 U.S.C. § 251(f)(2)(B)

tion, the standard of public interest, convenience, and necessity consists of an evaluation of the benefit that consumers will receive from LNP compared to the costs of its implementation and use. Central to this evaluation is the level of demand that exists for LNP in ITC's service area.

ITC believes that the current demand for LNP is very small or non-existent. As of the date of this filing, no ITC customer has ever made an inquiry to ITC regarding LNP or a request for LNP. With respect to wireless LNP, nationwide, to date, the demand for wireless porting has been far less than expected and most ports have been from one wireless carrier to another. Wireline to wireless porting appears to be a small fraction of wireless porting in general.<sup>27</sup> According to NeuStar, 95% of wireless ports have been from one wireless carrier to another and only 5% of wireless ports were between wireline and wireless carriers.<sup>28</sup> With lack of quality and incomplete coverage of ITC's existing service area by the existing wireless carriers, ITC projects that the percentage would be even smaller than in other parts of the nation. ITC is projecting approximately two (2) intermodal ports per month.<sup>29</sup> Based on this small number of ports, the percentage of ITC access lines requiring a port to a wireless carrier is well under one (1) percent. Accordingly, there appears to be little, if any, demand for LNP and, absent such demand, no public benefit will be derived from LNP.

Even if some level of LNP demand develops in the future, the costs that would be incurred by ITC to implement and maintain LNP, which ultimately would be borne by

---

<sup>27</sup> See "Survey Finds Little Impact From LNP", *RCR Wireless News*, February 9, 2004 ed., reporting that according to a consumer survey report from CFM Direct, very few telecommunications customers have switched their wireline phone numbers to wireless.

<sup>28</sup> See NARUC Notebook, *Communications Daily*, Vol. 24, No. 46, p.4 (March 9, 2004).

<sup>29</sup> While actual industry figures are not available, most wireless carriers are currently experiencing a porting rate of between three percent (3%) and six percent (6%). Of these ports, it is estimated that less than 1% are intermodal.

subscribers, would not be justified to provide the benefit of number portability to a few end users. Nevertheless, all of the subscribers of the Petitioner would be adversely impacted by an increase in rates in order to accommodate any LNP requests of Midco and the CMRS providers.<sup>30</sup> The Petitioner should not expend its available resources on an investment that has so few, if any, benefits. Such resources are much better spent on the development of broadband or other network improvements that hold real advantages for all of the Petitioner's members and South Dakota as a whole. If the Petitioner is forced to implement LNP, existing capital investments for broadband implementation will be diverted from this deployment to implement LNP.

Moreover, the rating and routing issue associated with wireline to wireless portability as currently ordered by the FCC, and the resulting customer confusion, is contrary to the public interest.

Finally, if ITC must implement LNP, all carriers with EAS arrangements with ITC and their customers will be impacted because the other carriers will have to LNP dip all EAS calls. ITC currently has EAS arrangements with Venture Communications, Inc., Brookings Municipal Utilities (d/b/a Swiftel Communications), and James Valley Telecommunications. This would increase the cost of EAS between ITC and these carriers and could result in a loss of EAS options to the customer or an increase in the cost of the optional EAS service.

Accordingly, grant of the requested suspension is consistent with the public interest, convenience and necessity.

---

<sup>30</sup> See also *Number Resource Decision*, 17 FCC Rcd at 262 (Imposing the cost of implementing the technology for number pooling, which is the same technology that is used to implement number portability on smaller and rural carriers, "may delay efforts to bring advanced services to rural subscribers.")

**V. REQUEST FOR IMMEDIATE SUSPENSION PENDING  
CONSIDERATION OF THIS PETITION IS WARRANTED  
AND NECESSARY TO SERVE THE PUBLIC INTEREST**

Section 251(f)(2) provides that the Commission is to act on this Petition within 180 days.<sup>31</sup> Pending such action, the Commission “may suspend enforcement of the requirement or requirements to which the petition applies with respect to the petitioning carrier or carriers.”<sup>32</sup> ITC requests immediate temporary suspension of the 251(b)(2) requirement pending this Commission’s consideration of this request until six (6) months following this Commission’s decision. Suspension of enforcement would allow rational public policy decision-making without a “rush-to-judgment” based on the impending May 24, 2004, deadline.<sup>33</sup> Moreover, without an immediate suspension, Petitioner may be forced to start expending capital and personnel resources toward meeting the impending May 24, 2004, deadline. All such efforts may ultimately be wasted effort depending on the Commission’s decision. As the May 24, 2004 implementation deadline for inter-modal LNP draws near, the Petitioner is already beginning to feel the financial impact of LNP deployment. The resources that the petitioner is expending to plan for the implementation of LNP are being diverted from future broadband implementation capital investments. Such investments in broadband network architecture benefit all of the cooperative members, the economies of the Petitioner’s service area, and South Dakota as a whole. The implementation of LNP does not appear to serve the public interest. In addi-

<sup>31</sup> 47 U.S.C. § 251(f)(2)

<sup>32</sup> *Id.*

<sup>33</sup> The Nebraska Public Service Commission granted a Motion for Interim Relief *In the Matter of the Application of Great Plains Communications, Inc., Blair, for Suspension or Modification of the Federal Communications Commission Requirement to Implement Wireline-Wireless Number Portability Pursuant to 47 U.S.C. § 251(f)(2)*, Docket C-3096. The Hearing Officer found that “the 180-day timeframe in which the Commission must render its decision, and because of the number of applications filed with the Commission seeking suspension under 47 U.S.C. § 251(f)(2), it would be difficult for the Commission to hold an evi-

tion, the requirement to implement LNP by May 24, 2004 without addressing the technical and interconnection issues is not a wise use of the Petitioner's available capital.

## VI. CONCLUSION

As demonstrated, ITC has met the criteria set forth in 47 U.S.C. § 251(f)(2)(A) and the suspension requested in this proceeding is consistent with the public interest, convenience and necessity requirement set forth in 47 U.S.C. § 251(f)(2)(B). Accordingly, the Commission must grant the petition for suspension or modification.

ITC requests suspension of the LNP requirement until there is evidence of demand for LNP and the per line cost of LNP is reduced. At a minimum, suspension should be granted until six (6) months following the FCC's full and final disposition of the issues associated with the porting interval and wireless to wireline LNP in the Further Notice of Proposed Rulemaking and the routing of calls between wireline and wireless providers in the *Sprint Petition*, at which time ITC may need to seek further Section 251(f)(2) relief based upon the economic impact of these decisions.

ITC also requests an immediate temporary suspension, pending this Commission's consideration of this request, until six (6) months following this Commission's decision, as discussed herein.

WHEREFORE, ITC respectfully requests the Commission to:

(A) Issue an interim order that suspends any obligation that may exist for ITC to provide LNP until six (6) months after entry of a final order herein;

(B) Issue a final order that grants a permanent suspension of ITC's obligation to implement LNP until the conditions are met as described herein; and

---

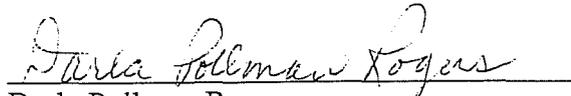

dentiary hearing and make its ruling on this and every application for suspension or modification of the LNP requirement filed with the Commission prior to the May 24, 2004, deadline."

(C) Grant ITC such other and further relief that may be proper.

Accordingly, the Petitioner respectfully requests that the Commission grant this  
Petition.

Dated this twelfth day of March, 2004.

BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA

---

IN THE MATTER OF THE PETITION  
OF INTERSTATE TELECOMMUNICA-  
TIONS COOPERATIVE, INC. FOR  
SUSPENSION OR MODIFICATION OF  
§ 251(b)(2) OF THE COMMUNICA-  
TIONS ACT OF 1934 AS AMENDED

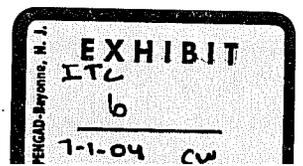

Docket No. TC04-054  
DIRECT TESTIMONY OF  
JERRY HEIBERGER

DIRECT TESTIMONY OF JERRY HEIBERGER

FILED ON BEHALF OF

INTERSTATE TELECOMMUNICATIONS COOPERATIVE, INC.

June 30, 2004

1 **Q. Please state your name, title, business address, and telephone number for the**  
2 **record.**

3 A. My name is Jerald (Jerry) J. Heiberger. I am the General Manager for Interstate  
4 Telecommunications Cooperative, Inc., located at 312 4<sup>th</sup> St. West, Clear Lake, South  
5 Dakota, 57226. My telephone number is (605) 874-2181.

6 **Q. By whom are you employed and in what capacity?**

7 A. I am employed by Interstate Telecommunications Cooperative, Inc. (ITC)  
8 headquartered in Clear Lake, SD.

9 **Q. Please briefly describe your employment duties.**

10 A. As the General Manager of ITC and its two wholly owned subsidiary companies,  
11 Interstate Satellite Services, Inc. and ITC Rural Economic Development Inc., I am  
12 responsible for managing all activities of the cooperative and its subsidiaries directly  
13 or through subordinate managers. I report to an eleven person board of directors. I  
14 interpret and implement board policies. I plan, direct, coordinate and control all lines  
15 of the business with the assistance of my manager and supervisory personnel. I  
16 determine the objectives, establish operating procedures and ensure the success of  
17 companies within the guidelines and authority established by the board of directors. I  
18 ensure that all operations comply with applicable federal, state and local regulations. I  
19 am the primary representative of ITC before regulatory agencies, legislative bodies  
20 and industry associations. I evaluate new business opportunities and prepare  
21 recommendations to the board based on my analysis.

1 **Q. As part of your duties as General Manager, were you involved with negotiating**  
2 **the Interconnections Agreement, including the issue of Local Number Portability**  
3 **(LNP) with Midcontinent Communications (Midcontinent)?**

4 A. Yes. I directly negotiated with Midcontinent on these issues.

5 **Q. What issues does your testimony address?**

6 A. I will show that ITC never agreed to provide LNP to Midcontinent and that ITC  
7 specifically reserved the right to pursue its legal options, including filing a petition for  
8 suspension or modification pursuant to Section 251(f) (2). Further, I will show that  
9 Midcontinent knew that ITC may not provide LNP and agreed to this in the  
10 Interconnection Agreement. Finally, I will show that ITC proceeded in good faith to  
11 examine the cost and other issues concerning LNP; kept Midcontinent informed of its  
12 progress; and that Midcontinent never expressed any dissatisfaction with ITC's  
13 efforts until ITC informed Midcontinent that it would file a petition for suspension or  
14 modification of LNP before the South Dakota Public Utilities Commission.

15 **Q. When did Midcontinent request interconnection from ITC?**

16 A. Midcontinent served ITC with a copy of its request for interconnection in the Webster  
17 exchange on April 18, 2003. The document included a request that ITC and  
18 Midcontinent personnel meet within two weeks to establish a schedule and  
19 framework for negotiations to develop an Interconnection Agreement. On May 1,  
20 2003, two weeks after the application was filed with the South Dakota Public Utilities  
21 Commission, Midcontinent and ITC met to discuss its request.

22

1 **Q. In her testimony, Ms. Lohnes states that during the May 1, 2003 meeting, “A**  
2 **broad discussions was held on what services Midcontinent planned to provide,**  
3 **which included LNP.” Is this your recollections of events?**

4 A. No. With respect to Ms. Lohnes’ statement concerning the discussion of LNP, my  
5 recollection is that during this meeting, Midcontinent stated that they would be  
6 applying for their own NXX and that they may request LNP from ITC.

7 **Q. When did Midcontinent raise the issue of LNP again?**

8 A. Midcontinent did not raise the issue of LNP again until early September 2003. By  
9 this time, the parties had reached agreement on most provisions in the Interconnection  
10 Agreement.

11 **Q. Describe what took place during the negotiation of the Interconnection**  
12 **Agreement with respect to LNP.**

13 A. On September 15, 2003, Midcontinent proposed the addition of a provision to the  
14 agreement to address LNP. The provision proposed by Midcontinent stated that the  
15 “Parties shall provide Number Portability” and further stated that the “Parties will  
16 follow the LNP (Long-term Number Portability) provisioning process recommended  
17 by the North American Numbering Council (NANC) and adopted by the FCC.” A  
18 copy of the full text of Midcontinent’s proposal is attached as Exhibit 1 to my  
19 testimony. This language makes it clear that if ITC had accepted Midcontinent’s  
20 proposal it would be agreeing to provide LNP. It further makes it clear that  
21 Midcontinent was requesting long-term number portability and not interim number  
22 portability.

23

1 **Q. Did ITC agree to this proposal?**

2 A. No. ITC did not accept this proposed language.

3 **Q. What happened next?**

4 A. Midcontinent proposed a revised provision, attached hereto as Exhibit 2. This  
5 provision still stated that the parties “shall” provide number portability. It also  
6 contained a reservation of rights for Midcontinent “should the parties be unable to  
7 agree upon terms and conditions for number portability...”

8 **Q. Did ITC agree to this proposal?**

9 A. No.

10 **Q. Then what happened?**

11 A. ITC suggested a number of changes to Midcontinent’s language. ITC deleted the  
12 language that stated ITC shall provide number portability and inserted language to  
13 make it clear that ITC was not agreeing to provide number portability. Specifically,  
14 ITC inserted language stating that “[t]o the extent that [number portability] is  
15 provided” it would be provided in accordance with the rules and regulations  
16 prescribed by the FCC and the South Dakota Public Utilities Commission. Further,  
17 ITC reserved its rights under the Act and South Dakota law, which rights “may be  
18 asserted *should the parties be unable to agree to provide number*  
19 *portability...*”(emphasis added). The full text of this proposal is attached as Exhibit  
20 3.

21 **Q. Did Midcontinent agree to this proposal?**

1 A. No. Midcontinent submitted an alternate first sentence to the proposed language  
2 which stated that the parties would negotiate in good faith “to achieve” number  
3 portability. A copy of the text of this proposal is attached as Exhibit 4.

4 **Q. Did ITC agree to this proposal?**

5 A. No. ITC struck the words “to achieve” from the first sentence to eliminate any  
6 language that would indicate that ITC was agreeing to provide number portability. A  
7 copy of the text of this proposal is attached as Exhibit 5.

8 **Q. Did Midcontinent agree to this change?**

9 A. Yes.

10 **Q. In her testimony, Ms. Lohnes states that the Interconnection Agreement was**  
11 **signed by ITC on November 3, 2003; that it was signed by Midcontinent on**  
12 **November 6, 2003; and that it was approved by the Commission on December**  
13 **17, 2003. Do you agree with these dates?**

14 A. Yes.

15 **Q. After the parties agreed to this language, please describe what ITC did.**

16 A. ITC began investigating the cost and implementation of LNP. ITC’s investigation  
17 began in November 2003 and continued through February 2004. In March 2004, ITC  
18 filed its petition, asking the South Dakota Public Utilities Commission to suspend or  
19 modify the requirements of Section 251(b)(2) of the Act concerning the provision of  
20 local number portability.

21 **Q. ITC’s opposition to Midcontinent’s Motion To Compel and Ms. Lohnes’**  
22 **testimony contain e-mail messages between the parties and describe voice mail**  
23 **messages and telephone communications between the parties concerning LNP.**

1 Do you agree that these are the total communications between the parties  
2 concerning LNP after the Commission approved the Interconnection  
3 Agreement?

4 A. To the best of my knowledge, these are the total communications between the parties  
5 concerning LNP.

6 **Q. Prior to filing its Motion to Compel, did Ms. Lohnes or anyone else at  
7 Midcontinent ever tell you that ITC's responses concerning LNP were  
8 unsatisfactory or that Midcontinent believed ITC was not negotiating in good  
9 faith?**

10 A. No. You can see from the e-mail messages that Ms. Lohnes never indicated that my  
11 responses were unsatisfactory. The first time Midcontinent stated that it believed ITC  
12 was not negotiating in good faith was in its Motion To Compel filed at the South  
13 Dakota Public Utilities Commission.

14 **Q. In her testimony, Ms. Lohnes states that she was "under the impression that Mr.  
15 Heiberger simply was delaying the process, and the context of his responses  
16 corroborates that conclusion." As an example, Ms. Lohnes states that "the  
17 January 29<sup>th</sup> conversation referenced a board meeting at which LNP would be  
18 discussed, yet by February 24<sup>th</sup> Mr. Heiberger still had not contacted me, nor  
19 did he ever mention what happened a (sic) the board meeting." Please explain  
20 why you did not respond to Ms. Lohnes until February 24<sup>th</sup>.**

21 A. At the time of Midcontinent's request, ITC had not been required to implement LNP  
22 and ITC had no experience with the estimated costs and implementation issues in  
23 connection with LNP. Once the LNP provision was included in the Midcontinent

1 Interconnection Agreement, ITC personnel began researching the anticipated costs  
2 and implementation issues which we would be faced with if we deployed LNP.  
3 Because this was a new issue for ITC, it took time for ITC to gather the pertinent  
4 information. Once the overall costs and issues were developed, a decision was made  
5 to file for a suspension or modification of the LNP requirements because of the  
6 projected costs our cooperative members would have to bear. I was not able to  
7 discuss LNP deployment with Midcontinent until all aspects of deploying LNP  
8 services were identified and discussed with the ITC board of directors, consultants  
9 and legal counsel.

10 With respect to Ms. Lohnes' implication that I should have contacted her before  
11 February 24, I note that during the January 29<sup>th</sup> conversation Ms. Lohnes did not ask  
12 for a response by a specific date. Furthermore, Ms. Lohnes made no further attempt  
13 to contact me between the time period of January 29<sup>th</sup> to February 24<sup>th</sup>. If my lack of  
14 response was unacceptable, I would expect Ms. Lohnes to have contacted me.

15 I also note that pursuant to the Interconnection Agreement, the LNP negotiation  
16 period did not end until May 2004. However, ITC informed Midcontinent of its  
17 intent to file a petition for suspension of LNP on May 4, 2004, well before the end of  
18 the negotiation period.

19 **Q. Did Midcontinent ever request interim number portability?**

20 A. No. The first time Midcontinent ever mentioned interim number portability was in the  
21 direct testimony of W. Tom Simmons, filed on May 13, 2004.

22

1 **Q. Did Midcontinent contact you in any way to pursue negotiations of interim**  
2 **number portability?**

3 A. No. Midcontinent has never requested interim number portability nor has it ever  
4 asked ITC to negotiate interim number portability.

5 **Q. Are you prepared to discuss interim local number portability with Midcontinent?**

6 A. Yes.

7 **Q. After ITC informed Midcontinent that ITC would file a petition for suspension**  
8 **or modification of the LNP requirement; did Midcontinent contact you for**  
9 **further negotiations in connection with LNP in the Webster exchange?**

10 A. No. Since ITC informed Midcontinent that it would file a Petition for Suspension or  
11 Modification, Midcontinent has not contacted ITC for further negotiations in  
12 connection with LNP in the Webster Exchange.

13 **Q. What do you conclude from the fact that Midcontinent has not contacted you in**  
14 **connection with negotiations for LNP in the Webster exchange since you**  
15 **informed Midcontinent of ITC's intention to file a suspension petition?**

16 A. I conclude that the real purpose of Midcontinent's Motion to Compel is not to compel  
17 ITC to negotiate because if negotiation is what Midcontinent really wanted, I would  
18 expect them to contact me. Rather, it appears that Midcontinent hopes to influence  
19 the Commission's decision on ITC's LNP suspension petition by alleging that ITC  
20 engaged in "bad faith negotiations."

21 **Q. Does this conclude your testimony?**

22 A. Yes.

**EXHIBIT 1**

September 15, 2003

Memo

To: Ben Dickens and Jerry Heiberger

From: Dave Gerdes

Re: ITC Interconnection Agreement; Our file: 4056

*What follows is what I understand to be standard number portability language from a BOC interconnection agreement which I have modified to fit our situation. I am suggesting that the language immediately below is probably sufficient for our purposes, because the internal references will yield the process outlined in the succeeding numbered paragraphs. However, if you would prefer to address the process in more detail, we can incorporate the succeeding paragraphs (in such form as we finally agree).*

*I have made some modifications to address the size of the exchange, most notably in paragraph 10.*

#### D. NUMBER PORTABILITY

As provided in Act Section 251 (b)(2), the Parties shall provide Number Portability ("NP") in accordance with rules and regulations as from time to time prescribed by the FCC and the Commission. Location Routing Number (LRN) is currently being used by the telecommunications industry to provide NP, and will be used by the Parties to implement LNP between their networks. The Parties will follow the LNP (Long-term Number Portability) provisioning process recommended by the North American Numbering Council (NANC) and adopted by the FCC. In addition, the Parties agree to follow the LNP ordering procedures established at the Ordering and Billing Forum (OBF). The Parties shall provide LNP on a reciprocal basis.

*All of the following language implements the basic obligations described above. It is omitted here in order to use a simple number portability provision consistent with the structure of the agreement. If the parties wish, the following language can be used, with the paragraph above numbered one and indented appropriately.*

2. LNP shall be provided when a Customer of one Party ("Party A") elects to become a Customer of the other Party ("Party B") and the Customer elects to utilize the original telephone number(s) corresponding to the Telephone Exchange Service(s) previously provided by Party A, in conjunction with the Telephone Exchange Service(s) provided by Party B. After Party B has received an appropriate authorization in accordance with Applicable Law from a Customer and sends a LSR to Party A, Parties A and B will work together to port the customer's telephone number(s) from Party A's network to Party B's network. In accordance with Applicable Law, each Party will

maintain evidence of authorizations and, upon request, provide copies of such evidence to the other.

3. When a telephone number is ported out of Party A's network, Party A will remove any non-proprietary line based calling card(s) associated with the ported number(s) from its Line Information Database ("LIDB"). Reactivation of the line-based calling card in another LIDB, if desired, is the responsibility of Party B or Party B's Customer.

4. When a Customer of Party A ports his or her telephone number(s) to Party B and the Customer has previously secured a reservation of line numbers from Party A for possible activation at a future point, these reserved but inactive numbers may be ported along with the active numbers to be ported, provided the numbers have been reserved for the Customer. Party B may request that Party A port all reserved numbers assigned to the Customer or that Party A port only those numbers listed by Party B. As long as Party B maintains reserved but inactive numbers ported for the Customer, Party A shall not reassign those numbers. Party B shall not reassign the reserved numbers to another Customer.

5. When a Customer of Party A ports his or her telephone number(s) to Party B, in the process of porting the Customer's telephone number(s), Party A shall implement the ten-digit trigger feature 48 hours prior to Party B's due date. If, in the case of Direct Inward Dialing (DID) numbers and Remote Call Forwarding numbers the LNP ten-digit trigger can not be used, the Parties shall coordinate the Customer's porting using procedures developed by the North American Numbering Council (NANC), or other 'hot cut' procedures as may be mutually agreed to. When Party A receives the porting request, the LNP ten-digit trigger shall be applied to the Customer's line before the due date of the porting activity. When the LNP ten-digit trigger can not be used, Party A and Party B must coordinate the disconnect activity. The Parties agree that changes to a scheduled port will be permitted until 5PM the day of the port and that a due date change may be required. When Party B does not require loop facilities from Party A and the LNP ten-digit trigger has been provisioned, Party A agrees to not disconnect the LNP ten-digit trigger and associated line translations until 11:59 PM on the day of the scheduled port. When a porting request of Party B requires loop facilities from Party A or when the ten-digit trigger is not available from Party A, the Parties must coordinate the disconnection of the loop and/or switch facilities from Party A's network with the activation of the loop and/or switch facilities on Party B's network.

6. The Parties shall furnish each other with the Jurisdiction Information Parameter (JIP) in the Initial Address Message (IAM), containing a Local Exchange Routing Guide (LERG)-assigned NPA-NXX (6 digits) identifying the originating switch on calls originating from LNP-capable switches.

7. Where LNP is commercially available, the NXXs (current and new) in the office shall be defined as portable, except as noted in 14.2.7, and translations will be changed in the Parties' switches to open those NXXs for database queries in all applicable

LNP-capable offices within the LATA of the given switch(es). On a prospective basis, all newly deployed switches will be equipped with LNP capability and so noted in the LERG.

8. Both Parties' use of LNP shall meet the performance criteria specified by the FCC. Both Parties will act as the default carrier to perform LRN queries for the other Party in the event that either Party is unable to perform the routing necessary for LNP, according to the terms and conditions contained in the default carrier's Tariff. Each Party has the right to block default-routed calls entering its network in order to protect the public switched network from overload, congestion, or failure propagation.

9. When a ported telephone number is disconnected, i.e., the telephone number is no longer in service by the original Customer, the ported telephone number will be released back to the donor carrier from which the telephone number had been ported. In addition, when a ported number is disconnected, both Parties shall agree to adhere to the Industry Numbering Committee (INC) Guidelines for the Aging and Administration of Disconnected Telephone Numbers, contained in document INC99-1108-024, dated November 8, 1999.

10. Each Party shall provide LNP using the following provisioning intervals for porting 20 or fewer numbers per customer:

Party B will make commercially reasonable efforts to respond to LNP requests with Firm Order Confirmation within 24 hours (excluding weekends and holidays) of receipt of valid requests; or

Party B will make commercially reasonable efforts to respond to LNP requests with query or error notification within 24 hours (excluding weekends and holidays) of receipt of invalid requests.

Porting orders will be subject to the schedule implemented under the auspices of the Commission. In the absence of such schedule, porting orders will be processed within 3 business days. When requested by Party B, Party A shall provide sufficient workforce to implement the port and to ensure necessary escalation if needed in the event of problems outside of regular working hours.

**EXHIBIT 2**

D. NUMBER PORTABILITY

The parties shall provide number portability on a reciprocal basis under terms and conditions to be negotiated and added to this agreement by amendment, effective not more than six months from the date of this agreement. Number portability will be provided in accordance with the rules and regulations prescribed by the FCC and the Commission. It is agreed that Midcontinent reserves all rights it now has associated with number portability under the Act and South Dakota Law, which may be asserted should the parties be unable to agree upon terms and conditions for number portability as contemplated by this paragraph.

**OF THE COMMUNICATIONS ACT OF 1934 AMENDED**

**Docket TC04-054**

**JUNE 25, 2004**

1 INTRODUCTION

2

3 **Q. PLEASE STATE YOUR NAME FOR THE RECORD:**

4 A. W. Thomas Simmons

5 **Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

6 A. I am employed by Midcontinent Communications as the Vice President of Public  
7 Policy.

8 **Q. WHAT ARE YOUR CURRENT RESPONSIBILITIES?**

9 A. I am the corporate officer responsible for regulatory, government and community  
10 affairs, public and media relations, and represent our telephone, cable and Internet  
11 product teams on policy issues.

12 **Q. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND?**

13 A. I hold a Bachelor and Masters degrees in Psychology and have been a Midcontinent  
14 Vice President since 1989. My first Midcontinent assignment was with the broadcast  
15 division as a general manager of four South Dakota radio stations. In 1995, I joined  
16 the telecommunications division, Midco Communications, as their general manager.  
17 From 1995 to 2001, I led the team that developed our local exchange operation and  
18 developed the commercial and network services group.

19 **Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THIS COMMISSION?**

20 A. Yes. I have participated in numerous issues and meetings, formally filing testimony  
21 "In the Matter of the Establishment of Switched Access rates for US West  
22 Communications, Inc", Docket TC 96-107, "In the Matter of the Analysis of Qwest  
23 Corporation's Compliance With Section 271c of the Telecommunications Act of 1996",

1 Docket TC 01-165, and “In the Matter of the Application of Qwest Corporation to  
2 Reclassify Local Exchange Services as Fully Competitive”, Docket TC 03-057.

3 **WHAT ISSUES DOES THIS TESTIMONY ADDRESS?**

4 A. The importance of Local Number Portability and provision alternatives.

5 **WHAT IS THE IMPORTANCE OF LOCAL NUMBER PORTABILITY?**

6 Q. One of the most significant barriers to competition is the inability of customers to  
7 switch from one telephone provider to another and retain the same number, which is  
8 why Congress directed telephone providers in the Telecommunications Act of 1996  
9 to provide Local Number Portability. Recognizing that there would be initial  
10 complications in developing number portability, the “96 Act” addressed specific  
11 options.

12 **ARE THERE OPTIONS AVAILABLE FOR DELIVERING FOR PORTING  
13 LOCAL NUMBERS?**

14 Q. The options are Long Term or Permanent Number Portability and Interim Number  
15 Portability.

16 **WHAT ARE THE DIFFERENCES BETWEEN THESE METHODS?**

17 Q. Long term Number portability is generally defined as the ability of the end user to  
18 permanently retain, at the same location, existing telephone numbers without  
19 impairment of quality reliability or convenience when changing from one service  
20 provider to another. End users can easily choose providers within a rate center and  
21 keep their number. Under long term number portability, proper call routing is  
22 accomplished by “dipping” into the LNP database to obtain the local routing number  
23 (LRN), and the call is routed directly to the switch of the customers chosen provider.

1 Interim Number Portability is most commonly provisioned using the remote call  
2 forwarding method (RCF) which requires the customer's directory number to be  
3 retained in the original providers switch and a second "shadow" number to be  
4 assigned in the requestor's switch.

5 **Q. WHAT ARE THE SIGNIFICANT CHARACTERISTICS OF THESE**  
6 **DIFFERING METHODS?**

7 A. Long Term or Permanent Number Portability is the best solution. After a customer  
8 has made the choice to change service providers, calls are routed is as directly as  
9 they were with the previous provider. It's as if the customer had been initially set  
10 up with the provider of choice. There are, however, significant costs in initially  
11 setting up permanent portability. Interim Number Portability is relatively  
12 inexpensive to establish. The major drawbacks may include feature limitations  
13 which may impact proper caller ID transmission for a call originating from a  
14 shadow number. An RCF call requires a line from the original provider and a line  
15 from the new provider to remain seized for the duration of a call.

16 **Q. PLEASE SUMMARIZE YOUR TESTIMONY.**

17 A. The Telecommunications Act of 1996 was enacted to establish a national  
18 framework to promote competition and reduce unnecessary regulation. Congress  
19 recognized that bringing competition to local phone markets would speed high  
20 quality services, advanced services, and competitive prices to customers by  
21 offering them choices. Competition is all about choice. In reality, what choice do  
22 customers have if they are held captive to a company that "owns" their telephone  
23 number. I offer the information on Interim Number Portability as a cost effective,

1           albeit temporary option until real impact can be measured and properly sized.  
2           While I can't counter with specific details, the cost estimates of permanent number  
3           portability offered by the petitioner strike me as extraordinarily high. Perhaps  
4           after a reasonable period of time and experience in offering local number  
5           portability the cost of equipment and back office work flow can be more accurately  
6           predicted.

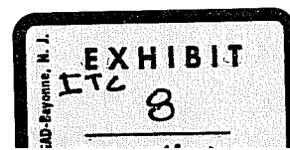

7           **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

8           A. It does.

**DIRECT TESTIMONY  
OF  
MARY LOHNES  
ON BEHALF OF  
MIDCONTINENT COMMUNICATIONS  
IN THE MATTER OF THE PETITION OF  
INTERSTATE TELECOMMUNICATIONS COOPERATIVE, INC.  
FOR SUSPENSION OF MODIFICATION OF 47 U.S.C. SECTION 251(b)(2) OF  
THE COMMUNICATIONS ACT OF 1934 AMENDED**

Docket TC04-054

June 25, 2004

## **INTRODUCTION**

### **Q. PLEASE STATE YOUR NAME FOR THE RECORD:**

A. Mary Lohnes

### **Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

A. I am employed by Midcontinent Communications as Regulatory Affairs Manager.

### **Q. PLEASE BRIEFLY DESCRIBE YOUR EDUCATIONAL BACKGROUND AND EMPLOYMENT EXPERIENCE.**

A. I hold a B.S. in Organizational Behavior and Management from Sioux Falls College, Sioux Falls, SD. My employment with Midcontinent began in June of 1991 in sales support and in 1993 was promoted to Product Manager of Long Distance. With the passage of the 1996 Telecommunications Act, I was part of the team that negotiated an agreement with Qwest (then USWest) to provide local exchange services in South Dakota. I managed the team that submitted orders and worked trouble calls. The fall of 1999 I managed the telephone customer service department and handled regulatory affairs responsibilities. In 2000 I became the Regulatory Affairs Manager.

## **II. TESTIMONY**

### **Q. WHAT ISSUES DOES THIS TESTIMONY ADDRESS?**

A. I will show that, as part of the Interconnection Agreement signed by Interstate Telecommunications Cooperative and Midcontinent Communications, Local Number Portability was negotiated and that the agreed upon negotiation never took place.

### **Q. DESCRIBE WHAT TOOK PLACE.**

A. Midcontinent Communications made a financial decision and commitment to bring competitive local exchange service to the community of Webster. On April 17, 2003, Midcontinent made application with the SD PUC to expand its Certificate of Authority to include the service territory of Webster, serviced by Interstate Telecommunications

Cooperative. At that same time, Midcontinent sent notice to ITC of the application to the PUC and a request for interconnection in the Webster exchange and to have a meeting within two weeks of the notice. That meeting took place on May 1, 2003 where a broad discussion was held on what services Midcontinent planned to provide, which included LNP.

The companies entered into negotiation on the interconnection agreement and after much discussion, the companies agreed that "The parties will negotiate in good faith the provision of number portability on a reciprocal basis under terms and conditions to be negotiated and added to this agreement by amendment, within six months from the date of this agreement."

The agreement was signed by ITC on November 3, 2003, and by Midcontinent on November 6, 2003. The SD PUC Commission approved the agreement on December 17, 2003.

On December 29, 2003, I sent an email message to Mr. Jerry Heiberger, general manager of ITC, requesting a date for the following week to discuss number porting. **Exhibit 1.**

Mr. Heiberger responded on January 8, 2004 stating that he had been busy with meetings and requested a meeting on Monday January 4<sup>th</sup>. I responded back that I assumed he meant January 12<sup>th</sup> and that Midcontinent would be available the morning of the 12<sup>th</sup>. **Exhibit 2.**

On January 12<sup>th</sup>, Mr. Heiberger called me stating that he still needed more time for research with his team to look into number portability. They needed to know specific details relating to details of execution and costs. He further stated that he would make it a higher priority with this people and get back in a week or so. I agreed to another short delay. **Exhibit 3.**

On January 28, 2004, Mr. Heiberger left me a voice mail message that he wanted to give me an update on the LNP issue. **Exhibit 4.**

On January 29, 2004, I returned Mr. Heiberger's call. We discussed a switch issue and he informed me of a board meeting coming up where LNP issues would be discussed. **Exhibit 5.**

On February 24, 2004, I sent an email to Mr. Heiberger asking for an update on his research progress, and requested a meeting. **Exhibit 6.**

On February 25, 2004, Mr. Heiberger responded that he was trying to establish another call with the appropriate personnel for that afternoon and would call once they have the issues finalized. **Exhibit 7.**

On March 3, 2004, I sent Mr. Heiberger another email requesting a meeting. **Exhibit 8.**

On March 4, 2004, Mr. Heiberger responded that ITC has determined to file a petition for suspension or modification of the LNP rules and requirements with the SD PUC. **Exhibit 9.**

**Q. ITC HAS CONTENDED THAT IT WAS NOT CLEAR THAT MIDCONTINENT WAS INTENT ON SCHEDULING A MEETING. WHAT IS YOUR RESPONSE?**

A. I had to initiate virtually all contacts in an effort to get the matter moving. I was under the distinct impression that Mr. Heiberger simply was delaying the process, and the context of his responses corroborates that conclusion. For example, the January 29<sup>th</sup> conversation referenced a board meeting at which LNP would be discussed, yet by February 24<sup>th</sup> Mr. Heiberger still had not contacted me, nor did he ever mention what happened at the board meeting.

**Q. WHY IS LNP IMPORTANT TO MIDCONTINENT IN THE WEBSTER EXCHANGE?**

A. Midcontinent cannot effectively compete against ITC without LNP. Customers tend to want to keep their telephone numbers. We have found that in other markets about 50% of the time customers request to keep their phone number in order to make the switch to a new carrier. Many of those are senior citizens who don't want to have to try and remember a new phone number and get it out to their family and friends. Midcontinent has received a number of requests from Webster customers for number portability. ) Remember, Midcontinent's entry into the Webster exchange is a competitive entry. ITC is offering cable service in competition to Midcontinent's long standing presence in the market, since 1974. Midcontinent believes ITC, as the incumbent carrier, is clearly violating both the spirit and the letter of the 1996 Act in impeding competition in this manner.

### III. SUMMARY

#### **PLEASE SUMMARIZE YOUR TESTIMONY.**

The time line of attempted negotiations on the part of Midcontinent clearly demonstrates the ample amount of notice and time for ITC to determine the method to provide LNP. The messages clearly demonstrate Midcontinent's desire and patience to negotiate terms discussed in the PUC approved Interconnection Agreement. The messages also clearly demonstrate a lack of interest on the part of ITC to negotiate in good faith the provision of number portability as agreed to in our Interconnection Agreement. Their decision to file a petition with the Commission for suspension under the Wireless Porting Order leads us to question whether they ever intended to negotiate in good faith, or simply view their petition for suspension as a way of relief from their previous commitment. In either case, ITC's agreement to negotiate in good faith for Wireline LNP should be upheld.

#### **DOES THIS CONCLUDE YOUR TESTIMONY?**

Yes, it does.

Mary,

I have been gone for the holidays and am trying to get caught up with board of director issues the past few days. Will you be available on Monday, January 4th. I will plan to call you sometime mid morning if this works for your schedule.

Thanks,

Jerry

## Exhibit 3

### ITC – LNP

Below are phone calls and/or voice mail message notes which are in addition to email messages:

Jerry had sent an email on January 8, 2004, in response to my email request for a meeting. Jerry suggested a meeting on Monday, January 4<sup>th</sup>. I replied on January 9<sup>th</sup> that I assumed he meant Monday, January 12<sup>th</sup>.

I received a phone call from Jerry on January 12<sup>th</sup>. Jerry said that he still needed to do some research with his team to look into it. They needed to know what it all will take to get it done and the costs. Jerry said he would make it a higher priority with this people and get back in a week or so

#### **Exhibit 4**

##### ITC – LNP

Below are phone calls and/or voice mail message notes which are in addition to email messages:

On January 28, 2004, Jerry Heiberger left me a voice mail message that he had an update on the LNP issue to give me.

#### **Exhibit 5**

##### ITC – LNP

Below are phone calls and/or voice mail message notes which are in addition to email messages:

January 29, 2004, I returned Jerry's call. I advised Jerry that our technical team had been trying to test the connectivity but had been running into some problems. We are being asked to turn up "00" for continuity test. We would like ITC to leave the circuits up so we can test on our own schedule and will then advise them of test completion. Jerry was unaware of any problems and did not know what "00" meant. Jerry would have their technical manager call Midcontinent's technical manager.

Still working on LNP.

To: mary\_lohnes@mimi.net  
Subject: LNP

Our e-mail server is back up so I thought I would try to send you this message again via e-mail.

Jerry

Good Morning Mary,

After two days of board meetings, I have finally returned to my office to update you on the status of the LNP issue. After analyzing the current rules, and both nonrecurring and recurring cost of deploying LNP, ITC has determined it is in its best interest to file a petition for suspension or modification of the LNP rules and requirements before the SD PUC next week.

Because I will be out of the office until mid-week, I anticipate the petition will be available late next week at the commission.

Jerry

Dear Dr. Haar:

In a filing made on May 10, 2004, on behalf of member companies of the Minnesota Independent Coalition (MIC), Winnebago Cooperative Telephone Association, Hills Telephone Company, Sioux Valley Telephone Company and Interstate Telecommunications Cooperative were identified as participating in the MIC Petition. These four companies were mistakenly included in the MIC filing, and should not be included as petitioners in that Docket. Rather, the Minnesota Public Utilities Commission has already acted on the individual petitions filed by each of the four companies under the additional Docket numbers referenced above.

Accordingly, please remove (or dismiss, as appropriate) Winnebago Cooperative Telephone Association, Hills Telephone Company, Sioux Valley Telephone Company, and Interstate

BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA

IN THE MATTER OF THE PETITION  
OF BROOKINGS MUNICIPAL UTILI-  
TIES d/b/a SWIFTEL COMMUNICA-  
TIONS FOR SUSPENSION OR MODI-  
FICATION OF § 251(b)(2) OF THE  
COMMUNICATIONS ACT OF 1934 AS  
AMENDED

Docket No. TC04-047

**DIRECT PRE-FILED TESTIMONY OF**

**W. JAMES ADKINS**

**May 14, 2004**

**DIRECT PRE-FILED TESTIMONY OF  
W. JAMES ADKINS**

1  
2  
3  
4 **Q: What is your name and address?**

5 A: My name is W. James Adkins. My business address is 415 4<sup>th</sup> Street, Brookings,  
6 South Dakota 57006. My business telephone number is 605-692-6211.

7 **Q: By whom are you employed and in what capacity?**

8 A: I am the Technical and Network Operations Manager of Brookings Municipal Utili-  
9 ties d/b/a Swiftel Communications. Swiftel Communications is a municipal inde-  
10 pendent local exchange carrier that provides local exchange, exchange access and  
11 other telecommunications services to 14,150 access lines, including an average of  
12 435 "lifeline" access lines within its South Dakota service area, which includes the  
13 exchange of City of Brookings.

14 **Q: Does your company have any direct points of interconnection with any wireless  
15 carrier and/or does your company provide any blocks of numbers for your  
16 company's rate centers to any wireless carrier?**

17 A: Our company has direct interconnection between our wireless business which is  
18 branded as Sprint PCS and our wireline switch. We do not provide any blocks of  
19 numbers from our company's wireline rate center to any wireless carrier.

20 **Q: How do the local calling areas of your exchanges compare with those of the  
21 wireless carriers operating in your area?**

22 A: We are a small company with only one exchange. Our service area is defined by  
23 the City limits of the City of Brookings, where we have physical cable plant. How-  
24 ever, the wireless carriers serve areas by the reach of a radio frequency transmission  
25 from a tower site. Their wireless local calling area is much larger than our ex-

1 change boundaries. The boundary of our wireline rate center and the local calling  
2 areas of wireless carriers serving in our area vary greatly.

3 **Q: Does your company provide any Extended Area Service (EAS) plans to its sub-**  
4 **scribers or to a connecting carrier's subscribers?**

5 A: Swiftel Communications provides the following EAS:

6 --Brookings City to the Interstate Telecommunications Cooperative Inc. ex-  
7 changes of Brookings Rural and Sinai.

8 --Brookings City to the Qwest exchange of Volga/Bruce

9 **Q: What is the current method of routing calls from your subscriber's landline**  
10 **phones to wireless phone numbers?**

11 A: There are two methods of routing wireline calls to wireless, dependent upon  
12 whether the wireless number is within our EAS calling area or not.

13 As an example, when a Swiftel wireline customer calls a wireless number that is lo-  
14 cal to our calling area, the call is routed over interconnection trunks, if a local  
15 Sprint PCS call, or over EAS if a local Verizon or Western Wireless call.

16 If the wireless number is not within our EAS calling area, when a subscriber located  
17 in Brookings uses his/her landline phone to call a wireless phone number, the call is  
18 routed from the subscriber's landline phone to the Swiftel Communications central  
19 office switch, where it is determined to be a non-local call and is therefore switched  
20 to a toll trunk group. The toll trunk carries the call to SDN Communication's  
21 (SDN) Centralized Equal Access (CEA) tandem, which is located in Sioux Falls, to  
22 be routed to the appropriate Point of Interconnection (POI) of the wireless carrier.

1 **Q: What is the number of wireless carriers authorized to serve in your company's**  
2 **service area?**

3 A: To my knowledge, eleven (11) Cellular, PCS and SMR wireless carriers are author-  
4 ized to serve City of Brookings d/b/a/ Swiftel Communication's service area, but  
5 only three (3) carriers are currently active in the market (Verizon Wireless, Western  
6 Wireless and Sprint PCS.). Additionally, we believe that Nextel is poised to pro-  
7 vide service to our service area as well and, as such, we have included Nextel in our  
8 analysis.

9 **Q: Have any subscribers requested local number portability (LNP) from your**  
10 **company?**

11 A: To my knowledge, not a single Swiftel Communications subscriber has requested  
12 local number portability.

13 **Q: Since the passage of the 1996 Telecom Act have any wireline carriers ever re-**  
14 **quested LNP from your compay?**

15 A: No.

16 **Q: Have any wireless carriers submitted bona fide requests for LNP and if so**  
17 **when?**

18 A. Yes. Western Wireless submitted a BFR on November 18, 2003, for Swiftel's host  
19 switch and one remote. Verizon submitted a BFR on January 23, 2004, for  
20 Swiftel's Host switch and two remotes.

21 **Q: Are there any existing capital investments for broadband that will be diverted**  
22 **if your company must deploy LNP?**

1 A: Yes. DSL and broadband services are of utmost importance to our customers. Of  
2 all our new services, our customers are most interested in broadband. We are up-  
3 grading our networks to provide broadband services. Any amount of capital in-  
4 vestment that is diverted to the implementation of LNP will reduce needed capital  
5 from broadband investments. Swiftel Communications is a small company and has  
6 limited resources to fund network investments. We would prefer to serve the real  
7 demands of our customers rather than provide a service that has been mandated by  
8 the FCC that our customers are not requesting.

9 **Q: What will the impact be on Swiftel Communications and its customers if it is**  
10 **required to provide wireless LNP?**

11 A: Swiftel Communications is a small municipal telephone company serving only the  
12 City of Brookings. Therefore, if LNP is required, the cost of implementing LNP  
13 will hit Swiftel and its customers hard. We have few economies of scale in imple-  
14 menting LNP. Exhibit 1 to our Petition shows a \$24 impact per access line. This is  
15 for a service that not a single customer has requested to date. There is little, if any,  
16 demand for LNP in our service area. With little demand there is a substantial bur-  
17 den to pay for the service. Further, the vast majority of our customers will have to  
18 pay for those few, if any, that may decide to port their numbers. It's a very poor  
19 bargain for the majority of our customers.

20 **Q: In your experience as the Operations Manager have you seen increases or ad-**  
21 **ditions to the itemized fees on your customer's telephone bills?**

22 A. Yes. Customers have expressed concern over the rate increases on their bills in re-  
23 cent years. Our customers look at the total amount due and do not differentiate be-

1           tween Swiftel charges and other fees. For many of our residential customers, the  
2           extra charges make up about 45% of their local telephone bill.

3   **Q: What do you expect your customer's reaction to be to any new LNP fees on**  
4   **their bills?**

5   A. The vast majority of our customers will gain no benefit from LNP service. I expect  
6   customers will not be very understanding of the LNP charges and will voice their  
7   protests. It will be difficult for us to provide an explanation of the LNP charges that  
8   our customers will find acceptable. Our Utility Board, which is comprised of citi-  
9   zens of Brookings and customers of Swiftel Communications, has been very sup-  
10   portive of our efforts to obtain a Suspension of the LNP rules.

11   **Q: Do you expect that the costs of implementing LNP could create the necessity of**  
12   **a rate increase for Swiftel Communications?**

13   A. Depending on what costs are recoverable in any LNP end user fees, if the remainder  
14   is significant, Swiftel Communications will not be able to absorb them and may  
15   have to implement a dial tone rate increase to recover any deployment costs.

16   **Q: Do you have any concluding comments?**

17   A. Since there are so many unknowns regarding LNP implementation in rural ex-  
18   changes, it makes sense to wait until these unknown issues are resolved, the cost is  
19   reduced, and customer demand develops. In operating our small telephone ex-  
20   change, we have learned that in the acquisition of new telecommunications features  
21   and functions, there is often substantial cost savings to be realized by not deploying  
22   during early phases of introduction. We have found that vendors, once the major  
23   sales have been made, will approach small telephone companies with discounts and

1 incentives to purchase a given feature or functionality. Similarly, when new tele-  
2 communication processes are introduced, we have found that it is much more cost  
3 effective, as well as less disruptive to our customers, if those processes are tested  
4 and deployed in larger markets first, then when proven in, migrated to small mar-  
5 kets such as ours. With LNP, there are so many unanswered questions it clearly  
6 makes sense to save our resources until these questions are answered. Doing so will  
7 save our customers significant dollars and help us provide services they actually  
8 want, such as broadband.

9 **Q: Do you believe that LNP is in the Public Interest?**

10 A: No!

11 **Q: Does this conclude your direct testimony?**

12 A: Yes. I also reserve the opportunity to revise or modify this pre-filed direct testi-  
13 mony at or before the hearing if I receive additional information pertaining to the  
14 issues I presented herein.

IN THE MATTER OF THE PETITION  
OF BROOKINGS MUNICIPAL UTILI-  
TIES d/b/a SWIFTEL COMMUNICA-  
TIONS FOR SUSPENSION OR MODI-  
FICATION OF § 251(b)(2) OF THE  
COMMUNICATIONS ACT OF 1934 AS  
AMENDED

Docket No. TC04-047  
REBUTTAL TESTIMONY OF  
W. JAMES ADKINS

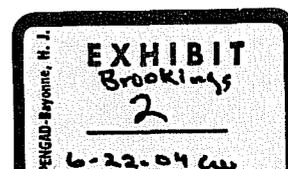

**REBUTTAL TESTIMONY OF**

**W. JAMES ADKINS**

**ON BEHALF OF**

**BROOKINGS MUNICIPAL UTILITIES d/b/a  
SWIFTEL COMMUNICATIONS**

**June 14, 2004**

1 Q. Please state your name, business name and address.

2 A. My name is W. James Adkins. I am the Technical and Network Operations Manager of  
3 Brookings Municipal Utilities d/b/a Swiftel Communications, whose address is 415 4<sup>th</sup>  
4 Street, Brookings, South Dakota, 57006.

5 Q. What is the purpose of your testimony?

6 A. I will provide rebuttal testimony to various statements made by Ron Williams in his  
7 testimony filed on May 28, 2004 on behalf of WWC License L.L.C. (Western Wireless).

8 Q. At page 6, lines 8-10, Mr. Williams alleges that the Petitioners “waited 4 months to seek  
9 a suspension of their LNP obligations, hopeful that this tactic would result in delay of  
10 their legal obligations.” How do you respond?

11 A. I dispute Mr. Williams’ characterization of events as baseless and inflammatory. Once  
12 the FCC made it clear that wireline carriers would be required to port numbers to wireless  
13 carriers in areas outside the top 100 MSAs by May 24, 2004, Swiftel took immediate  
14 steps to investigate the cost and the processes involved with LNP and to explore its legal  
15 options. Because Swiftel had little experience with LNP, it took time to gather the  
16 pertinent information, inform our Brookings Municipal Utility Board and for them to  
17 make the decision to seek a suspension of the requirement from the South Dakota Public  
18 Utilities Commission. Further, the suspension petition itself took time and effort to  
19 prepare because Swiftel wanted to present as complete a petition as possible with cost  
20 information as complete as possible.

21 Q. Do you agree with Mr. Williams’ statement at page 14, lines 19-22, in which he states  
22 that “LECs will need to route a call to a ported number to the serving tandem” and to Mr.

1 Williams' statement at page 15, lines 1-4 when he discusses the routing of allegedly  
2 "local calls?"

3 A. In its answer to Interrogatory 4., Western Wireless identifies the "serving tandem" as the  
4 Qwest LATA or local tandem, which is outside of Swiftel's service territory. (Western  
5 Wireless' responses to interrogatories are attached to the rebuttal testimony of Steven E.  
6 Watkins.) Therefore, Mr. Williams' statement is not consistent with Swiftel's current  
7 call routing practices, because it would require Swiftel to route calls to a point outside of  
8 its service territory, other than via an EAS arrangement, as local. I note that in its answer  
9 to Interrogatory 7., Western Wireless admits that there is no requirement for Swiftel to  
10 route calls to the Qwest tandem and currently, Swiftel does not do so. (See Western  
11 Wireless Response to Interrogatory 7 attached to the Rebuttal Testimony of Steven E.  
12 Watkins). Further, Western Wireless admits that its interconnection agreement with  
13 Swiftel does not require Swiftel to route calls to the Qwest tandem. Rather, calls that  
14 terminate outside of Swiftel's service territory, including calls to Western Wireless, other  
15 than via EAS arrangements, are routed to interexchange carriers for termination.  
16 Pursuant to the interconnection agreement, traffic terminating to Western Wireless is  
17 routed to either an interexchange carrier or Interstate Telecommunications Cooperative,  
18 Inc. (ITS) through an EAS arrangement. A diagram showing the current arrangements  
19 for routing traffic is attached hereto as Exhibit 1. Therefore, it appears that Western  
20 Wireless' argument really is a bad faith attempt to change the agreement between the  
21 parties.

22 Q. At page 19, lines 8-10, Mr. Williams states that it is his belief that "the FCC views that it  
23 is the originating carrier's responsibility to deliver local traffic for termination and that

1 the costs associated with fulfilling that responsibility are not a number portability cost.”

2 What is your response to this statement?

3 A. Mr. Williams’ statements are inconsistent and should be rejected. First he argues that  
4 Swiftel should be required to install new facilities to deliver ported calls to Western  
5 Wireless and other wireless carriers and then he argues that the cost of those facilities are  
6 not number portability costs. Further, as discussed above, Mr. Williams’ suggestion that  
7 it is Swiftel’s responsibility to deliver traffic destined to Western Wireless through a  
8 serving tandem is not consistent with the interconnection agreement between Swiftel and  
9 Western Wireless nor, as admitted by Western Wireless, is there any requirement for  
10 Swiftel to route traffic in this manner.

11 Q. Would Western Wireless’ routing proposal have impacts to Swiftel?

12 A. Yes. It is my understanding that Western Wireless’ proposal would increase Swiftel’s  
13 costs. First, Western Wireless’ proposal would require Swiftel to pay for new facilities  
14 to the tandem provider that it would not need for any purpose other than to route calls to  
15 ported numbers to wireless carriers. Second, Swiftel would most likely have to pay  
16 transit traffic charges to the tandem provider for transporting the traffic to the wireless  
17 carriers. Third, in response to Interrogatory 16.b. Western Wireless indicates that Swiftel  
18 would be required to pay reciprocal compensation on calls to ported numbers, even if  
19 Swiftel does not pay compensation on such calls today. (See Western Wireless Response  
20 to Interrogatory 16.b. attached to the Rebuttal Testimony of Steven E. Watkins).

21 Q. Is there any other impact?

22 A. Yes. Western Wireless’ proposal would create a regulatory arbitrage scenario that could  
23 lead to the loss of access revenues. Today, certain calls to wireless carriers are routed to

1 interexchange carriers. For example, if Swiftel customer A calls Western Wireless  
2 customer B with a 605-360 Western Wireless number, Swiftel customer A incurs a toll  
3 charge. However, under Western Wireless' proposal, it is my understanding that if  
4 Swiftel customer A calls customer B who now has a number ported from Swiftel, Swiftel  
5 customer A would be charged for a local call. Customers may be encouraged to "give  
6 up" their existing wireless numbers and obtain wireline numbers for the sole purpose of  
7 porting that number to avoid toll charges. This is not only a bad public policy result, but  
8 also simply a bad faith attempt to avoid an important contract provision upon which  
9 Western Wireless has already agreed with our company.

10 Q. Does this conclude your rebuttal testimony?

11 A. Yes.

CERTIFICATE OF SERVICE

The undersigned hereby certifies that she served a copy of the foregoing **REBUTTAL TESTIMONY** upon the persons herein next designated, on the date below shown, by depositing a copy thereof in the United States mail at Pierre, South Dakota, postage prepaid, in an envelope addressed to each said addressee, to-wit:

**Q: What is your name and address?**

A: My name is John M. De Witte. My business address is 1801 N. Main Street, Mitchell, South Dakota 57301.

**Q: By whom are you employed and in what capacity?**

A: I am the Vice President of Engineering of Vantage Point Solutions, Inc. (VPS). VPS is a telecommunications engineering and consulting firm in Mitchell, South Dakota with a full-time staff of 52 employees. Our client base of VPS is made up of rural independent Local Exchange Carriers (LECs). I focus on assisting the small LECs with nearly all technical and financial aspects of their operations. My direct staff of 13 and I have provided engineering, financial, and regulatory services to many of the South Dakota LECs, as well as LECs in several other states.

**Q: What is your educational and business background?**

A: I received a Bachelors of Science in Computer Engineering (1982) from Iowa State University (Ames, IA) and a Masters of Business Administration (1992) from Kennesaw Sate College (Kennesaw, GA). I am a Registered Professional Engineer in South Dakota and 10 other states.

I have been active in the telecommunications industry since 1983. Previous to VPS, I worked for Martin Group, Inc., based in Mitchell, South Dakota. At Martin Group, I was Assistant Director of Engineering of the Telecom Consulting and Engineering Business Unit, providing engineering and consulting services to rural telecommunications providers throughout the nation. Prior to this, I worked in a variety of engineering, marketing, and management positions at Nortel Networks,

1 Inc., a telecommunications equipment manufacturer in Raleigh, NC and Atlanta,  
2 GA. I am a regular speaker at many state, regional, and national telephone  
3 company organization events, including the National Telephone Cooperative  
4 Association (NTCA) and the Organization for the Promotion and Advancement of  
5 Small Telecommunications Companies (OPASTCO). In this capacity, I often  
6 advise telephone company managers and board members regarding a variety of  
7 technical and financial issues.

8 **Q: On whose behalf are you testifying in this proceeding?**

9 A: My direct pre-filed testimony is submitted on behalf of the City of Brookings  
10 Municipal Telephone Department d/b/a Swiftel Communications.

11 **Q: What is the purpose of your testimony?**

12 A: I will provide testimony on technical and cost issues of implementing LNP that is  
13 pertinent to this hearing.

14 **Q: Are you familiar with current telephone network technologies, including**  
15 **switching equipment, transmission equipment, and outside plant**  
16 **architectures?**

17 A: I have provided engineering and consulting services to more than 100 rural LECs  
18 across the United States. I am familiar with nearly all of the technologies and  
19 architectures of a rural LEC network, including transport equipment, switching  
20 equipment, digital loop carrier equipment, broadband networks, along with copper  
21 and fiber outside plant cable. I have engineered both landline networks and  
22 wireless networks for my clients.

1 **Q: Do you understand the various methods and requirements that are required to**  
2 **support Intramodal (wireline to wireline or wireless to wireless) and**  
3 **Intermodal (wireline to wireless) Local Number Portability?**

4 A: Yes I do.

5 **Q: With the number of variants for LNP, which implementation of LNP is the**  
6 **focus of your testimony?**

7 A: In general, the methodologies, rules, and implementation processes for wireline  
8 Intramodal LNP are clearly defined, have been in place for several years, and are  
9 widely deployed. The methodologies, rules, and implementation processes for  
10 Intermodal (wireline to wireless) LNP and wireless Intramodal have only been in  
11 place since November 2003. Intermodal LNP relating to wireline to wireless ports  
12 will be the focus of my direct testimony.

13 **Q: What unique challenges are presented to a rural Independent Local Exchange**  
14 **Carrier (ILEC) with the implementation requirements of Intermodal LNP?**

15 A: There are several technical and economic issues facing rural ILECs as they evaluate  
16 the implementation of Intermodal LNP. These challenges for the small rural LECs  
17 concern the interconnection of wireless and wireline networks for the purposes of  
18 implementing Intermodal LNP. The Petitioner does not have an existing direct  
19 point of connection to any of the CMRS carriers that have sent a Bona Fide Request  
20 (BFR) to the Petitioner for Intermodal LNP. If there are no direct points of  
21 connection with these wireless carriers, only conventional, switched toll routes  
22 remain; but no translating, routing, rating or cost recovery rules are in place. Some  
23 of the questions that need to be addressed include: (1) where and how should the

1 Petitioner interconnect with the wireless carriers, (2) is the point of interconnection  
2 within the LATA, and (3) how will the Petitioner be able to maintain the original  
3 rate center designation and rating when the number is ported to a point of  
4 interconnection that is located outside the original rate center, when the wireless  
5 service area and the Petitioner's service area vary greatly. These issues are unique  
6 in rural areas, such as the Petitioner's service area, where few, if any  
7 interconnection arrangements exist and there are fewer subscribers in comparison to  
8 metropolitan areas over which to spread the costs of Intermodal LNP. The  
9 uncertainty surrounding these and other questions are likely to cause significant  
10 customer confusion, complaints to the Petitioner and the SDPUC, and the resulting  
11 perception of degraded customer service on the part of the Petitioner's members.  
12 Swiftel Communications has not received a LNP request from a wireline  
13 competitive local exchange carrier (CLEC); therefore Swiftel Communications has  
14 not previously implemented LNP. As a result, numerous upgrades in software and  
15 operational procedures will be required in order to meet the Intermodal LNP  
16 requirements, which will benefit only those few subscribers that choose to leave  
17 Swiftel, while encumbering the entire remaining subscribers with the burden of  
18 funding the porting benefit. In addition, current implementation rules do not  
19 provide the necessary competitive playing field to allow wireless subscribers to port  
20 to Swiftel's wireline services.

21 **Q: What are the anticipated costs of implementing Intermodal LNP?**

22 A: The anticipated costs of implementing Intermodal LNP can be categorized into four  
23 (4) basic areas: 1) Switching related costs, 2) Number Portability Administration

1 Center (NPAC) related costs, 3) Administrative/Technical costs and 4) Transport  
2 Costs. The LNP Petition filed on behalf of Swiftel included an Exhibit detailing the  
3 estimated implementation costs for intermodal LNP. This Exhibit is attached as  
4 Exhibit [1]. Each of the cost elements in these categories will be identified in the  
5 following paragraphs.

#### 6 Switching Related Costs

7 The cost elements in this category include switching generic software upgrades,  
8 LNP software features, prerequisite software features to support the LNP features,  
9 any requisite switch hardware to support the operation of the LNP software, switch  
10 vendor installation costs, vendor software activation fees, and maintenance  
11 expenses attributable to LNP. As part of the cost estimates provided with the  
12 Swiftel Waiver Petition, the cost estimates for this category are detailed as follows:

#### 13 LNP Hardware Requirements

14 Swiftel Communications utilizes a Nortel Networks (Nortel) DMS-100 as its  
15 wireline switching platform. Swiftel has verified with Nortel that the existing  
16 DMS-100 configuration does not require any hardware additions to support the  
17 activation of LNP software. Therefore, Swiftel did not claim any non-recurring or  
18 recurring cost estimates for LNP hardware as part of its estimated costs.

#### 19 LNP Software Features

20 According to Nortel, the Swiftel DMS-100 currently has the generic software load  
21 that will support LNP. The LNP software features have not been activated in  
22 Swiftel's DMS-100. Based on information provided to Swiftel from Nortel, the  
23 non-recurring cost estimate for the LNP software features is \$187,000. Nortel does

1 not charge a recurring Right-To-Use (RTU) fee for these features. Based on the  
2 information provided by Nortel, Swiftel claimed \$187,000 for LNP software  
3 features and did not claim any recurring cost estimates for LNP software as part of  
4 its estimated costs.

5 Additional Software Features

6 Swiftel has verified with Nortel that the existing DMS-100 configuration does not  
7 require any pre-requisite software additions to support the activation of LNP  
8 software. Therefore, Swiftel did not claim any non-recurring or recurring cost  
9 estimates for additional LNP software as part of its estimated costs.

10 Additional Vendor Fees

11 Swiftel has verified with Nortel that the activation fees associated with the  
12 activation of the LNP Software Features are included with the planning pricing  
13 provided with the LNP Software Features. Therefore, Swiftel did not claim any  
14 non-recurring or recurring cost estimates for Additional Vendor Fees as part of its  
15 estimated costs.

16 Initial LNP Translations

17 There are several activities that are required to initially set up and test the basic  
18 translations for LNP. The non-recurring initial translations cost estimates were  
19 based on the anticipated fees to data-fill and test basic LNP functionality in the  
20 Petitioner's switching system. This testing includes coordination of testing with the  
21 SOA provider, coordination of testing with any transiting carriers, verification of  
22 proper LNP dip activities, verification of billing system interaction, and other  
23 translations activities. This cost estimate is approximately \$25,000. In order to

1 allow time for coordination of testing with other entities, it is assumed that the  
2 initial translations testing will require approximately four (4) man-weeks of  
3 translations activities by a 3<sup>rd</sup> party technical consultant at a loaded hourly rate of  
4 \$100 per hour. The remaining portion of this cost estimate includes travel, living  
5 and other miscellaneous expenses.

#### 6 Technical Implementation and Testing

7 There are several activities that are required to initially set up and test the basic  
8 translations for each CMRS carrier requesting Intermodal LNP. The non-recurring  
9 technical implementation and testing cost estimates were based on the anticipated  
10 fees to data-fill and test specific Intermodal LNP functionality in the Petitioner's  
11 switching system. The non-recurring technical implementation and testing cost  
12 estimates were based on performing number porting tests individually associated  
13 with each CMRS to ensure that the ported number route correctly flows through the  
14 Petitioner's network. As the FCC has not required a formal Interconnection  
15 Agreement, it is assumed that the Petitioner will be responsible for performing these  
16 tests in order to ensure proper call routing. This cost estimate was based on \$5,000  
17 for each CMRS Carrier. The cost estimate is based on 40 hours of testing at \$100  
18 per hour by a 3<sup>rd</sup> party resource including travel and living expenses.

#### 19 NPAC Related Costs

20 The cost elements in this category include Service Order Administration (SOA)  
21 costs, LNP Query costs, and connection costs with the LNP database. As part of  
22 the cost estimates provided with the Swiftel Waiver Petition, the cost estimates for  
23 this category are detailed as follows:

1        Service Order Administration

2        As part of the LNP implementation process, the Petitioner must select a provider to  
3        administer updates to the Number Portability Administration Center (NPAC) LNP  
4        database. In anticipation of reduced porting intervals in the future, the Petitioner  
5        has elected to include the costs for an automated SOA system. The SOA cost  
6        estimates were based a compilation of SOA services price lists from several firms  
7        providing automated SOA services. These cost estimates represent the anticipated  
8        start-up costs and recurring costs levied by the SOA provider to utilize its  
9        automated services to update the LNP databases. The sample pricing scenarios  
10       were obtained under Non Disclosure Agreement (NDA) from several SOA services  
11       providers. As the Petitioner has not entered into any contracts with these or any  
12       SOA entities, firm pricing cannot be provided. As an estimate, the non-recurring  
13       SOA costs were assumed to be \$2,000 with the recurring SOA costs assumed to be  
14       \$2,625. Should the Petitioner enter into a contract with an automated SOA  
15       provider, these cost estimates can be revised.

16       LNP Query Charges

17       With the implementation of LNP, the Petitioner will incur charges for each LNP  
18       query launched for its subscribers. The LNP query cost estimates were based on a  
19       compilation of SOA services price lists from several firms providing automated  
20       SOA services. The sample pricing scenarios were obtained under NDA from  
21       several SOA Services providers. As the Petitioner has not entered into any  
22       contracts with these or any SOA entities, firm pricing cannot be provided. The non-  
23       recurring LNP Query cost estimate represents the anticipated start-up costs levied

1 by the SOA provider to utilize its services to dip its database. This initial set-up  
2 charge is assumed to be \$1,000. The recurring LNP Query cost estimates were  
3 based on the assumption that each of the Petitioner's access lines would generate  
4 seven (7) to eight (8) call attempts per day; each of the call attempts would generate  
5 an LNP query. The query charge is assumed to range between \$0.001 and \$0.0005  
6 per query. Based on these assumptions, the recurring LNP Query charge was  
7 assumed to be \$2,500. Should the Petitioner enter into a contract with an automated  
8 SOA provider, these cost estimates can be revised.

9 Connection Costs w/LNP Database

10 With the implementation of LNP, the Petitioner will incur set-up charges levied by  
11 the SOA provider to enter its NECA Operating Company Number (OCN) and Point  
12 codes for each switch launching LNP queries to the SOA's LNP database. The  
13 non-recurring connection costs with LNP database estimate was based on a  
14 compilation of SOA services price lists from several firms providing automated  
15 SOA services. The sample pricing scenarios were obtained under NDA. As the  
16 Petitioner has not entered into any contracts with these or any SOA entities, firm  
17 pricing cannot be provided. The cost estimate for this element was estimated at  
18 \$600 assuming a maximum of four (4) point codes at \$150 per point code. Should  
19 the Petitioner enter into a contract with an automated SOA provider, this cost  
20 estimate can be revised.

21 Technical and Administrative Costs

22 The cost elements in this category include testing and verification of each ported  
23 DN, translations for each ported DN, administrative cost estimates, regulatory cost

1 estimates, customer care cost estimates, and marketing cost estimates. As part of  
2 the cost estimates provided with the Swiftel Waiver Petition, the cost estimates for  
3 this category are detailed as follows:

4 Testing and Verification of Each Ported Dial Number

5 This cost estimate addresses the anticipated activities to test each “ported out”  
6 directory number (DN) to verify the proper routing of the DN. The recurring  
7 Testing/Verification cost estimates were based on 1.25 hours per port at the  
8 Petitioner’s loaded technical labor costs of \$40 per hour.

9 Per Port Translations

10 This cost estimate addresses the anticipated translations activities to “port out” each  
11 DN. The recurring translations cost estimate was based on the Petitioner’s loaded  
12 technical labor costs of \$20 per port. The loaded dollar rate is based on Swiftel’s  
13 estimated loaded dollar rate of \$40 per hour.

14 Administrative Costs

15 The implementation of LNP will require Swiftel to implement new administrative  
16 policies and procedures. The non-recurring administrative cost estimates were  
17 based on providing LNP process training for the Petitioner’s administrative  
18 personnel. The training is assumed to be provided by the entity providing  
19 automated SOA services. The Petitioner has not selected a SOA provider at this  
20 time. The non-recurring costs estimates are based on a one-week onsite customer  
21 service representative training class, including the instructor’s travel and living  
22 expenses. This cost is assumed to be \$10,000. The recurring administrative cost  
23 estimate addresses the anticipated administrative activities required with entry of

1 the ported number into the SOA system. The recurring administrative cost  
2 estimates were based on the Petitioner's loaded administrative labor costs of \$25  
3 per port. The loaded dollar rate is based on Swiftel's estimated loaded dollar rate of  
4 \$40 per hour.

#### 5 Regulatory Costs

6 This cost element is associated with the Petitioner's Legal Fees and Regulatory  
7 Consulting fees. The legal fees are associated with the Petitioner's attorneys. The  
8 anticipated fees are associated with reviewing the legal aspects of LNP filings and  
9 LNP implementation. The regulatory consulting fees are typically associated with  
10 the updates required to various National databases (NECA Tariff 4, Telcordia  
11 LERG, etc.) and the possible assistance with the completion of the NECA End User  
12 Charge worksheets. This cost is estimated at 150 hours at an average rate of \$150  
13 per hour and includes \$2,500 in travel, living, and miscellaneous expenses. Based  
14 on the legal activities required to implement LNP, the Petitioner may revise this  
15 figure at a later date.

#### 16 Customer Care Costs

17 The implementation of LNP will require Swiftel to implement new customer care  
18 policies and procedures. The non-recurring customer care cost estimates were  
19 based on providing LNP customer care training for the Petitioner's administrative  
20 personnel. The training is assumed to be provided by the entity providing the  
21 Petitioner's billing platform services. The Petitioner has not developed the  
22 Customer Care and Billing processes for LNP at this time. The costs estimates are  
23 based on a one-week onsite Operational Support Services (OSS) training class. The

1 recurring customer care cost estimates were based on the loaded administrative  
2 labor costs of \$20 per port. The loaded dollar rate is based on Swiftel's estimated  
3 loaded dollar rate of \$40 per hour. This cost estimate addresses the anticipated  
4 administrative activities required with updating the Petitioner's customer care and  
5 billing system and to track the "ported out" DNs.

6 Marketing and Informational Flyer Cost Estimates

7 The implementation of LNP will likely generate subscriber confusion from the  
8 addition of an End User Charge for the implementation of LNP. The Petitioner  
9 plans to develop an informational flyer to help educate the subscriber base by  
10 explaining LNP and the reasons for the proposed LNP End User Charge appearing  
11 on the subscribers' monthly local service bill. The non-recurring marketing and  
12 informational flyer cost estimates were based on the costs required to develop an  
13 informational flyer and billing insert explaining LNP and any end-user fees that  
14 may apply. The total non-recurring estimated costs in this category were expressed  
15 as a "per access line cost" and were estimated at \$1.50 per subscriber. This cost  
16 estimate includes the development of the explanatory LNP text, the graphic design  
17 artwork, and first run printing costs. The recurring marketing and informational  
18 flyer cost estimates were based on \$2.50 per subscriber for volume print costs,  
19 handling, and mailing the periodic flyer/bill insert. This recurring  
20 marketing/informational flyer cost estimate was amortized over 12 months to arrive  
21 at an estimated monthly fee for the Cost Exhibit.

22

23

1        Billing/Customer Care Software Updates

2        The Petitioner's billing and customer care system will require software upgrades to  
3        support LNP. The non-recurring billing and customer care software upgrade cost  
4        estimates represents the anticipated costs to upgrade the Petitioner's billing system  
5        to accommodate LNP functionality. This upgrade was estimated as an allocated  
6        cost of the Petitioner's annual billing system upgrade

7        Transport-Related Cost Estimates

8        The cost elements in this category include the estimated costs of transport to  
9        connect the Petitioner's exchange with the CMRS carriers, anticipated cost  
10       estimates for transiting CMRS connections, and anticipated cost estimates for pass-  
11       through N-1 Tandem LNP queries. As part of the cost estimates provided with the  
12       Swiftel Waiver Petition, the cost estimates for this category are detailed as follows:

13       Transport Cost Estimates

14       The Petitioner will require direct Type 2B DS1 transport facilities from the  
15       Petitioner's exchange to each CMRS provider's Point of Interconnection (POI) for  
16       those CMRS carriers requesting intermodal LNP. The Petitioner does not possess  
17       POI information for each CMRS carrier. The non-recurring wireless carriers POI  
18       cost estimates represent the costs associated with providing a Type 2B DS1 span to  
19       each CMRS provider. As stated in the Petition, the Petitioner assumes  
20       interconnection will be required with four (4) CMRS carriers. The Petitioner  
21       estimates that the non-recurring transport costs for each CMRS will be  
22       approximately \$5,000. This cost estimate includes the switch DS1 interface  
23       hardware and supporting equipment required to place a DS1 span into service. The

1 recurring wireless carriers POI cost estimates were based on monthly transport lease  
2 cost estimates. As stated in the Petition, the Petitioner assumes interconnection will  
3 be required with four (4) CMRS carriers. One of the carriers is Sprint PCS. The  
4 recurring transport costs for Sprint PCS will be approximately \$400 per month.  
5 The recurring transport costs for the other CMRS carriers are estimated at \$800 per  
6 month. These cost estimates were based on oral estimates from SDN  
7 Communications assuming a POI in Brookings, SD for Sprint PCS and a POI in  
8 Sioux Falls, SD for the other CMRS carriers. These recurring transport cost  
9 estimates may be revised once POI information is provided by the CMRS carriers  
10 and firm pricing can be provided by a transport provider (such as SDN  
11 Communications or Qwest).

#### 12 Mobile Telephone Switching Office (MTSO) POI Connection Cost Estimates

13 The Petitioner does not possess POI information for the CMRS carriers that have  
14 provided a Bona Fide Request (BFR) to the Petitioner for intermodal LNP. The  
15 possibility exists that a transiting carrier (such as Qwest or SDN Communications)  
16 may establish Type 2B DS1 connections with one or more of the CMRS carriers.  
17 The MTSO POI connection cost estimates represent the anticipated costs for the  
18 Petitioner's share of this connection, if required. The non-recurring MTSO POI  
19 connection cost estimates were based on an estimate of the start-up costs to utilize a  
20 transiting carrier for CMRS MTSO connections, if required. The recurring MTSO  
21 POI connection cost estimates were based on the Petitioner's anticipated share of  
22 monthly lease for the transiting carrier MTSO POI connection cost estimates. If the  
23 CMRS carriers elect to directly connect with the Petitioner (without a transiting

1 carrier) on a direct Type 2B DS1 connection to the CMRS' Mobile Switching  
2 Telephone Office (MTSO), these cost estimates will likely be not applicable.

3 Transiting Non-Recurring Dip (Minimum) Cost Estimates

4 This cost estimate was based on the assumption that the transiting carrier may need  
5 to perform some LNP queries when the Petitioner's N-1 carrier fails to do so. The  
6 transiting non-recurring dip cost estimate describes the anticipated costs of the non-  
7 recurring set-up charges to enable the Petitioner to receive dip charges from a  
8 transiting carrier, such as SDN Communications. The initial setup charges are  
9 likely to be passed on to Petitioner. The transiting carrier recurring dip cost  
10 estimates describe the anticipated costs of the minimum dip charges from a  
11 transiting carrier. These charges are likely to be passed on to Petitioner. If the  
12 CMRS carriers elect to directly connect with the Petitioner (without a transiting  
13 carrier) on a direct Type 2B DS1 connection to the CMRS' Mobile Switching  
14 Telephone Office (MTSO), these cost estimates will likely be not applicable.

15 **Q: It appears that one of the larger estimated costs projected for the**  
16 **implementation of Intermodal LNP relates to transport costs. What**  
17 **considerations concerning compensation for transport costs are applicable to**  
18 **the implementation of Intermodal LNP?**

19 **A:** With regard to the direct Type 2B connections to the wireless carriers described in  
20 the preceding cost estimates, these cost estimates are identified as required  
21 connections to allow Intermodal LNP to function correctly within the Petitioner's  
22 existing billing and customer care systems.

1 **Q: If no direct Type 2B DS1 facilities are available for interconnection with the**  
2 **CMRS carriers, what happens for Swiftel?**

3 A: Without direct Type 2B facilities, the ported calls will be routed based on the Local  
4 Routing Number (LRN) delivered with the LNP query. The LRN will contain the  
5 NPA-NXX of the wireless carrier. Based on this NPA-NXX, these calls will be  
6 routed as toll calls over Swiftel's existing toll routes to Swiftel's Access Tandem  
7 (SDN Communications).

8 **Q: In your opinion, are the proposed Type 2B DS1 facilities to each CMRS carrier**  
9 **cost justified?**

10 A: Without actual traffic data, it is impossible to determine the feasibility of a  
11 particular facility. However, based on the anticipated traffic levels generated by the  
12 projected intermodal LNP ports, it appears that the construction of these facilities is  
13 not cost-justified. If the facilities were feasible, it is likely that the wireless carriers  
14 would have implemented them already as they have in other areas. Based on the  
15 projected traffic levels, it appears that the direct facilities between Petitioner and the  
16 wireless carriers required for LNP would be highly under-utilized and very  
17 inefficient.

18 **Q: It appears that some of the anticipated cost estimates are based on the quantity**  
19 **of anticipated numbers that would be ported to a CMRS carrier. How was the**  
20 **number of ports determined?**

21 A: The quantity of projected ports is a function of the competitive environment in the  
22 proposed service area, the number of CMRS carriers, and other statistical data.  
23 The data that is currently available concerning porting activity for CMRS carriers

1 on a wide-scale basis is limited. It is my understanding that no Petitioner  
2 customer has ever made an inquiry to Petitioner regarding LNP or a request for  
3 LNP. With respect to wireless LNP nationwide, to date, the demand for wireless  
4 porting has been far less than expected and most ports have been from one  
5 wireless carrier to another. Wireline to wireless porting appears to be a small  
6 fraction of wireless porting in general.<sup>1</sup> According to NeuStar, 95% of wireless  
7 ports have been from one wireless carrier to another and only 5% of wireless ports  
8 were between wireline and wireless carriers.<sup>2</sup> With the rural nature of the  
9 Petitioner's service area and the competitive environment with respect to  
10 coverage of the Petitioner's existing service area by the existing wireless carriers,  
11 I believe that the percentage would be even smaller than in other more urban parts  
12 of the nation. For purposes of the cost exhibit, approximately four (4) intermodal  
13 ports per month were estimated,<sup>3</sup> which is well under five (5) percent of  
14 Petitioner's access lines. Accordingly, there appears to be little, if any, demand  
15 for LNP and, absent such demand, no public benefit will be derived from LNP.  
16 Even if some level of LNP demand develops in the future, the total  
17 implementation costs that would be incurred by Petitioner to implement and  
18 maintain LNP would require re-evaluation based on the customer demand,  
19 quantity of ports, and the revised estimated costs for the required LNP  
20 infrastructure elements.

---

<sup>1</sup> See "Survey Finds Little Impact From LNP", *RCR Wireless News*, February 9, 2004 ed., reporting that according to a consumer survey report from CFM Direct, very few telecommunications customers have switched their wireline phone numbers to wireless.

<sup>2</sup> See NARUC Notebook, *Communications Daily*, Vol. 24, No. 46, p. 4 (March 9, 2004)

<sup>3</sup> While actual industry figures are not available, most wireless carriers are currently experiencing a porting rate of between three percent (3%) and six percent (6%). Of these ports, it is estimated that between one percent (1%) and three percent (3%) are intermodal.

1 **Q: Will any of the Petitioner's estimated costs change if the number of estimated**  
2 **ports is changed?**

3 A: Yes. There are several of the estimated recurring costs that are driven by the  
4 number of ports. These cost elements include the recurring translations costs, the  
5 recurring testing and verification of each ported number, the recurring  
6 administrative cost estimates, and the recurring customer care costs. If the  
7 projected number of ports increases, these costs will increase. If the number of  
8 projected ports decreases, these costs will decrease.

9 **Q: The current porting interval is currently four (4) days. If the porting interval**  
10 **were shortened to two (2) days or less, what effect, if any, would this shortened**  
11 **interval have on the estimated costs?**

12 A: The current industry experience with Intermodal porting is has not been without  
13 implementation issues. Significant problems meeting the current four (4) day  
14 porting interval have been reported. Assuming that the implementation issues are  
15 refined to the point where a shorter porting interval can be supported, the Petitioner  
16 has included the known cost elements to support a shorter porting interval. The  
17 Petitioner has assumed the use of an automated SOA system as part of their  
18 anticipated LNP implementation costs. An automated SOA system will allow the  
19 Petitioner to accommodate an electronic request and acknowledgement for the  
20 ported numbers. Therefore, the Petitioner does not anticipate any increases in its  
21 SOA related non-recurring or recurring cost estimates. It is possible that additional  
22 recurring costs in the areas of translations, technical implementation, testing,  
23 verification, customer care, and administrative would occur if the porting interval

1 were to be reduced to require that porting activities occur outside of the standard  
2 business day (expedited requests, nights, weekends, and holidays). If porting is  
3 required during these times, additional loaded labor rates will be incurred. If the  
4 porting requirements are confined to the standard business day, the Petitioner does  
5 not anticipate any additional recurring LNP costs. However, it is possible that  
6 unforeseen requirements could require additional charges.

7 **Q: Are there any other potential costs that could impact Swiftel with the**  
8 **implementation of Intermodal LNP?**

9 A: If Swiftel must implement intermodal LNP, all carriers with EAS arrangements  
10 with Swiftel and their customers will be impacted because the other carrier will  
11 have to LNP dip all EAS calls. This would increase the cost of EAS between  
12 Swiftel and the other carrier and could result in a loss of EAS options to the  
13 customer or an increase in the cost of optional EAS service.

14 **Q: Some telecommunications industry analysts have suggested that Foreign**  
15 **Exchange Service (FX) could be used to provide connections to accommodate**  
16 **intermodal LNP. Is this a reasonable alternative?**

17 A: There have been industry discussions of using an FX service for Intermodal LNP  
18 interconnection. An FX service is a line appearance that is extended from the  
19 "home" exchange to a "foreign" exchange using dedicated point-to-point facilities.  
20 The FX service is engineered on a per line basis. It is not a common trunk that can  
21 be used by a carrier for routing purposes. With an FX service, the LEC has  
22 customers and facilities in one rate center and provides service to customers in  
23 another rate center using the same "home" number block. To do this, facilities are

1 extended from the LEC rate center to the foreign rate center where the customer  
2 resides. It is important to note that the customer pays for the use of these facilities.  
3 The LEC is compensated for their facilities and lost toll revenue through these  
4 customer charges. It is unknown exactly how an ILEC would implement an FX  
5 service to accommodate Intermodal LNP. The exact connectivity, rate elements,  
6 and network configuration for the proposed Intermodal LNP FX service appear to  
7 be undefined. As such, any discussion of using FX as a viable transport alternative  
8 for Intermodal LNP transport is purely speculation.

9 **Q: You have addressed several estimated costs for Intermodal LNP. How would**  
10 **these cost estimates change if Petitioner must implement only Intramodal**  
11 **(wireline to wireline) LNP?**

12 **A:** All cost elements would stay the same but amount of the cost estimates could  
13 change. It is my understanding that both wireline providers would be in the same  
14 rate center. Accordingly, the primary change in the estimated costs would be in the  
15 area of transport costs. The petitioner estimates that these costs would likely be  
16 significantly reduced. Intramodal LNP has clearly defined processes for the  
17 exchange of traffic between the respective wireline carriers competing in a clearly  
18 defined rate center. In the intramodal LNP cases with which I am familiar the  
19 carriers have entered into an Interconnection Agreement. The Intramodal  
20 Interconnection Agreement addresses the methods and compensation that will be  
21 used to establish interconnection and exchange traffic between the wireline carriers.  
22 The compensation for the traffic volumes is typically in the form of reciprocal  
23 compensation. In addition, the recurring costs for testing of each ported number

1 would likely be reduced since the dialing plans and routing between the carriers will  
2 likely not change on a regular basis. The reduction of these costs is dependent upon  
3 the volume of ports. The remaining costs will likely be unchanged.

4 **Q: What would be the timeframe required for the Petitioner to fully implement,**  
5 **test and place Intermodal LNP into commercial service, if required to do so?**

6 A: Please refer to the LNP Implementation Timeline, attached hereto as Exhibit [2].

7 The Timeline details the individual, inter-dependent tasks necessary to fully  
8 implement Intermodal LNP. They are arrayed in a self-explanatory fashion,  
9 showing the anticipated duration of each task and its relationship to other tasks.

10 The overall duration that results for the Timeline supports that approximately six  
11 (6) months would be required to fully prepare for, implement, test and place  
12 Intermodal LNP into commercial service, as stated in the Swiftel Waiver Petition.

13 As with any planning horizon, this timeline does not take into account holidays or  
14 other unforeseen delays due to Force Majure.

15 **Q: Does this conclude your direct testimony?**

16 A: Yes. I also reserve the opportunity to revise or modify this pre-filed direct  
17 testimony at or before the hearing if I receive additional information pertaining to  
18 the issues I presented herein.

BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA

IN THE MATTER OF THE PETITION  
OF STOCKHOLM-STRANDBURG  
TELEPHONE COMPANY FOR SUS-  
PENSION OR MODIFICATION OF  
§ 251(b)(2) OF THE COMMUNICA-  
TIONS ACT OF 1934 AS AMENDED

Docket No. TC04-062

DIRECT PRE-FILED TESTIMONY OF  
MARJORIE NOWICK

May 14, 2004

1  
2  
3  
4 **DIRECT PRE-FILED TESTIMONY OF  
MARJORIE NOWICK**

4 **Q: What is your name and address?**

5 A: My name is Marjorie Nowick. My business address is P. O. Box 20, Stockholm,  
6 SD 57264-0020. My business telephone number is (605) 676-2311.

7 **Q: By whom are you employed and in what capacity?**

8 A: I am one of the owners and the Office Manager of Stockholm-Strandburg  
9 Telephone Company (SSTC). SSTC is a rural independent local exchange carrier  
10 that provides local exchange, exchange access and other telecommunications  
11 services to 714 access lines within its South Dakota service area, which includes the  
12 exchanges of Stockholm, Reville, and South Shore.

13 **Q: Does your company have any direct points of interconnection with any wireless  
14 carrier and/or does your company provide any blocks of numbers for your  
15 company's rate centers to any wireless carrier?**

16 A: No.

17 **Q: How do the local calling areas of your exchanges compare with those of the  
18 wireless carriers operating in your area?**

19 A: We are a small company with only three exchanges. Our service areas are defined  
20 by where we have physical cable plant. However, the wireless carriers serve by the  
21 reach of a radio frequency from a tower site. Their wireless local calling area is  
22 often much larger than our exchange boundaries. The boundaries of our wire/rate  
23 centers and the local calling areas of wireless carriers serving in our area vary  
24 greatly.

1 **Q: Does your company provide any Extended Area Service (EAS) plans to its**  
2 **subscribers or to a connecting carrier's subscribers?**

3 A: SSTC provides the following EAS:

4 Stockholm subscribers (605-676) have EAS to Milbank (605-432).

5 Reville subscribers (605-623) have EAS to Milbank (605-432).

6 South Shore subscribers (605-756) have EAS to Watertown (605-882, 605-884,  
7 605-886, 605-881).

8 **Q: What is the current method of routing calls from your subscriber's landline**  
9 **phones to wireless phone numbers?**

10 A: As an example, when a subscriber located in Stockholm uses his/her landline phone  
11 to call a wireless phone number, the call is routed from the subscriber's landline  
12 phone to the Stockholm central office switch, where it is determined to be a non-  
13 local call and is therefore switched to a toll trunk group. The toll trunk carries the  
14 call to SDN Communication's (SDN) Centralized Equal Access (CEA) tandem,  
15 which is located in Sioux Falls, to be routed to the appropriate Point of  
16 Interconnection (POI) of the wireless carrier.

17 **Q: What is the number of wireless carriers authorized to serve in your company's**  
18 **service area?**

19 A: To my knowledge, five (5) wireless carriers are authorized to serve in SSTC's  
20 service area (Verizon Wireless, Western Wireless, Sprint PCS, Nextel, and RCC  
21 Minnesota Inc.).

22 **Q: Have any subscribers requested local number portability (LNP) from your**  
23 **company?**

1 A: To my knowledge, not a single SSTC subscriber has requested local number  
2 portability from SSTC. Further, there was considerable press and TV coverage in  
3 our service area about this issue when the FCC first issued its November 10 Order.

4 **Q: Since the passage of the 1996 Telecom Act have any wireline carriers ever**  
5 **requested LNP from your compay?**

6 A: No.

7 **Q: Have any wireless carriers submitted bona fide requests for LNP and if so**  
8 **when?**

9 A: Yes. Western Wireless (December 2003) and RCC Minnesota, Inc. & Wireless  
10 Alliance, d/b/a Unicell (April 2004).

11 **Q: Are there any existing capital investments for broadband that will be diverted**  
12 **if your company must deploy LNP?**

13 A: Yes. DSL and broadband services are of utmost importance to our customers. Of  
14 all our new services, our customers are most interested in broadband. We are  
15 upgrading our networks to provide broadband services. Any amount of capital  
16 investment that is diverted to the implementation of LNP will reduce needed capital  
17 from broadband investments. SSTC is a small company and has limited resources  
18 to fund network investments. We would prefer to serve the real demands of our  
19 customers rather than provide a service that has been mandated by the FCC that our  
20 customers are not requesting.

21 **Q: What will the impact be on SSTC and its customers if it is required to provide**  
22 **wireless LNP?**

1 A: SSCT is a small rural company with a small customer base. Therefore, if WLNP is  
2 required, the cost of implementing WLNP will hit SSCT and its customers very  
3 hard. We have few economies of scale in implementing WLNP. Exhibit 1 to our  
4 Petition showed a \$16 impact per access line. However, the exhibit has since been  
5 revised to reflect an additional CMRS provider in the area, among other items.  
6 Therefore, the revised Exhibit 1 now shows a \$24 impact per access line. This is  
7 for a service that not a single customer has requested to date. There is little, if any,  
8 demand for WLNP in our service area. With little or no demand, there would be a  
9 substantial burden to pay for the service. Further, the vast majority of our  
10 customers will have to pay for those few, if any, who may decide to port their  
11 numbers. It's a very poor bargain for the majority of our customers.

12 **Q: In your experience as the office manager of SSTC, have you seen increases or**  
13 **additions to the itemized fees on your customer's telephone bills?**

14 A. Yes. Most customers tell me there have been too many new fees or fee increases on  
15 their bills in recent years. We received a considerable number of protests from  
16 customers when the subscriber line charge (SLC) went from \$3.50 to \$6.50 after the  
17 MAG Plan was approved by the FCC.

18 **Q: What do you expect your customer's reaction to be to any new LNP fees on**  
19 **their bills?**

20 A. If it is anything close to \$24 per month, the reaction would be very hostile. The  
21 vast majority of our customers would gain no benefit from this service, and I would  
22 expect strong protests. The protests will be far worse than those to the SLC  
23 increase. Many of our customers are elderly. They will be especially hard hit.

1 **Q: Do you expect that the costs of implementing WLNP could create the necessity**  
2 **of a rate increase for SSTC?**

3 A. Depending on what costs are recoverable in any LNP end user fees, if the remainder  
4 is significant, SSTC will not be able to absorb them and may have to implement a  
5 dial tone rate increase to recover any deployment costs.

6 **Q: Do you have any concluding comments?**

7 A. There are so many unknowns regarding WLNP implementation in rural exchanges.  
8 It makes much more sense to wait for the FCC or Courts to clarify key issues, such  
9 as: 1) How are rural ILECS to interconnect with distant wireless POI? 2) What will  
10 the porting interval be? and 3) If a number is ported, how would ILECs maintain  
11 the original wireline rate center when the service areas of wireline and wireless  
12 companies vary so greatly? There are so many unanswered questions it clearly  
13 makes sense to save our resources until these questions are answered. Doing so will  
14 save our customers significant dollars and help us provide services they actually  
15 want such as broadband.

16 **Q: Does this conclude your direct testimony?**

17 A: Yes. I also reserve the opportunity to revise or modify this pre-filed direct  
18 testimony at or before the hearing if I receive additional information pertaining to  
19 the issues I presented herein.

IN THE MATTER OF THE PETITION  
OF STOCKHOLM-STRANDBURG  
TELEPHONE COMPANY FOR SUS-  
PENSION OR MODIFICATION OF  
§ 251(b)(2) OF THE COMMUNICA-  
TIONS ACT OF 1934 AS AMENDED

Docket No. TC04-062  
REBUTTAL TESTIMONY OF  
MARGE NOWICK

---

REBUTTAL TESTIMONY OF  
MARGE NOWICK  
ON BEHALF OF  
STOCKHOLM-STRANDBURG TELEPHONE COMPANY

June 14, 2004

1 Q. Please state your name, business name and address.

2 A. **My name is Marjorie Nowick. I am the General Manager of Stockholm-Strandburg**  
3 **Telephone Company (“Stockholm-Strandburg”), whose address is 201 North Main**  
4 **Street, Stockholm, South Dakota 57264.**

5 Q. What is the purpose of your testimony?

6 A. **I will provide rebuttal testimony to various statements made by Ron Williams in his**  
7 **testimony filed on May 28, 2004 on behalf of WWC License L.L.C. (Western Wire-**  
8 **less).**

9 Q. At page 6, lines 8-10, Mr. Williams alleges that the Petitioners “waited 4 months to seek  
10 a suspension of their LNP obligations, hopeful that this tactic would result in delay of  
11 their legal obligations.” How do you respond?

12 A. **I dispute Mr. Williams’ characterization of events as baseless and inflammatory.**  
13 **Once the FCC made it clear that wireline carriers would be required to port num-**  
14 **bers to wireless carriers in areas outside the top 100 MSAs by May 24, 2004, Stock-**  
15 **holm-Strandburg took immediate steps to investigate the cost and the processes in-**  
16 **volved with LNP and to explore its legal options. Because Stockholm-Strandburg**  
17 **had no experience with LNP, it took time to gather the pertinent information and to**  
18 **make the decision to seek a suspension of the requirement from the Commission.**  
19 **Further, the suspension petition itself took time and effort to prepare because**  
20 **Stockholm-Strandburg wanted to present as complete a petition as possible, accom-**  
21 **panied by cost information as complete as possible.**

22 Q. Do you agree with Mr. Williams’ statement at page 14, lines 19-22, in which he states  
23 that “LECs will need to route a call to a ported number to the serving tandem” and to Mr.

1 Williams' statement at page 15, lines 1-4 when he discusses the routing of allegedly "lo-  
2 cal calls?"

3 **A. I believe that Mr. Williams' statement is not consistent with the interconnection**  
4 **agreement signed by Stockholm-Strandburg and Western Wireless. Pursuant to**  
5 **that agreement, Stockholm-Strandburg did not agree to route traffic destined for**  
6 **Western Wireless to the serving tandem. Rather, traffic terminating to Western**  
7 **Wireless is routed to an interexchange carrier. Therefore, it appears that Western**  
8 **Wireless' argument really is a bad faith attempt to change the agreement between**  
9 **the parties.**

10 **Q. At page 19, lines 8-10, Mr. Williams states that it is his belief that "the FCC views that it**  
11 **is the originating carrier's responsibility to deliver local traffic for termination and that**  
12 **the costs associated with fulfilling that responsibility are not a number portability cost."**  
13 **What is your response to this statement?**

14 **A. Mr. Williams' statements are inconsistent and should be rejected. First he argues**  
15 **that Stockholm-Strandburg should be required to install new facilities to deliver**  
16 **ported calls to Western Wireless and then he argues that the cost of those facilities**  
17 **are not number portability costs. Further, as discussed at lines 3-9 above, Mr. Wil-**  
18 **liams' suggestion that it is Stockholm-Strandburg's responsibility to deliver traffic**  
19 **destined to Western Wireless through a serving tandem is not consistent with the in-**  
20 **terconnection agreement between Stockholm-Strandburg and Western Wireless.**

21 **Q. At page 20, lines 13-16, Mr. Williams states that "[t]he routing methods proposed by the**  
22 **Petitioners are inefficient in that they make little or no utilization of existing equipment**

1 and shared facilities currently used to exchange calls with other carriers.” How do you  
2 respond?

3 A. The routing methods reflected in the cost exhibit attached to Stockholm-  
4 Strandburg’s Petition are based on the current routing arrangements that Stock-  
5 holm-Strandburg has in place with other carriers namely, calls that are dialed on a  
6 local 7-digit basis are routed via direct connections. Therefore, if calls to numbers  
7 ported to a carrier are to be dialed on a local 7-digit basis, a direct connection needs  
8 to be established between the carriers.

9 Q. Would Western Wireless’ routing proposal have impacts to Stockholm-Strandburg be-  
10 yond LNP?

11 A. Yes. It is my understanding that Western Wireless’ proposal would increase Stock-  
12 holm-Strandburg’s costs. First, Western Wireless’ proposal would require Stock-  
13 holm-Strandburg to pay for new facilities to the tandem provider that it does not  
14 need for any purpose other than to route calls to ported numbers to wireless carri-  
15 ers. Second, Stockholm-Strandburg would most likely have to pay transit traffic  
16 charges to the tandem provider for transporting the traffic to the wireless carriers.

17 Q. Is there any other impact?

18 A. Yes. It appears that Western Wireless’ proposal would create a regulatory arbi-  
19 trage scenario that could lead to the loss of access revenues. Today, certain calls to  
20 wireless carriers are routed to interexchange carriers. For example, if Stockholm-  
21 Strandburg Customer A calls Western Wireless Customer B, Stockholm-  
22 Strandburg Customer A incurs a toll charge. However, under Western Wireless’  
23 proposal, it is my understanding that if Stockholm-Strandburg Customer A calls

1 Western Wireless Customer B who now has a number ported from Stockholm-  
2 Strandburg, Stockholm-Strandburg Customer A would be charged for a local call.  
3 Customers may be encouraged to "give up" their existing wireless numbers and ob-  
4 tain wireline numbers for the sole purpose of porting that number to avoid toll  
5 charges. This is not only a bad public policy result, but also simply a bad faith at-  
6 tempt to avoid an important contract provision upon which Western has already  
7 agreed with our company.

8 Q. Does this conclude your rebuttal testimony?

9 A. Yes.

**CERTIFICATE OF SERVICE**

The undersigned hereby certifies that she served a copy of the foregoing **REBUTTAL TESTIMONY** upon the persons herein next designated, on the date below shown, by depositing a copy thereof in the United States mail at Pierre, South Dakota, postage prepaid, in an envelope addressed to each said addressee, to-wit:

**Q: What is your name and address?**

A: My name is John M. De Witte. My business address is 1801 N. Main Street, Mitchell, South Dakota 57301.

**Q: By whom are you employed and in what capacity?**

A: I am the Vice President of Engineering of Vantage Point Solutions, Inc. (VPS). VPS is a telecommunications engineering and consulting firm in Mitchell, South Dakota with a full-time staff of 52 employees. Our client base of VPS is made up of rural independent Local Exchange Carriers (LECs). I focus on assisting the small LECs with nearly all technical and financial aspects of their operations. My direct staff of 13 and I have provided engineering, financial, and regulatory services to many of the South Dakota LECs, as well as LECs in several other states.

**Q: What is your educational and business background?**

A: I received a Bachelors of Science in Computer Engineering (1982) from Iowa State University (Ames, IA) and a Masters of Business Administration (1992) from Kennesaw Sate College (Kennesaw, GA). I am a Registered Professional Engineer in South Dakota and 10 other states.

I have been active in the telecommunications industry since 1983. Previous to VPS, I worked for Martin Group, Inc., based in Mitchell, South Dakota. At Martin Group, I was Assistant Director of Engineering of the Telecom Consulting and Engineering Business Unit, providing engineering and consulting services to rural telecommunications providers throughout the nation. Prior to this, I worked in a variety of engineering, marketing, and management positions at Nortel Networks,

1 Inc., a telecommunications equipment manufacturer in Raleigh, NC and Atlanta,  
2 GA. I am a regular speaker at many state, regional, and national telephone  
3 company organization events, including the National Telephone Cooperative  
4 Association (NTCA) and the Organization for the Promotion and Advancement of  
5 Small Telecommunications Companies (OPASTCO). In this capacity, I often  
6 advise telephone company managers and board members regarding a variety of  
7 technical and financial issues.

8 **Q: On whose behalf are you testifying in this proceeding?**

9 A: My direct pre-filed testimony is submitted on behalf of Stockholm-Strandburg  
10 Telephone Company (SSTC).

11 **Q: What is the purpose of your testimony?**

12 A: I will provide testimony on technical and cost issues of implementing LNP that is  
13 pertinent to this hearing.

14 **Q: Are you familiar with current telephone network technologies, including  
15 switching equipment, transmission equipment, and outside plant  
16 architectures?**

17 A: I have provided engineering and consulting services to more than 100 rural LECs  
18 across the United States. I am familiar with nearly all of the technologies and  
19 architectures of a rural LEC network, including transport equipment, switching  
20 equipment, digital loop carrier equipment, broadband networks, along with copper  
21 and fiber outside plant cable. I have engineered both landline networks and  
22 wireless networks for my clients.

1 **Q: Do you understand the various methods and requirements that are required to**  
2 **support Intramodal (wireline to wireline or wireless to wireless) and**  
3 **Intermodal (wireline to wireless) Local Number Portability?**

4 A: Yes I do.

5 **Q: With the number of variants for LNP, which implementation of LNP is the**  
6 **focus of your testimony?**

7 A: In general, the methodologies, rules, and implementation processes for wireline  
8 Intramodal LNP are clearly defined, and been in place for several years, and are  
9 widely deployed. The methodologies, rules, and implementation processes for  
10 Intermodal (wireline to wireless) LNP and wireless Intramodal LNP have only been  
11 in place since November 2003. Intermodal LNP relating to wireline to wireless  
12 ports will be the focus of my direct testimony.

13 **Q: What unique challenges are presented to a rural Independent Local Exchange**  
14 **Carrier (ILEC) with the implementation requirements of Intermodal LNP?**

15 A: There are several technical and economic issues facing rural ILECs as they evaluate  
16 the implementation of Intermodal LNP. The challenges for the small rural LECs  
17 concern the interconnection of wireless and wireline networks for the purposes of  
18 implementing Intermodal LNP. The Petitioner does not have existing direct points  
19 of connection to wireless carriers' networks in any of the rate centers it serves.  
20 Where there are no direct points of connection with the wireless carriers, only  
21 conventional, switched toll routes remain; but no translating, routing, rating or cost  
22 recovery rules are in place. Some of the questions that need to be addressed  
23 include: (1) where and how should the Petitioner interconnect with the wireless

1 carriers, (2) is the point of interconnection within the LATA, and (3) how will the  
2 Petitioner be able to maintain the original rate center designation and rating when  
3 the number is ported to a point of interconnection that is located outside the original  
4 rate center, when the wireless service area and the Petitioner's service area vary  
5 greatly. These issues are unique in rural areas, such as the Petitioner's service area,  
6 where few, if any interconnection arrangements exist and there are fewer  
7 subscribers in comparison to metropolitan areas over which to spread the costs of  
8 Intermodal LNP. The uncertainty surrounding these and other questions are likely  
9 to cause significant customer confusion, complaints to the Petitioner and the  
10 SDPUC, and the resulting perception of degraded customer service on the part of  
11 the Petitioner's members. SSTC has not received a LNP request from a wireline  
12 competitive local exchange carrier (CLEC); therefore SSTC has not previously  
13 implemented LNP. As a result, numerous upgrades in software and operational  
14 procedures will be required in order to meet the Intermodal LNP requirements,  
15 which will benefit only those few subscribers that choose to leave SSTC, while  
16 encumbering the entire remaining subscribers with the burden of funding the  
17 porting benefit. In addition, current implementation rules do not provide the  
18 necessary competitive playing field to allow wireless subscribers to port to SSTC's  
19 wireline services.

20 **Q: What are the anticipated costs of implementing Intermodal LNP?**

21 A: The anticipated costs of implementing Intermodal LNP can be categorized into four  
22 (4) basic areas: 1) Switching related costs, 2) Number Portability Administration  
23 Center (NPAC) related costs, 3) Administrative/Technical costs and 4) Transport

1 Costs. The LNP Petition filed on behalf of SSTC included an Exhibit detailing the  
2 estimated implementation costs for intermodal LNP. This Exhibit is attached as  
3 Exhibit [1]. Each of the cost elements in these categories will be identified in the  
4 following paragraphs.

5 Switching Related Costs

6 The cost elements in this category include switching generic software upgrades,  
7 LNP software features, prerequisite software features to support the LNP features,  
8 any requisite switch hardware to support the operation of the LNP software, switch  
9 vendor installation costs, vendor software activation fees, and maintenance  
10 expenses attributable to LNP. As part of the cost estimates provided with the SSTC  
11 Waiver Petition, the cost estimates for this category are detailed as follows:

12 LNP Hardware Requirements

13 SSTC utilizes a Nortel Networks (Nortel) DMS-10 as its wireline switching  
14 platform. SSTC does not currently record AMA locally. Currently, all of SSTC's  
15 toll traffic is recorded by SDN Communications. Based on the complexity of LNP,  
16 SSTC may require the implementation of AMA recording. The implementation of  
17 AMA recording will require that additional of the Nortel IBSR hardware and on the  
18 Petitioner's DMS-10 switching system. These costs are estimated at \$35,000.  
19 These cost estimates are reflected in the Petitioner's non-recurring cost exhibit.

20 LNP Software Features

21 According to oral conversations with Nortel, the SSTC DMS-10 currently has the  
22 generic software load that will support LNP. The LNP software features have not  
23 been activated in SSTC's DMS-10 platform. Based on LNP pricing estimates from

1 Nortel Networks, the non-recurring cost estimate for the LNP Basic software  
2 feature for DMS-10 switches is \$4 per equipped line, which amounts to  
3 approximately \$3,200 for SSTC. Nortel does not charge a recurring Right-To-Use  
4 (RTU) fee for these features. Based on the oral information provided by Nortel,  
5 SSTC claimed \$3,200 for LNP software features and did not claim any recurring  
6 cost estimates for LNP software as part of its estimated costs.

7 Additional Software Features

8 With the addition of the AMA recording capabilities, SSTC will require the  
9 addition of the appropriate software features to support AMA recording functions.  
10 These software features are estimated at \$15,000 based on oral conversations with  
11 Nortel. Nortel does not charge a recurring Right-To-Use (RTU) fee for these  
12 features. Therefore, SSTC claimed \$15,000 in non recurring costs with no  
13 recurring cost estimates for additional LNP software as part of its estimated LNP  
14 implementation costs.

15 Additional Vendor Fees

16 With the addition of new hardware in SSTC's DMS-10, Nortel will assess a project  
17 start-up fee. Based on oral LNP pricing estimates from Nortel Networks, SSTC  
18 also claimed as a Non-Recurring Additional Software Fee an estimated \$5,000  
19 charge required for vendor project start-up fees. If the LNP is ultimately  
20 implemented as a result of this hearing, the Petitioner will revise the estimate for  
21 additional vendor fees based on firm pricing quotations from Nortel Networks.

22

23

1        Initial LNP Translations

2        There are several activities that are required to initially set up and test the basic  
3        translations for LNP. The non-recurring initial translations cost estimates were  
4        based on the anticipated fees to data-fill and test basic LNP functionality in the  
5        Petitioner's switching system. This testing includes coordination of testing with the  
6        SOA provider, coordination of testing with any transiting carriers, verification of  
7        proper LNP dip activities, verification of billing system interaction, and other  
8        translations activities. This cost estimate is approximately \$10,000. In order to  
9        allow time for coordination of testing with other entities, it is assumed that the  
10       initial translations testing will require approximately two (2) man-weeks of  
11       translations activities by a third party technical consultant for the host DMS-10  
12       switch, at a loaded hourly rate of \$100 per hour. The remaining portion of this cost  
13       estimate includes travel, living and other miscellaneous expenses.

14       Technical Implementation and Testing

15       There are several activities that are required to initially set up and test the basic  
16       translations for each CMRS carrier requesting Intermodal LNP. The non-recurring  
17       technical implementation and testing cost estimates were based on the anticipated  
18       fees to data-fill and test specific Intermodal LNP functionality in the Petitioner's  
19       switching system. The non-recurring technical implementation and testing cost  
20       estimates were based on performing number porting tests individually associated  
21       with each CMRS to ensure that the ported number route correctly flows through the  
22       Petitioner's network. As the FCC has not required a formal Interconnection  
23       Agreement, it is assumed that the Petitioner will be responsible for performing these

1 tests in order to ensure proper call routing. This cost estimate was based on \$5,000  
2 for each CMRS Carrier. The cost estimate is based on 40 hours of testing at \$100  
3 per hour by a 3<sup>rd</sup> party resource including travel and living expenses. SSTC will  
4 revise this estimate if other CMRS carriers plan to offer services in the SSTC  
5 exchange areas.

#### 6 NPAC Related Costs

7 The cost elements in this category include Service Order Administration (SOA)  
8 costs, LNP Query costs, and connection costs with the LNP database. As part of  
9 the cost estimates provided with the SSTC Waiver Petition, the cost estimates for  
10 this category are detailed as follows:

#### 11 Service Order Administration

12 As part of the LNP implementation process, the Petitioner must select a provider to  
13 administer updates to the Number Portability Administration Center (NPAC) LNP  
14 database. In anticipation of reduced porting intervals in the future, the Petitioner  
15 has elected to include the costs for an automated SOA system. The SOA cost  
16 estimates were based a compilation of SOA services price lists from several firms  
17 providing automated SOA services. These cost estimates represent the anticipated  
18 start-up costs and recurring costs levied by the SOA provider to utilize its  
19 automated services to update the LNP databases. The sample pricing scenarios  
20 were obtained under Non Disclosure Agreement (NDA) from several SOA services  
21 providers. As the Petitioner has not entered into any contracts with these or any  
22 SOA entities, firm pricing cannot be provided. As an estimate, the non-recurring  
23 SOA costs were assumed to be \$2,000 with the recurring SOA costs assumed to be

1 \$500. Should the Petitioner enter into a contract with an automated SOA provider,  
2 these cost estimates can be revised.

3 LNP Query Charges

4 With the implementation of LNP, the Petitioner will incur charges for each LNP  
5 query launched for its subscribers. The LNP query cost estimates were based on a  
6 compilation of SOA services price lists from several firms providing automated  
7 SOA services. The sample pricing scenarios were obtained under NDA from  
8 several SOA Services providers. As the Petitioner has not entered into any  
9 contracts with these or any SOA entities, firm pricing cannot be provided. The non-  
10 recurring LNP Query cost estimate represents the anticipated start-up costs levied  
11 by the SOA provider to utilize its services to dip its database. This initial set-up  
12 charge is assumed to be \$500. The recurring LNP Query cost estimates were based  
13 on the assumption that each of the Petitioner's access lines would generate five (5)  
14 to six (6) call attempts per day; each of the call attempts would generate an LNP  
15 query. The query charge is assumed to range between \$0.001 and \$0.0005 per  
16 query. Based on these assumptions, the recurring LNP Query charge was assumed  
17 to be \$100. Should the Petitioner enter into a contract with an automated SOA  
18 provider, these cost estimates can be revised.

19 Connection Costs w/LNP Database

20 With the implementation of LNP, the Petitioner will incur set-up charges levied by  
21 the SOA provider to enter its NECA Operating Company Number (OCN) and Point  
22 Codes for each switch launching LNP queries to the SOA's LNP database. The  
23 non-recurring connection costs with LNP database estimate was based on a

1 compilation of SOA services price lists from several firms providing automated  
2 SOA services. The sample pricing scenarios were obtained under NDA from  
3 several SOA Services providers. As the Petitioner has not entered into any  
4 contracts with these or any SOA entities, firm pricing cannot be provided. The cost  
5 estimate for this element was estimated at \$150 assuming a single point code at  
6 \$150 per point code. Should the Petitioner enter into a contract with an automated  
7 SOA provider, this cost estimate can be revised.

#### 8 Technical and Administrative Costs

9 The cost elements in this category include testing and verification of each ported  
10 DN, translations for each ported DN, administrative cost estimates, regulatory cost  
11 estimates, customer care cost estimates, and marketing cost estimates. As part of  
12 the cost estimates provided with the SSTC Waiver Petition, the cost estimates for  
13 this category are detailed as follows:

#### 14 Testing and Verification of Each Ported Dial Number

15 This cost estimate addresses the anticipated activities to test each “ported out”  
16 directory number (DN) to verify the proper routing of the DN. The recurring  
17 Testing/Verification cost estimates were based on one (1) hour per port at the  
18 Petitioner’s loaded technical labor costs of \$35 per hour.

#### 19 Per Port Translations

20 This cost estimate addresses the anticipated translations activities to “port out” each  
21 DN. The recurring translations cost estimate was based on \$50 per port.  
22  
23

1        Administrative Costs

2        The implementation of LNP will require SSTC to implement new administrative  
3        policies and procedures. The non-recurring administrative cost estimates were  
4        based on providing LNP process training for the Petitioner's administrative  
5        personnel. The training is assumed to be provided by the entity providing  
6        automated SOA services. The Petitioner has not selected a SOA provider at this  
7        time. The non-recurring costs estimates are based on a one-week onsite customer  
8        service representative training class, including the instructor's travel and living  
9        expenses. This cost is assumed to be \$5,000. The recurring administrative cost  
10       estimate addresses the anticipated administrative activities required with entry of  
11       the ported number into the SOA system. The recurring administrative cost  
12       estimates were based on one half (1/2) hour per port at the Petitioner's loaded  
13       administrative labor costs of \$46 per hour.

14       Regulatory Costs

15       This cost element is associated with the Petitioner's Legal Fees and Regulatory  
16       Consulting fees. The legal fees are associated with the Petitioner's attorneys. The  
17       anticipated fees are associated with reviewing the legal aspects of LNP filings and  
18       LNP implementation. The regulatory consulting fees are typically associated with  
19       the updates required to various National databases (NECA Tariff 4, Telcordia  
20       LERG, etc.) and the possible assistance with the completion of the NECA End User  
21       Charge worksheets. This cost is estimated at 100 hours at an average rate of \$150  
22       per hour and includes travel, living, and miscellaneous expenses. Based on the

1 legal activities required to implement LNP, the Petitioner may revise this figure at a  
2 later date.

### 3 Customer Care Costs

4 The implementation of LNP will require SSTC to implement new customer care  
5 policies and procedures. The non-recurring customer care cost estimates were  
6 based on providing LNP customer care training for the Petitioner's administrative  
7 personnel. The training is assumed to be provided by the entity providing the  
8 Petitioner's billing platform services. The Petitioner has not developed the  
9 Customer Care and Billing processes for LNP at this time. The costs estimates are  
10 based on a one-week onsite Operational Support Services (OSS) training class. The  
11 recurring customer care cost estimates were based on one-half (1/2) hour per port at  
12 the Petitioner's loaded customer care labor costs of \$46 per hour. This cost  
13 estimate addresses the anticipated administrative activities required with updating  
14 the Petitioner's customer care and billing system and to track the "ported out" DNs.

### 15 Marketing and Informational Flyer Cost Estimates

16 The implementation of LNP will likely generate subscriber confusion from the  
17 addition of an End User Charge for the implementation of LNP. The Petitioner  
18 plans to develop an informational flyer to help educate the subscriber base by  
19 explaining LNP and the reasons for the proposed LNP End User Charge appearing  
20 on the subscribers' monthly local service bill. The non-recurring marketing and  
21 informational flyer cost estimates were based on the costs required to develop an  
22 informational flyer and billing insert explaining LNP and any end-user fees that  
23 may apply. The total non-recurring estimated costs in this category were expressed

1 as a “per access line” cost and were estimated at approximately \$2.00 per  
2 subscriber. This cost estimate includes the development of the explanatory LNP  
3 text, the graphic design artwork, and first run printing costs. The recurring  
4 marketing and informational flyer cost estimates were based on \$3.00 per  
5 subscriber per year for volume print costs, handling, and mailing the periodic  
6 flyer/bill insert. This recurring marketing/informational flyer cost estimate was  
7 amortized over 12 months to arrive at an estimated monthly fee for the Cost  
8 Exhibit.

#### 9 Billing/Customer Care Software Updates

10 The Petitioner’s billing and customer care system will require software upgrades to  
11 support LNP. The non-recurring billing and customer care software upgrade cost  
12 estimates represents the anticipated costs to upgrade the Petitioner’s billing system  
13 to accommodate LNP functionality. This upgrade was estimated as an allocated  
14 cost of the Petitioner’s annual billing system upgrade.

#### 15 Transport-Related Cost Estimates

16 The cost elements in this category include the estimated costs of transport to  
17 connect the Petitioner’s exchange with the CMRS carriers, anticipated cost  
18 estimates for transiting CMRS connections, and anticipated cost estimates for pass-  
19 through N-1 Tandem LNP queries. As part of the cost estimates provided with the  
20 SSTC Waiver Petition, the cost estimates for this category are detailed as follows:

#### 21 Transport Cost Estimates

22 The Petitioner will require direct Type 2B DS1 transport facilities from the  
23 Petitioner’s exchange to each CMRS provider’s Point of Interconnection (POI) for

1 those CMRS carriers requesting intermodal LNP. The Petitioner does not possess  
2 POI information for each CMRS carrier. The non-recurring wireless carriers POI  
3 cost estimates represent the costs associated with providing a Type 2B DS1 span to  
4 each CMRS provider. As stated in the Petition, the Petitioner assumes  
5 interconnection will be required with five (5) CMRS carriers. The Petitioner  
6 estimates that the non-recurring transport costs for each CMRS will be  
7 approximately \$5,000 per exchange. This cost estimate includes the switch DS1  
8 interface hardware and supporting equipment required to place a Type 2B DS1 span  
9 into service. The recurring wireless carriers POI cost estimates were based on  
10 monthly transport lease cost estimates. As stated in the Petition, the Petitioner  
11 assumes interconnection will be required with five (5) CMRS carriers. The  
12 Petitioner estimates that the recurring transport costs for each Type 2B DS1 will be  
13 approximately \$800 per month. SSTC plans to revise this recurring transport cost  
14 estimate once POI information is provided by the CMRS carriers and firm pricing  
15 can be provided by a transport provider (such as SDN Communications or Qwest).

#### 16 Mobile Telephone Switching Office (MTSO) POI Connection Cost Estimates

17 The Petitioner does not possess POI information for the CMRS carriers that have or  
18 will likely to provide a Bona Fide Request (BFR) to the Petitioner for intermodal  
19 LNP. The possibility exists that a transiting carrier (such as Qwest or SDN  
20 Communications) may establish DS1 connections with one or more of the CMRS  
21 carriers. The MTSO POI connection cost estimates represent the anticipated costs  
22 for the Petitioner's share of this connection, if required. The non-recurring MTSO  
23 POI connection cost estimates were based on an estimate of the start-up costs to

1 utilize a transiting carrier for CMRS MTSO connections, if required. The recurring  
2 MTSO POI connection cost estimates were based on the Petitioner's anticipated  
3 share of monthly lease for the transiting carrier MTSO POI connection cost  
4 estimates, if required. If the CMRS carriers elect to directly connect with the  
5 Petitioner (without a transiting carrier) on a direct Type 2B connection to the  
6 CMRS' Mobile Telephone Switching Office (MTSO), these cost estimates will  
7 likely be not applicable.

8 Transiting Dip (Minimum) Cost Estimates

9 This cost estimate was based on the assumption that the transiting carrier may need  
10 to perform some LNP queries when the Petitioner's N-1 carrier fails to do so. The  
11 transiting non-recurring dip cost estimate describes the anticipated costs of the non-  
12 recurring set-up charges to enable the Petitioner to receive dip charges from a  
13 transiting carrier such as SDN Communications, if required. The initial setup  
14 charges are likely to be passed on to Petitioner. SSTC has estimated this cost to be  
15 \$500. The transiting carrier recurring dip cost estimates describe the anticipated  
16 costs of the minimum dip charges from a transiting carrier. These charges are likely  
17 to be passed on to Petitioner. SSTC has estimated this cost estimate to be \$100 per  
18 month. If the CMRS carriers elect to directly connect with the Petitioner (without a  
19 transiting carrier) on a direct Type 2B connection to the CMRS' Mobile Telephone  
20 Switching Office (MTSO), these cost estimates will likely be not applicable.

21 **Q: It appears that one of the larger estimated costs projected for the**  
22 **implementation of Intermodal LNP relates to transport costs. What**

1 **considerations concerning compensation for transport costs are applicable to**  
2 **the implementation of Intermodal LNP?**

3 A: With regard to the direct Type 2B connections to the wireless carriers described in  
4 the preceding cost estimates, these cost estimates are identified as required  
5 connections to allow Intermodal LNP to function correctly within the Petitioner's  
6 existing billing and customer care systems.

7 **Q: If no direct Type 2B DS1 facilities are available for interconnection with the**  
8 **CMRS carriers, what happens for SSTC?**

9 A: Without direct Type 2B facilities, the ported calls will be routed based on the Local  
10 Routing Number (LRN) delivered with the LNP query. The LRN will contain the  
11 NPA-NXX of the wireless carrier. Based on this NPA-NXX, these calls will be  
12 routed as toll calls over SSTC's existing toll routes to SSTC's Access Tandem  
13 (SDN Communications).

14 **Q: In your opinion, are the proposed Type 2B DS1 facilities to each CMRS carrier**  
15 **cost justified?**

16 A: Without actual traffic data, it is impossible to determine the feasibility of a  
17 particular facility. However, based on the anticipated traffic levels generated by the  
18 projected intermodal LNP ports, it appears that the construction of these facilities is  
19 not cost-justified. If the facilities were feasible, it is likely that the wireless carriers  
20 would have implemented them already as they have in other areas. Based on the  
21 projected traffic levels, it appears that the direct facilities between Petitioner and the  
22 wireless carriers required for LNP would be highly under-utilized and very  
23 inefficient.

1 **Q: It appears that some of the anticipated cost estimates are based on the quantity**  
2 **of anticipated numbers that would be ported to a CMRS carrier. How was the**  
3 **number of ports determined?**

4 A: The quantity of projected ports is a function of the competitive environment in the  
5 proposed service area, the number of CMRS carriers, and other statistical data.  
6 The data that is currently available concerning porting activity for CMRS carriers  
7 on a wide-scale basis is limited. It is my understanding that no Petitioner  
8 customer has ever made an inquiry to Petitioner regarding LNP or a request for  
9 LNP. With respect to wireless LNP nationwide, to date, the demand for wireless  
10 porting has been far less than expected and most ports have been from one  
11 wireless carrier to another. Wireline to wireless porting appears to be a small  
12 fraction of wireless porting in general.<sup>1</sup> According to NeuStar, 95% of wireless  
13 ports have been from one wireless carrier to another and only 5% of wireless ports  
14 were between wireline and wireless carriers.<sup>2</sup> With lack of ubiquitous quality and  
15 incomplete coverage of the Petitioner's existing service area by the existing  
16 wireless carriers, I believe that the percentage would be even smaller than in other  
17 more urban parts of the nation. For purposes of the cost exhibit, approximately  
18 one (1) intermodal port per year was estimated,<sup>3</sup> which is well under the five (5)  
19 percent of the Petitioner's access lines. Accordingly, there appears to be little, if  
20 any, demand for LNP and, absent such demand, no public benefit will be derived

---

<sup>1</sup> See "Survey Finds Little Impact From LNP", *RCR Wireless News*, February 9, 2004 ed., reporting that according to a consumer survey report from CFM Direct, very few telecommunications customers have switched their wireline phone numbers to wireless.

<sup>2</sup> See NARUC Notebook, *Communications Daily*, Vol. 24, No. 46, p. 4 (March 9, 2004)

<sup>3</sup> While actual industry figures are not available, most wireless carriers are currently experiencing a porting rate of between three percent (3%) and six percent (6%). Of these ports, it is estimated that between one percent (1%) and three percent (3%) are intermodal.

1 from LNP. Even if some level of LNP demand develops in the future, the total  
2 implementation costs that would be incurred by Petitioner to implement and  
3 maintain LNP would require re-evaluation based on the customer demand,  
4 quantity of ports, and the revised estimated costs for the required LNP  
5 infrastructure elements.

6 **Q: Will any of the Petitioner's estimated costs change if the number of estimated**  
7 **ports is changed?**

8 A: Yes. There are several of the estimated recurring costs that are driven by the  
9 number of ports. These cost elements include the recurring translations costs, the  
10 recurring testing and verification of each ported number, the recurring  
11 administrative cost estimates, and the recurring customer care costs. If the  
12 projected number of ports increases, these costs will increase. If the number of  
13 projected ports decreases, these costs will decrease.

14 **Q: The current porting interval is currently four (4) days. If the porting interval**  
15 **were shortened to two (2) days or less, what effect, if any, would this shortened**  
16 **interval have on the estimated costs?**

17 A: The current industry experience with Intermodal porting is has not been without  
18 implementation issues. Significant problems meeting the current four (4) day  
19 porting interval have been reported. Assuming that the implementation issues are  
20 refined to the point where a shorter porting interval can be supported, the Petitioner  
21 has included the known cost elements to support a shorter porting interval. The  
22 Petitioner has assumed the use of an automated SOA system as part of their  
23 anticipated LNP implementation costs. An automated SOA system will allow the

1 Petitioner to accommodate an electronic request and acknowledgement for the  
2 ported numbers. Therefore, the Petitioner does not anticipate any increases in its  
3 SOA related non-recurring or recurring cost estimates. It is possible that additional  
4 recurring costs in the areas of translations, technical implementation, testing,  
5 verification, customer care, and administrative would occur if the porting interval  
6 were to be reduced to require that porting activities occur outside of the standard  
7 business day (expedited requests, nights, weekends, and holidays). If porting is  
8 required during these times, additional loaded labor rates will be incurred. If the  
9 porting requirements are confined to the standard business day, the Petitioner does  
10 not anticipate any additional recurring LNP costs. However, it is possible that  
11 unforeseen requirements could require additional charges.

12 **Q: Are there any other potential costs that could impact SSTC with the**  
13 **implementation of Intermodal LNP?**

14 A: If SSTC must implement intermodal LNP, all carriers with EAS arrangements with  
15 SSTC and their customers will be impacted because the other carrier will have to  
16 LNP dip all EAS calls. This would increase the cost of EAS between SSTC and the  
17 other carrier and could result in a loss of EAS options to the customer or an increase  
18 in the cost of optional EAS service.

19 **Q: Some telecommunications industry analysts have suggested that Foreign**  
20 **Exchange Service (FX) could be used to provide connections to accommodate**  
21 **intermodal LNP. Is this a reasonable alternative?**

22 A: There have been industry discussions of using an FX service for Intermodal LNP  
23 interconnection. An FX service is a line appearance that is extended from the

1 “home” exchange to a “foreign” exchange using dedicated point-to-point facilities.  
2 The FX service is engineered on a per line basis. It is not a common trunk that can  
3 be used by a carrier for routing purposes. With an FX service, the LEC has  
4 customers and facilities in one rate center and provides service to customers in  
5 another rate center using the same “home” number block. To do this, facilities are  
6 extended from the LEC rate center to the foreign rate center where the customer  
7 resides. It is important to note that the customer pays for the use of these facilities.  
8 The LEC is compensated for their facilities and lost toll revenue through these  
9 customer charges. It is unknown exactly how an ILEC would implement an FX  
10 service to accommodate Intermodal LNP. The exact connectivity, rate elements,  
11 and network configuration for the proposed Intermodal LNP FX service appear to  
12 be undefined. As such, any discussion of using FX as a viable transport alternative  
13 for Intermodal LNP transport is purely speculation.

14 **Q: You have addressed several estimated costs for Intermodal LNP. How would**  
15 **these cost estimates change if Petitioner must implement only Intramodal**  
16 **(wireline to wireline) LNP?**

17 **A:** All cost elements would stay the same, but the amount of the cost estimates could  
18 change. It is my understanding that both wireline providers would be in the same  
19 rate center. Accordingly, the primary change in the estimated costs would be in the  
20 area of transport costs. The petitioner estimates that these costs would likely be  
21 significantly reduced. Intramodal LNP has clearly defined processes for the  
22 exchange of traffic between the respective wireline carriers competing in a clearly  
23 defined rate center. In the intramodal LNP cases with which I am familiar, the

1 carriers have entered into an Interconnection Agreement. The Intramodal  
2 Interconnection Agreement addresses the methods and compensation that will be  
3 used to establish interconnection and exchange traffic between the wireline carriers.  
4 The compensation for the traffic volumes is typically in the form of reciprocal  
5 compensation. In addition, the recurring costs for testing of each ported number  
6 would likely be reduced since the dialing plans and routing between the carriers will  
7 likely not change on a regular basis. The reduction of these costs is dependent upon  
8 the volume of ports. The remaining costs will likely be unchanged.

9 **Q: What would be the timeframe required for the Petitioner to fully implement,**  
10 **test and place Intermodal LNP into commercial service, if required to do so?**

11 A: Please refer to the LNP Implementation Timeline, attached hereto as Exhibit [2].  
12 The Timeline details the individual, inter-dependent tasks necessary to fully  
13 implement Intermodal LNP. They are arrayed in a self-explanatory fashion,  
14 showing the anticipated duration of each task and its relationship to other tasks.  
15 The overall duration that results for the Timeline supports that approximately six  
16 (6) months would be required to fully prepare for, implement, test and place  
17 Intermodal LNP into commercial service, as stated in the SSTC Waiver Petition.  
18 As with any planning horizon, this timeline does not take into account holidays or  
19 other unforeseen delays due to Force Majure.

20 **Q: Does this conclude your direct testimony?**

21 A: Yes. I also reserve the opportunity to revise or modify this pre-filed direct  
22 testimony at or before the hearing if I receive additional information pertaining to  
23 the issues I presented herein.

**Q: What is your name and address?**

A: My name is Randy Houdek. My business address is 218 Commercial St., PO Box 157, Highmore, SD, 57345. My business telephone number is (605) 852-3851.

**Q: By whom are you employed and in what capacity?**

A: I am the General Manager of Venture Communications Cooperative (VCC). VCC is a rural independent local exchange carrier that provides local exchange, exchange access and other telecommunications services to 13,666 access lines within its South Dakota service area, which includes the exchanges of: Blunt, Britton, Gettysburg, Harrold, Highmore, Hitchcock, Hoven, Langford, Lebanon, Onaka, Onida, East Onida, West Onida, Ree Heights, Rosholt, Roslyn, Selby, Sisseton, Tolstoy, Tulare, Wessington, Wessington Springs, Bowdle, Pierpont, Roscoe and Seneca.

**Q: Does your company have any direct points of interconnection with any wireless carrier and/or does your company provide any blocks of numbers for your company's rate centers to any wireless carrier?**

A: Yes. VCC has one Type 2B direct connection with Western Wireless at Sisseton (698) and three Type 1 connections with Verizon at Highmore, Gettysburg and Britton. VCC does provide blocks of numbers to selected wireless carriers in certain exchanges, but these carriers are evaluating replacing the Type 1 connections with standard Type 2B direct connections. The blocks of numbers VCC provides to the wireless carriers are Britton (448), Gettysburg (765) and Sisseton (698, 742)

**Q: How do the local calling areas of your exchanges compare with those of the wireless carriers operating in your area?**

1 A: VCC has 26 exchanges many of which are very rural. Our service areas are de-  
2 fined by where we have physical cable plant. However, the wireless carriers serve  
3 by the reach of a radio frequency from a tower site. Their wireless local calling ar-  
4 eas are often much larger than our exchange boundaries. The boundaries of our  
5 wire/rate centers and the local calling areas of the wireless carriers serving in our  
6 area vary greatly.

7 **Q: Does your company provide any Extended Area Service (EAS) plans to its sub-**  
8 **scribers which connect to adjacent exchanges of other LECs?**

9 A: VCC provides EAS between its exchange and the following exchanges of adjacent  
10 LECS:

<u>VCC Exchange</u>	<u>Adjacent Exchange (LEC)</u>
Hitchcock	Huron (Qwest)
Rosholt	New Effington (Roberts County Tel. Co-op)
Roslyn	Webster (Interstate Telecommunications Co-op)
Selby	Glenham, Mobridge (West River-Hazen) and Mound City (Valley Telecommunications Co-op)
Sisseton	Claire City, New Effington, Peever and Veblen (Roberts County and RC Communications)
Tulare	Redfield (Qwest)
Pierpont	Bristol (James Valley Tel.) Webster (ITC)
Roscoe	Ipswich (Valley)

22 **Q: What is the current method of routing calls from your subscriber's**  
23 **landline phones to wireless phone numbers?**

1 A: As an example, when a subscriber located in Highmore uses his/her landline phone  
2 to call a wireless phone number, the call is routed from the subscriber's landline  
3 phone to the Highmore central office switch, where it is determined to be a non-  
4 local call and is therefore switched to a toll trunk group. The toll trunk carries the  
5 call to SDN Communication's (SDN) Centralized Equal Access (CEA) tandem,  
6 which is located in Sioux Falls, to be routed to the appropriate Point of Interconnec-  
7 tion (POI) of the wireless carrier. Verizon also has direct Type 1 wireless connec-  
8 tions at VCC's Highmore, Gettysburg and Britton exchanges. When a VCC mem-  
9 ber in those exchanges calls one of these wireless NXXs, the call is routed to that  
10 trunk group and the call goes directly to the wireless carrier. For the Western Wire-  
11 less direct Type 2B DS1 connection at Sisseton, any local exchange traffic from  
12 Sisseton or any EAS traffic from Claire City, New Effington, Peever, Rosholt or  
13 Veblen, is routed by local trunks to the Western Wireless direct connection at Sisse-  
14 ton.

15 **Q: What is the number of wireless carriers authorized to serve in your company's**  
16 **service area?**

17 A: To my knowledge, five (5) wireless carriers are authorized to serve in VCC's ser-  
18 vice area (Verizon Wireless, Western Wireless, Sprint PCS, RCC and Nextel).

19 **Q: Have any subscribers requested local number portability (LNP) from your**  
20 **company?**

21 A: To my knowledge, not a single VCC subscriber has requested local number port-  
22 ability from VCC. Further, there was considerable press and TV coverage in our  
23 service area about this issue when the FCC first issued its November 10 *Order*.

1 **Q: Since the passage of the 1996 Telecom Act have any wireline carriers ever re-**  
2 **quested LNP from your company?**

3 A: No.

4 **Q: Have any wireless carriers submitted bona fide requests for LNP and if so**  
5 **when?**

6 A: Yes. Western Wireless, Verizon and RCC.

7 **Q: Are there any existing capital investments for broadband that will be diverted**  
8 **if your company must deploy LNP?**

9 A: Yes. DSL and broadband services are of utmost importance to our customers. Of  
10 all our new services, our customers are most interested in broadband. We are up-  
11 grading our networks to provide broadband services. Any amount of capital in-  
12 vestment that is diverted to the implementation of LNP will reduce needed capital  
13 from broadband investments. VCC is a very rural company and has limited re-  
14 sources to fund network investments into remote rural areas. We would like to  
15 serve the real demands of our customers rather than provide a service that has been  
16 mandated by the FCC that our customers are not requesting.

17 **Q: What will the impact be on VCC and its customers if it is required to provide**  
18 **wireless LNP?**

19 A: If WLNP is required, the cost of implementing WLNP will hit VCC and its custom-  
20 ers hard. We have limited economies of scale in implementing WLNP. Exhibit 1  
21 to our Petition shows a non-recurring impact of \$60 per access line and a reoccur-  
22 ring impact of \$19 per line. This is for a service that not a single customer has re-  
23 quested to date. There is little, if any, demand for WLNP in our service area. With

1 little demand there is a substantial burden to pay for the service. Further, the vast  
2 majority of our customers will have to pay for those few, if any, who may decide to  
3 port their numbers. It's a very poor bargain for the majority of our customers.

4 **Q: In your experience as the manager of VCC have you seen increases or addi-**  
5 **tions to the itemized fees on your customer's telephone bills?**

6 A. Yes. Most customers tell me there have been too many new fees or fee increases on  
7 their bills in recent years. We have received considerable protests from customers  
8 when the subscriber line charge (SLC) went from \$3.50 to \$6.50 after the MAG  
9 Plan was approved by the FCC.

10 **Q: What do you expect your customer's reaction to be to any new LNP fees on**  
11 **their bills?**

12 A. If it is anything close to \$19 per month the reaction will be very hostile. The vast  
13 majority of our customers would gain no benefit from this service, and I expect  
14 strong protests to the VCC directors, staff and myself. The protests will be far  
15 worse than those to the SLC increase. Many of our customers are elderly. They  
16 will be especially hard hit.

17 **Q: Do you expect that the costs of implementing WLNP could create the necessity**  
18 **of a rate increase for VCC?**

19 A. Depending on what costs are recoverable in any LNP end user fees, if the remainder  
20 is significant, VCC will not be able to absorb them and may have to implement a  
21 dial tone rate increase to recover any deployment costs.

22 **Q: Do you have any concluding comments?**

1 A There are still so many unknowns regarding WLNP implementation in rural ex-  
2 changes. It makes much more sense to wait for the FCC or Courts to clarify key is-  
3 sues, such as: 1) How are rural ILECS to interconnect with distant wireless POI?  
4 2) What would the porting interval be? and 3) If a number is ported how would  
5 ILECs maintain the original wireline rate center when the service areas of wireline  
6 and wireless companies vary so greatly? There are so many unanswered questions  
7 that it clearly makes sense to save our resources until these questions are answered.  
8 Doing so will save our customers significant dollars and help us provide services  
9 they actually want such as broadband.

10 **Q: Does this conclude your direct testimony?**

11 A: Yes. I also reserve the opportunity to revise or modify this pre-filed direct testi-  
12 mony at or before the hearing if I receive additional information pertaining to the  
13 issues I presented herein.

OF VENTURE COMMUNICATIONS  
COOPERATIVE FOR SUSPENSION OR  
MODIFICATION OF § 251(b)(2) OF THE  
COMMUNICATIONS ACT OF 1934 AS  
AMENDED

Docket No. TC04-060  
REBUTTAL TESTIMONY OF  
RANDY W. HOUDEK

REBUTTAL TESTIMONY OF  
RANDY W. HOUDEK  
ON BEHALF OF  
VENTURE COMMUNICATIONS COOPERATIVE

June 14, 2004

1 Q. Please state your name, business name and address.

2 A. **My name is Randy Houdek. I am the General Manager of Venture Communica-**  
3 **tions Cooperative (“Venture”), whose address is 218 Commercial SE, Highmore,**  
4 **South Dakota 57345.**

–5 Q. What is the purpose of your testimony?

6 A. **I will provide rebuttal testimony to various statements made by Ron Williams in his**  
7 **testimony filed on May 28, 2004 on behalf of WWC License L.L.C. (Western Wire-**  
8 **less).**

9 Q. At page 6, lines 8-10, Mr. Williams alleges that the Petitioners “waited 4 months to seek  
10 a suspension of their LNP obligations, hopeful that this tactic would result in delay of  
11 their legal obligations.” How do you respond?

12 A. **I dispute Mr. Williams’ characterization of events as baseless and inflammatory.**  
13 **Once the FCC made it clear that wireline carriers would be required to port num-**  
14 **bers to wireless carriers in areas outside the top 100 MSAs by May 24, 2004, Ven-**  
15 **ture took immediate steps to investigate the cost and the processes involved with**  
16 **LNP and to explore its legal options. Because Venture had no experience with LNP,**  
17 **it took time to gather the pertinent information and to make the decision to seek a**  
18 **suspension of the requirement from the Commission. Further, the suspension peti-**  
19 **tion itself took time and effort to prepare because Venture wanted to present as**  
20 **complete a petition as possible, accompanied by cost information as complete as**  
21 **possible.**

22 Q. Do you agree with Mr. Williams’ statement at page 14, lines 19-22, in which he states  
23 that “LECs will need to route a call to a ported number to the serving tandem” and to Mr.

1 Williams' statement at page 15, lines 1-4 when he discusses the routing of allegedly "lo-  
2 cal calls?"

3 **A. I believe that Mr. Williams' statement is not consistent with the interconnection**  
4 **agreement signed by Venture and Western Wireless. Pursuant to that agreement,**  
-5 **Venture did not agree to route traffic destined for Western Wireless to the serving**  
6 **tandem. Rather, traffic terminating to Western Wireless is routed to Western Wire-**  
7 **less via a direct connection for only three of Venture's exchanges, including their lo-**  
8 **cal calling areas. Traffic terminating to Western Wireless in all other Venture ex-**  
9 **changes is routed to an interexchange carrier. Only traffic routed to Western Wire-**  
10 **less via a direct connection is routed as "local traffic." All other traffic to Western**  
11 **Wireless is routed to an interexchange carrier as a toll call. Therefore, it appears**  
12 **that Western Wireless' argument really is a bad faith attempt to change the agree-**  
13 **ment between the parties.**

14 **Q. At page 19, lines 8-10, Mr. Williams states that it is his belief that "the FCC views that it**  
15 **is the originating carrier's responsibility to deliver local traffic for termination and that**  
16 **the costs associated with fulfilling that responsibility are not a number portability cost."**  
17 **What is your response to this statement?**

18 **A. Mr. Williams' statements are inconsistent and should be rejected. First he argues**  
19 **that Venture should be required to install new facilities to deliver ported calls to**  
20 **Western Wireless and then he argues that the cost of those facilities are not number**  
21 **portability costs. Further, as discussed at lines 3-12 above, Mr. Williams' suggestion**  
22 **that it is Venture's responsibility to deliver traffic destined to Western Wireless**

1 through a serving tandem is not consistent with the interconnection agreement be-  
2 tween Venture and Western Wireless.

3 Q. At page 20, lines 13-16, Mr. Williams states that “[t]he routing methods proposed by the  
4 Petitioners are inefficient in that they make little or no utilization of existing equipment  
-5 and shared facilities currently used to exchange calls with other carriers.” How do you  
6 respond?

7 A. The routing methods reflected in the cost exhibit attached to Venture’s Petition are  
8 based on the current routing arrangements that Venture has in place with other  
9 carriers, namely, calls that are dialed on a local 7-digit basis are routed via direct  
10 connections. For example, there is a direct connection between Venture and West-  
11 ern Wireless in the Gettysburg exchange and therefore, Venture customers in that  
12 exchange can call a Western Wireless customer on a local 7-digit basis. Therefore, if  
13 calls to numbers ported to a carrier are to be dialed on a local 7-digit basis, a direct  
14 connection needs to be established between the carriers.

15 Q. Would Western Wireless’ routing proposal have impacts to Venture beyond LNP?

16 A. Yes. It is my understanding that Western Wireless’ proposal would increase Ven-  
17 ture’s costs. First, Western Wireless’ proposal would require Venture to pay for  
18 new facilities to the tandem provider that it does not need for any purpose other  
19 than to route calls to ported numbers to wireless carriers. Second, the proposal  
20 would improperly shift to Venture the responsibility to pay Western Wireless’ tran-  
21 sit traffic charges to the tandem provider for transporting the traffic to the wireless  
22 carriers.

23 Q. Is there any other impact?

1 A. Yes. It appears that Western Wireless' proposal would create a regulatory arbi-  
2 trage scenario that could lead to the loss of access revenues. Today, certain calls to  
3 wireless carriers are routed to interexchange carriers. For example, if Venture Cus-  
4 tomer A calls a Western Wireless customer in an exchange where there is no direct  
-5 connection, Venture Customer A incurs a toll charge. However, under Western  
6 Wireless' proposal, it is my understanding that if Venture Customer A calls a West-  
7 ern Wireless customer with a number ported from Venture, Venture Customer A  
8 would be charged for a local call. Customers may be encouraged to "give up" their  
9 existing wireless numbers and obtain wireline numbers for the sole purpose of port-  
10 ing that number to avoid toll charges. This is not only a bad public policy result,  
11 but also simply a bad faith attempt to avoid an important contract provision upon  
12 which Western has already agreed with our company. It also is very clearly an at-  
13 tempt by Western Wireless to subvert the landline LEC calling areas established by  
14 this Commission that have always been utilized to determine whether landline  
15 originated calls are "local" or "toll" for state regulatory purposes. Western Wire-  
16 less is pressing hard for LNP, but seems to be most interested in avoiding transport  
17 costs and establishing a means by which calls to its service will avoid access charges.  
18 The impact that this will have on local and access rates cannot be overemphasized.

19 Q. Does this conclude your rebuttal testimony?

20 A. Yes.

CERTIFICATE OF SERVICE

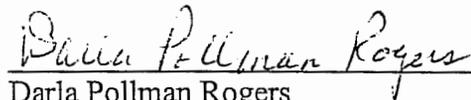

The undersigned hereby certifies that she served a copy of the foregoing **REBUTTAL TESTIMONY** upon the persons herein next designated, on the date below shown, by depositing a copy thereof in the United States mail at Pierre, South Dakota, postage prepaid, in an envelope addressed to each said addressee, to-wit:

**Q: What is your name and address?**

A: My name is John M. De Witte. My business address is 1801 N. Main Street, Mitchell, South Dakota 57301.

**Q: By whom are you employed and in what capacity?**

A: I am the Vice President of Engineering of Vantage Point Solutions, Inc. (VPS). VPS is a telecommunications engineering and consulting firm in Mitchell, South Dakota with a full-time staff of 52 employees. Our client base of VPS is made up of rural independent Local Exchange Carriers (LECs). I focus on assisting the small LECs with nearly all technical and financial aspects of their operations. My direct staff of 13 and I have provided engineering, financial, and regulatory services to many of the South Dakota LECs, as well as LECs in several other states.

**Q: What is your educational and business background?**

A: I received a Bachelors of Science in Computer Engineering (1982) from Iowa State University (Ames, IA) and a Masters of Business Administration (1992) from Kennesaw Sate College (Kennesaw, GA). I am a Registered Professional Engineer in South Dakota and 10 other states. I have been active in the telecommunications industry since 1983. Previous to VPS, I worked for Martin Group, Inc., based in Mitchell, South Dakota. At Martin Group, I was Assistant Director of Engineering of the Telecom Consulting and Engineering Business Unit, providing engineering and consulting services to rural telecommunications providers throughout the nation. Prior to this, I worked in a variety of engineering, marketing, and management positions at Nortel Networks,

1 Inc., a telecommunications equipment manufacturer in Raleigh, NC and Atlanta,  
2 GA. I am a regular speaker at many state, regional, and national telephone com-  
3 pany organization events, including the National Telephone Cooperative Associa-  
4 tion (NTCA) and the Organization for the Promotion and Advancement of Small  
5 Telecommunications Companies (OPASTCO). In this capacity, I often advise tele-  
6 phone company managers and board members regarding a variety of technical and  
7 financial issues.

8 **Q: On whose behalf are you testifying in this proceeding?**

9 A: My direct pre-filed testimony is submitted on behalf of Venture Communications  
10 Cooperative.

11 **Q: What is the purpose of your testimony?**

12 A: I will provide testimony on technical and cost issues of implementing intermodal  
13 LNP that is pertinent to this hearing.

14 **Q: Are you familiar with current telephone network technologies, including**  
15 **switching equipment, transmission equipment, and outside plant architec-**  
16 **tures?**

17 A: I have provided engineering and consulting services to more than 100 rural LECs  
18 across the United States. I am familiar with nearly all of the technologies and archi-  
19 tectures of a rural LEC network, including transport equipment, switching equip-  
20 ment, digital loop carrier equipment, broadband networks, along with copper and  
21 fiber outside plant cable. I have engineered both landline networks and wireless  
22 networks for my clients.

1 **Q: Do you understand the various methods and requirements that are required to**  
2 **support Intramodal (wireline to wireline or wireless to wireless) and Intermo-**  
3 **dal (wireline to wireless) Local Number Portability?**

4 A: Yes I do.

5 **Q: With the number of variants for LNP, which implementation of LNP is the fo-**  
6 **cus of your testimony?**

7 A: In general, the methodologies, rules, and implementation processes for wireline In-  
8 tramodal LNP are clearly defined, have been in place for several years, and are  
9 widely deployed. The methodologies, rules, and implementation processes for In-  
10 termodal (wireline to wireless) LNP and wireless Intramodal LNP have only been  
11 in place since November 2003. Intermodal LNP relating to wireline to wireless  
12 ports will be the focus of my direct testimony.

13 **Q: What unique challenges are presented to a rural Independent Local Exchange**  
14 **Carrier (ILEC) with the implementation requirements of Intermodal LNP?**

15 A: There are several technical and economic issues facing rural ILECs as they evaluate  
16 the implementation of Intermodal LNP. These challenges for small rural LECs  
17 concern the interconnection of wireless and wireline networks for the purposes of  
18 implementing Intermodal LNP. The Petitioner does not have existing direct points  
19 of connection to wireless carriers' networks in many of the rate centers it serves.  
20 Where there are no direct points of connection with the wireless carriers, only con-  
21 ventional, switched toll routes remain; but no translating, routing, rating or cost re-  
22 covery rules are in place. Some of the questions that need to be addressed include:  
23 (1) where and how should the Petitioner interconnect with the wireless carriers, (2)

1 is the point of interconnection within the LATA, and (3) how will the Petitioner be  
2 able to maintain the original rate center designation and rating when the number is  
3 ported to a point of interconnection that is located outside the original rate center,  
4 when the wireless service area and the Petitioner's service area vary greatly. These  
5 issues are unique in rural areas, such as the Petitioner's service area, where few, if  
6 any interconnection arrangements exist and there are fewer subscribers in compari-  
7 son to metropolitan areas over which to spread the costs of Intermodal LNP. The  
8 uncertainty surrounding these and other questions are likely to cause significant  
9 customer confusion, complaints to the Petitioner and the SDPUC, and the resulting  
10 perception of degraded customer service on the part of the Petitioner's members.  
11 Venture has not received a LNP request from a wireline competitive local exchange  
12 carrier (CLEC); therefore Venture has not previously implemented LNP. As a re-  
13 sult, numerous upgrades in software and operational procedures will be required in  
14 order to meet the Intermodal LNP requirements, which will benefit only those few  
15 subscribers that choose to leave Venture, while encumbering the entire remaining  
16 subscribers with the burden of funding the porting benefit. In addition, current im-  
17 plementation rules do not provide the necessary competitive playing field to allow  
18 wireless subscribers to port to Venture's wireline services, which could benefit a  
19 portion of the Petitioner's subscribers.

20 **Q: What are the anticipated costs of implementing Intermodal LNP?**

21 A: The anticipated costs of implementing Intermodal LNP can be categorized into four  
22 (4) basic areas: 1) Switching related costs, 2) Number Portability Administration  
23 Center (NPAC) related costs, 3) Administrative/Technical costs and 4) Transport

1 Costs. The LNP Petition filed on behalf of Venture included an Exhibit detailing  
2 the estimated implementation costs for intermodal LNP. This Exhibit is attached as  
3 Exhibit [1]. Each of the cost elements in these categories will be identified in the  
4 following paragraphs.

5 Switching Related Costs

6 The cost elements in this category include switching generic software upgrades,  
7 LNP software features, prerequisite software features to support the LNP features,  
8 any requisite switch hardware to support the operation of the LNP software, switch  
9 vendor installation costs, vendor software activation fees, and maintenance ex-  
10 penses attributable to LNP. As part of the cost estimates provided with the Venture  
11 Waiver Petition, the cost estimates for this category are detailed as follows:

12 LNP Hardware Requirements

13 Venture utilizes a Nortel Networks (Nortel) DMS-10 as its wireline switching plat-  
14 form. Venture has verified with Nortel that the existing DMS-10 configuration  
15 does not require any hardware additions to support the activation of LNP software.  
16 Therefore, Venture did not claim any non-recurring or recurring cost estimates for  
17 LNP hardware as part of its estimated costs.

18 LNP Software Features

19 According to oral conversations with Nortel, the Venture DMS-10s currently have  
20 the generic software load that will support LNP. The LNP software features have  
21 not been activated in Venture's DMS-10s. Based on LNP pricing estimates from  
22 Nortel Networks, the non-recurring cost estimate for the LNP Basic software fea-  
23 ture for DMS-10 switches is \$4 per equipped line, which amounts to \$68,700 for

1 Venture. Nortel does not charge a recurring Right-To-Use (RTU) fee for these fea-  
2 tures. Based on the information provided by Nortel, Venture claimed \$68,700 for  
3 LNP software features and did not claim any recurring cost estimates for LNP soft-  
4 ware as part of its estimated costs.

#### 5 Additional Software Features

6 Venture has verified with Nortel that the existing DMS-10 configuration does not  
7 require any pre-requisite software additions to support the activation of LNP soft-  
8 ware. However, if Directory Number Pooling is implemented in South Dakota for  
9 LNP, additional software features will require activation. Therefore, Venture  
10 claimed \$4,000 in non-recurring costs for this feature as part of its estimated costs.

#### 11 Additional Vendor Fees

12 Venture participates in Nortel's annual software upgrade program (Nortel's SR-10  
13 program). As a result, Nortel will activate the LNP software feature bits in Ven-  
14 ture's DMS-10 switching systems at no charge. Venture plans to use RUS funding  
15 for the LNP software charges if they are ultimately required as a result of this hear-  
16 ing. The processing of the RUS paperwork for the LNP software features is esti-  
17 mated at \$5,000. Due to this activity, Venture claimed as a Non-Recurring Addi-  
18 tional Software Fee an estimated \$5,000 charge required for feature activation.

#### 19 Initial LNP Translations

20 There are several activities that are required to initially set up and test the basic  
21 translations for LNP. The non-recurring initial translations cost estimates were  
22 based on the anticipated fees to data-fill and test basic LNP functionality in the Peti-  
23 tioner's switching system. This testing includes coordination of testing with the

1 SOA provider, coordination of testing with any transiting carriers, verification of  
2 proper LNP dip activities, verification of billing system interaction, and other trans-  
3 lations activities. This cost estimate is approximately \$72,000. In order to allow  
4 time for coordination of testing with other entities, it is assumed that the initial  
5 translations testing will require approximately one (1) man-week of translations ac-  
6 tivities by a 3<sup>rd</sup> party technical consultant for each of its sixteen (16) host switches,  
7 at a loaded hourly rate of \$100 per hour. The remaining portion of this cost esti-  
8 mate includes travel, living and other miscellaneous expenses.

9 Technical Implementation and Testing

10 There are several activities that are required to initially set up and test the basic  
11 translations for each CMRS carrier requesting Intermodal LNP. The non-recurring  
12 technical implementation and testing cost estimates were based on the anticipated  
13 fees to data-fill and test specific Intermodal LNP functionality in the Petitioner's  
14 switching system. The non-recurring technical implementation and testing cost es-  
15 timates were based on performing number porting tests individually associated with  
16 each CMRS to ensure that the ported number route correctly flows through the Peti-  
17 tioner's network. As the FCC has not required a formal Interconnection Agree-  
18 ment, it is assumed that the Petitioner will be responsible for performing these tests  
19 in order to ensure proper call routing. The cost estimate is based on 24 hours of  
20 testing at \$100 per hour for each appropriate exchange by a 3rd party resource and  
21 includes travel and living expenses.

1        NPAC Related Costs

2        The cost elements in this category include Service Order Administration (SOA)  
3        costs, LNP Query costs, and connection costs with the LNP database. As part of  
4        the cost estimates provided with the Venture Waiver Petition, the cost estimates for  
5        this category are detailed as follows:

6        Service Order Administration

7        As part of the LNP implementation process, the Petitioner must select a provider to  
8        administer updates to the Number Portability Administration Center (NPAC) LNP  
9        database. In anticipation of reduced porting intervals in the future, the Petitioner  
10       has elected to include the costs for an automated SOA system. The SOA cost esti-  
11       mates were based a compilation of SOA services price lists from several firms pro-  
12       viding automated SOA services. These cost estimates represent the anticipated  
13       start-up costs and recurring costs levied by the SOA provider to utilize its auto-  
14       mated services to update the LNP databases. The sample pricing scenarios were  
15       obtained under Non Disclosure Agreement (NDA) from several SOA services pro-  
16       viders. As the Petitioner has not entered into any contracts with these or any SOA  
17       entities, firm pricing cannot be provided. As an estimate, the non-recurring SOA  
18       costs were assumed to be \$1,800 with the recurring SOA costs assumed to be  
19       \$3,600. Should the Petitioner enter into a contract with an automated SOA pro-  
20       vider, these cost estimates can be revised.

21       LNP Query Charges

22       With the implementation of LNP, the Petitioner will incur charges for each LNP  
23       query launched for its subscribers. The LNP query cost estimates were based on a

1 compilation of SOA services price lists from several firms providing automated  
2 SOA services. The sample pricing scenarios were obtained under NDA from sev-  
3 eral SOA Services providers. As the Petitioner has not entered into any contracts  
4 with these or any SOA entities, firm pricing cannot be provided. The non-recurring  
5 LNP Query cost estimate represents the anticipated start-up costs levied by the SOA  
6 provider to utilize its services to dip its database. This initial set-up charge is as-  
7 sumed to be \$500. The recurring LNP Query cost estimates were based on the as-  
8 sumption that each of the Petitioner's access lines would generate five (5) to six (6)  
9 call attempts per day; each of the call attempts would generate an LNP query. The  
10 query charge is assumed to range between \$0.001 and \$0.0005 per query. Based on  
11 these assumptions, the recurring LNP Query charge was assumed to be \$1,560.  
12 Should the Petitioner enter into a contract with an automated SOA provider, these  
13 cost estimates can be revised.

#### 14 Connection Costs w/LNP Database

15 With the implementation of LNP, the Petitioner will incur set-up charges levied by  
16 the SOA provider to enter its NECA Operating Company Number (OCN) and Point  
17 codes for each switch launching LNP queries to the SOA's LNP database. The  
18 non-recurring connection costs with LNP database estimate was based on a compi-  
19 lation of SOA services price lists from several firms providing automated SOA ser-  
20 vices. The sample pricing scenarios were obtained under NDA from several SOA  
21 Services providers. As the Petitioner has not entered into any contracts with these  
22 or any SOA entities, firm pricing cannot be provided. The cost estimate for this  
23 element was estimated at \$2,400 assuming a maximum of sixteen (16) point codes

1 at \$150 per point code. Should the Petitioner enter into a contract with an auto-  
2 mated SOA provider, this cost estimate can be revised.

### 3 Technical and Administrative Costs

4 The cost elements in this category include testing and verification of each ported  
5 DN, translations for each ported DN, administrative cost estimates, regulatory cost  
6 estimates, customer care cost estimates, and marketing cost estimates. As part of  
7 the cost estimates provided with the Venture Waiver Petition, the cost estimates for  
8 this category are detailed as follows:

#### 9 Testing and Verification of Each Ported Dial Number

10 This cost estimate addresses the anticipated activities to test each “ported out” di-  
11 rectory number (DN) to verify the proper routing of the DN. The recurring Test-  
12 ing/Verification cost estimates were based on one (1) hour per port at the Peti-  
13 tioner’s loaded technical labor costs of \$46 per hour.

#### 14 Per Port Translations

15 This cost estimate addresses the anticipated translations activities to “port out” each  
16 DN. The recurring translations cost estimate was based on \$50 per port.

#### 17 Administrative Costs

18 The implementation of LNP will require Venture to implement new administrative  
19 policies and procedures. The non-recurring administrative cost estimates were  
20 based on providing LNP process training for the Petitioner’s administrative person-  
21 nel. The training is assumed to be provided by the entity providing automated SOA  
22 services. The Petitioner has not selected a SOA provider at this time. The non-  
23 recurring costs estimates are based on a one-week onsite customer service represen-

1 tative training class, including the instructor's travel and living expenses. This cost  
2 is assumed to be \$8,000. The recurring administrative cost estimate addresses the  
3 anticipated administrative activities required with entry of the ported number into  
4 the SOA system. The recurring administrative cost estimates were based on two  
5 and one half (2.5) hours per port at the Petitioner's loaded administrative labor costs  
6 of \$41 per hour.

#### 7 Regulatory Costs

8 This cost element is associated with the Petitioner's Legal Fees and Regulatory  
9 Consulting fees. The legal fees are associated with the Petitioner's attorneys. The  
10 anticipated fees are associated with reviewing the legal aspects of LNP filings and  
11 LNP implementation. The regulatory consulting fees are typically associated with  
12 the updates required to various National databases (NECA Tariff 4, Telcordia  
13 LERG, etc.) and the possible assistance with the completion of the NECA End User  
14 Charge worksheets. This cost is estimated at 100 hours at an average rate of \$150  
15 per hour and includes travel, living, and miscellaneous expenses. Based on the le-  
16 gal activities required to implement LNP, the Petitioner may revise this figure at a  
17 later date.

#### 18 Customer Care Costs

19 The implementation of LNP will require Venture to implement new customer care  
20 policies and procedures. The non-recurring customer care cost estimates were  
21 based on providing LNP customer care training for the Petitioner's administrative  
22 personnel. The training is assumed to be provided by the entity providing the Peti-  
23 tioner's billing platform services. The Petitioner has not developed the Customer

1 Care and Billing processes for LNP at this time. The costs estimates are based on a  
2 one-week onsite Operational Support Services (OSS) training class. The recurring  
3 customer care cost estimates were based on one-half (1/2) hour per port at the Peti-  
4 tioner's loaded customer care labor costs of \$46 per hour. This cost estimate ad-  
5 dresses the anticipated administrative activities required with updating the Peti-  
6 tioner's customer care and billing system and to track the "ported out" DNs.

### 7 Marketing and Informational Flyer Cost Estimates

8 The implementation of LNP will likely generate subscriber confusion from the ad-  
9 dition of an End User Charge for the implementation of LNP. The Petitioner plans  
10 to develop an informational flyer to help educate the subscriber base by explaining  
11 LNP and the reasons for the proposed LNP End User Charge appearing on the sub-  
12 scribers' monthly local service bill. The non-recurring marketing and informational  
13 flyer cost estimates were based on the costs required to develop an informational  
14 flyer and billing insert explaining LNP and any end-user fees that may apply. The  
15 total non-recurring estimated costs in this category were expressed as a "per access  
16 line" cost and were estimated at approximately \$2.00 per subscriber. This cost es-  
17 timate includes the development of the explanatory LNP text, the graphic design  
18 artwork, and first run printing costs. The recurring marketing and informational  
19 flyer cost estimates were based on \$1.00 per subscriber per year for volume print  
20 costs, handling, and mailing the periodic flyer/bill insert. This recurring market-  
21 ing/informational flyer cost estimate was amortized over 12 months to arrive at an  
22 estimated monthly fee for the Cost Exhibit.

23

1        Billing/Customer Care Software Updates

2        The Petitioner's billing and customer care system will require software upgrades to  
3        support LNP. The non-recurring billing and customer care software upgrade cost  
4        estimates represents the anticipated costs to upgrade the Petitioner's billing system  
5        to accommodate LNP functionality. This upgrade was estimated as an allocated  
6        cost of the Petitioner's annual billing system upgrade.

7        Transport-Related Cost Estimates

8        The cost elements in this category include the estimated costs of transport to con-  
9        nect the Petitioner's exchange with the CMRS carriers, anticipated cost estimates  
10       for transiting CMRS connections, and anticipated cost estimates for pass-through  
11       N-1 Tandem LNP queries. As part of the cost estimates provided with the Venture  
12       Waiver Petition, the cost estimates for this category are detailed as follows:

13       Transport Cost Estimates

14       The Petitioner will require direct Type 2B DS1 transport facilities from the Peti-  
15       tioner's exchange to each CMRS provider's Point of Interconnection (POI) for  
16       those CMRS carriers requesting intermodal LNP. The Petitioner does not possess  
17       POI information for each CMRS carrier. The non-recurring wireless carriers POI  
18       cost estimates represent the costs associated with providing a Type 2B DS1 span to  
19       each CMRS provider. As stated in the Petition, the Petitioner assumes interconnec-  
20       tion will be required with five (5) CMRS carriers. The Petitioner estimates that the  
21       non-recurring transport costs for each CMRS will be approximately \$4,000 per ex-  
22       change. This cost estimate includes the switch DS1 interface hardware and support-  
23       ing equipment required to place a Type 2B DS1 span into service. The recurring

1 wireless carriers POI cost estimates were based on monthly transport lease cost es-  
2 timates. As stated in the Petition, the Petitioner assumes interconnection will be re-  
3 quired with five (5) CMRS carriers. The cost estimate relating to the recurring  
4 transport costs for each Type 2B DS1 will be approximately \$1,990 per month,  
5 based upon a verbal estimate obtained from SDN Communications. Venture plans  
6 to revise this recurring transport cost estimate once POI information is provided by  
7 the CMRS carriers and firm pricing can be provided by a transport provider (such  
8 as SDN Communications or Qwest).

9 Mobile Telephone Switching Office (MTSO) POI Connection Cost Estimates

10 The Petitioner does not possess POI information for the CMRS carriers that have or  
11 will likely to provide a Bona Fide Request (BFR) to the Petitioner for intermodal  
12 LNP. The possibility exists that a transiting carrier (such as Qwest or SDN Com-  
13 munications) may establish DS1 connections with one or more of the CMRS carri-  
14 ers. The MTSO POI connection cost estimates represent the anticipated costs for  
15 the Petitioner's share of this connection, if required. The non-recurring MTSO POI  
16 connection cost estimates were based on an estimate of the start-up costs to utilize a  
17 transiting carrier for CMRS MTSO connections, if required. The recurring MTSO  
18 POI connection cost estimates were based on the Petitioner's anticipated share of  
19 monthly lease for the transiting carrier MTSO POI connection cost estimates, if re-  
20 quired. If the CMRS carriers elect to directly connect with the Petitioner (without a  
21 transiting carrier) on a direct Type 2B connection to the CMRS' Mobile Switching  
22 Telephone Office (MTSO), these cost estimates will likely be not applicable.

23

1 Transiting Non-Recurring Dip (Minimum) Cost Estimates

2 This cost estimate was based on the assumption that the transiting carrier may need  
3 to perform some LNP queries when the Petitioner's N-1 carrier fails to do so. The  
4 transiting non-recurring dip cost estimate describes the anticipated costs of the non-  
5 recurring set-up charges to enable the Petitioner to receive dip charges from a tran-  
6 siting carrier, such as SDN Communications. The initial setup charges are likely to  
7 be passed on to Petitioner. Venture has estimated this cost to be \$500. The transit-  
8 ing carrier recurring dip cost estimates describe the anticipated costs of the mini-  
9 mum dip charges from a transiting carrier. These charges are likely to be passed on  
10 to Petitioner. Venture has estimated this cost estimate to be \$100 per month. If the  
11 CMRS carriers elect to directly connect with the Petitioner (without a transiting car-  
12 rier) on a direct Type 2B connection to the CMRS' Mobile Switching Telephone  
13 Office (MTSO), these cost estimates will likely be not applicable.

14 **Q: It appears that one of the larger estimated costs projected for the implementa-**  
15 **tion of Intermodal LNP relates to transport costs. What considerations con-**  
16 **cerning compensation for transport costs are applicable to the implementation**  
17 **of Intermodal LNP?**

18 A: With regard to the direct Type 2B connections to the wireless carriers described in  
19 the preceding cost estimates, these cost estimates are identified as required connec-  
20 tions to allow Intermodal LNP to function correctly within the Petitioner's existing  
21 billing and customer care systems.

22 **Q: If no direct Type 2B DS1 facilities are available for interconnection with the**  
23 **CMRS carriers, what happens for Venture?**

1 A: Without direct Type 2B facilities, the ported calls will be routed based on the Local  
2 Routing Number (LRN) delivered with the LNP query. The LRN will contain the  
3 NPA-NXX of the wireless carrier. Based on this NPA-NXX, these calls will be  
4 routed as toll calls over Venture's existing toll routes to Venture's Access Tandem  
5 (SDN Communications).

6 **Q: In your opinion, are the proposed Type 2B DS1 facilities to each CMRS carrier**  
7 **cost justified?**

8 A: Without actual traffic data, it is impossible to determine the feasibility of a particu-  
9 lar facility. However, based on the anticipated traffic levels generated by the pro-  
10 jected intermodal LNP ports, it appears that the construction of these facilities is not  
11 cost-justified. If the facilities were feasible, it is likely that the wireless carriers  
12 would have implemented them already as they have in other areas. Based on the  
13 projected traffic levels, it appears that the direct facilities between Petitioner and the  
14 wireless carriers required for LNP would be highly under-utilized and very ineffi-  
15 cient.

16 **Q: It appears that some of the anticipated cost estimates are based on the quantity**  
17 **of anticipated numbers that would be ported to a CMRS carrier. How was the**  
18 **number of ports determined?**

19 A: The quantity of projected ports is a function of the competitive environment in the  
20 proposed service area, the number of CMRS carriers, and other statistical data.  
21 The data that is currently available concerning porting activity for CMRS carriers  
22 on a wide-scale basis is limited. It is my understanding that no Petitioner cus-  
23 tomer has ever made an inquiry to Petitioner regarding LNP or a request for LNP.

1 With respect to wireless LNP nationwide, to date, the demand for wireless porting  
2 has been far less than expected and most ports have been from one wireless car-  
3 rier to another. Wireline to wireless porting appears to be a small fraction of  
4 wireless porting in general.<sup>1</sup> According to NeuStar, 95% of wireless ports have  
5 been from one wireless carrier to another and only 5% of wireless ports were be-  
6 tween wireline and wireless carriers.<sup>2</sup> With lack of ubiquitous quality and incom-  
7 plete coverage of the Petitioner's existing service area by the existing wireless  
8 carriers, I believe that the percentage would be even smaller than in other more  
9 urban parts of the nation. For purposes of the cost exhibit, approximately two (2)  
10 intermodal ports per month were estimated,<sup>3</sup> which is well under the five (5) per-  
11 cent of the Petitioner's access lines. Accordingly, there appears to be little, if any,  
12 demand for LNP and, absent such demand, no public benefit will be derived from  
13 LNP. Even if some level of LNP demand develops in the future, the total imple-  
14 mentation costs that would be incurred by Petitioner to implement and maintain  
15 LNP would require re-evaluation based on the customer demand, quantity of  
16 ports, and the revised estimated costs for the required LNP infrastructure ele-  
17 ments.

18 **Q: Will any of the Petitioner's estimated costs change if the number of estimated**  
19 **ports is changed?**

---

<sup>1</sup> See "Survey Finds Little Impact From LNP", *RCR Wireless News*, February 9, 2004 ed., reporting that according to a consumer survey report from CFM Direct, very few telecommunications customers have switched their wireline phone numbers to wireless.

<sup>2</sup> See NARUC Notebook, *Communications Daily*, Vol. 24, No. 46, p. 4 (March 9, 2004)

<sup>3</sup> While actual industry figures are not available, most wireless carriers are currently experiencing a porting rate of between three percent (3%) and six percent (6%). Of these ports, it is estimated that between one percent (1%) and three percent (3%) are intermodal.

1 A: Yes. There are several of the estimated recurring costs that are driven by the num-  
2 ber of ports. These cost elements include the recurring translations costs, the recur-  
3 ring testing and verification of each ported number, the recurring administrative  
4 cost estimates, and the recurring customer care costs. If the projected number of  
5 ports increases, these costs will increase. If the number of projected ports de-  
6 creases, these costs will decrease.

7 **Q: The current porting interval is currently four (4) days. If the porting interval**  
8 **were shortened to two (2) days or less, what effect, if any, would this shortened**  
9 **interval have on the estimated costs?**

10 A: The current industry experience with Intermodal porting is has not been without  
11 implementation issues. Significant problems meeting the current four (4) day port-  
12 ing interval have been reported. Assuming that the implementation issues are re-  
13 fined to the point where a shorter porting interval can be supported, the Petitioner  
14 has included the known cost elements to support a shorter porting interval. The Pe-  
15 titioner has assumed the use of an automated SOA system as part of their antici-  
16 pated LNP implementation costs. An automated SOA system will allow the Peti-  
17 tioner to accommodate an electronic request and acknowledgement for the ported  
18 numbers. Therefore, the Petitioner does not anticipate any increases in its SOA re-  
19 lated non-recurring or recurring cost estimates. It is possible that additional recur-  
20 ring costs in the areas of translations, technical implementation, testing, verifica-  
21 tion, customer care, and administrative would occur if the porting interval were to  
22 be reduced to require that porting activities occur outside of the standard business  
23 day (expedited requests, nights, weekends, and holidays). If porting is required dur-

1 ing these times, additional loaded labor rates will be incurred. If the porting re-  
2 quirements are confined to the standard business day, the Petitioner does not antici-  
3 pate any additional recurring LNP costs. However, it is possible that unforeseen re-  
4 quirements could require additional charges.

5 **Q: Are there any other potential costs that could impact Venture with the imple-**  
6 **mentation of Intermodal LNP?**

7 A: If Venture must implement intermodal LNP, all carriers with EAS arrangements  
8 with Venture and their customers will be impacted because the other carrier will  
9 have to LNP dip all EAS calls. This would increase the cost of EAS between Ven-  
10 ture and the other carrier and could result in a loss of EAS options to the customer  
11 or an increase in the cost of optional EAS service.

12 **Q: Some telecommunications industry analysts have suggested that Foreign Ex-**  
13 **change Service (FX) could be used to provide connections to accommodate in-**  
14 **termodal LNP. Is this a reasonable alternative?**

15 A: There have been industry discussions of using an FX service for Intermodal LNP  
16 interconnection. An FX service is a line appearance that is extended from the  
17 “home” exchange to a “foreign” exchange using dedicated point-to-point facilities.  
18 The FX service is engineered on a per line basis. It is not a common trunk that can  
19 be used by a carrier for routing purposes. With an FX service, the LEC has cus-  
20 tomers and facilities in one rate center and provides service to customers in another  
21 rate center using the same “home” number block. To do this, facilities are extended  
22 from the LEC rate center to the foreign rate center where the customer resides. It is  
23 important to note that the customer pays for the use of these facilities. The LEC is

1 compensated for their facilities and lost toll revenue through these customer  
2 charges. It is unknown exactly how an ILEC would implement an FX service to  
3 accommodate Intermodal LNP. The exact connectivity, rate elements, and network  
4 configuration for the proposed Intermodal LNP FX service appear to be undefined.  
5 As such, any discussion of using FX as a viable transport alternative for Intermodal  
6 LNP transport is purely speculation.

7 **Q: You have addressed several estimated costs for Intermodal LNP. How would**  
8 **these cost estimates change if the Petitioner must implement only Intramodal**  
9 **(wireline to wireline) LNP?**

10 A: All cost elements would stay the same, but the amount of the cost estimates could  
11 change. It is my understanding that both wireline providers would be in the same  
12 rate center. Accordingly, the primary change in the estimated costs would be in the  
13 area of transport costs. The petitioner estimates that these costs would likely be  
14 significantly reduced. Intramodal LNP has clearly defined processes for the ex-  
15 change of traffic between the respective wireline carriers competing in a clearly de-  
16 fined rate center. In the intramodal LNP cases with which I am familiar, the carri-  
17 ers have entered into an Interconnection Agreement. The Intramodal Interconnec-  
18 tion Agreement addresses the methods and compensation that will be used to estab-  
19 lish interconnection and exchange traffic between the wireline carriers. The com-  
20 pensation for the traffic volumes is typically in the form of reciprocal compensa-  
21 tion. In addition, the recurring costs for testing of each ported number would likely  
22 be reduced since the dialing plans and routing between the carriers will likely not

1 change on a regular basis. The reduction of these costs is dependent upon the vol-  
2 ume of ports. The remaining costs will likely be unchanged.

3 **Q: What would be the timeframe required for the Petitioner to fully implement,**  
4 **test and place Intermodal LNP into commercial service, if required to do so?**

5 A: Please refer to the LNP Implementation Timeline, attached hereto as Exhibit [2].  
6 The Timeline details the individual, inter-dependent tasks necessary to fully imple-  
7 ment Intermodal LNP. They are arrayed in a self-explanatory fashion, showing the  
8 anticipated duration of each task and its relationship to other tasks. The overall du-  
9 ration that results for the Timeline supports that approximately six (6) months  
10 would be required to fully prepare for, implement, test and place Intermodal LNP  
11 into commercial service, as stated in the Venture Waiver Petition. As with any  
12 planning horizon, this timeline does not take into account holidays or other unfore-  
13 seen delays due to Force Majure.

14 **Q: Does this conclude your direct testimony?**

15 A: Yes. I also reserve the opportunity to revise or modify this pre-filed direct testi-  
16 mony at or before the hearing if I receive additional information pertaining to the  
17 issues I presented herein.

Revised May 13, 2004

Federal Communications Commission

Washington, D.C.

June 18, 2004

The Honorable Stan Wise  
President, National Association of Regulatory Utility Commissioners  
Commissioner, Georgia Public Service Commission  
225 Washington Street, S.W.  
Atlanta, GA 30334

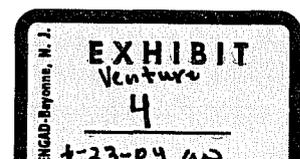

Dear President Wise:

I am writing you, as the president of the National Association of Regulatory Utility Commissioners and representative of NARUC's member commissioners, in connection with requests that small local exchange carriers (LECs) have made to various state commissions for waivers of intermodal number porting obligations.

As you know, the FCC concluded in its *Telephone Number Portability Proceeding* (CC Dkt. No. 95-116) that, by November 24, 2003, LECs generally had to port numbers to wireless carriers where the requesting wireless carrier's coverage area overlaps the rate center with which the customer's wireline number is associated. Wireline carriers that operate in areas outside the 100 largest Metropolitan Statistical Areas had to provide such number porting no later than May 24, 2004. The FCC granted certain LECs serving fewer than two percent of the nation's subscriber lines a limited waiver of the November 24, 2003 deadline until May 24, 2004.

The Commission has emphasized on many occasions the important competitive and consumer benefits of number portability. The Chief of the FCC's Consumer & Governmental Affairs Bureau noted the benefits of wireline-to-wireless porting in his May 6, 2004, letter to you. The Small Business Administration's Office of Advocacy, however, has raised concerns about the possible economic burden that intermodal number porting may place on LECs that are small businesses, particularly those in rural areas. Those concerns may warrant flexibility in evaluating pending waiver requests by small LECs under Section 251(D)(2). Accordingly, and notwithstanding Chief Snowden's letter, I urge state commissions to consider the burdens on small businesses in addressing those waiver requests and to grant the requested relief if the state commissions deem it appropriate. I also request that you share with NARUC's membership this letter encouraging state commissioners to closely consider the concerns raised by small LECs petitioning for waivers.

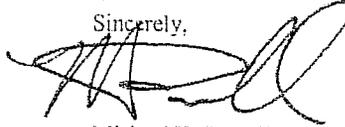

I further urge state commissions, in the course of their deliberations on the pending waiver requests, to encourage parties to develop and submit data relating to the benefits of wireline-to-wireless number portability and the costs of complying with those

obligations, including upgrade costs to the network and routing costs for calls forwarded to carriers. Finally, I encourage parties to submit such information to the FCC for inclusion in our ongoing proceeding in CC Docket No. 95-116 regarding intermodal porting intervals.

Please do not hesitate to call if you would like to discuss these issues further.

Sincerely,

A handwritten signature in black ink, appearing to read 'Michael K. Powell', written over a horizontal line.

Michael K. Powell

DIRECT TESTIMONY OF

STEVEN E. WATKINS

Submitted on behalf of above Rural Local Exchange Carriers and  
the South Dakota Telecommunications Association (May 14, 2004)

1 **I. INTRODUCTION**

2 **Q1: Please state your name, business address and telephone number.**

3 **A:** My name is Steven E. Watkins. My business address is 2120 L Street, N.W.,  
4 Suite 520, Washington, D.C., 20037. My business phone number is (202) 296-9054.

5 **Q2: What is your current position?**

6 **A:** I am Special Telecommunications Management Consultant to the Washington, D.  
7 C. law firm of Kraskin, Moorman & Cosson, LLC, which provides legal and consulting  
8 services to telecommunications companies.

9 **Q3: What are your duties and responsibilities at Kraskin, Moorman & Cosson, LLC?**

10 **A:** I provide telecommunications management consulting services and regulatory  
11 assistance to smaller local exchange carriers ("LECs") and other smaller firms providing  
12 telecommunications and related services in more rural areas. My work involves assisting  
13 client LECs and related entities in their analysis of regulatory requirements and industry  
14 matters requiring specialty expertise; negotiating, arranging and administering connecting  
15 carrier arrangements; and more recently assisting clients in complying with the rules and  
16 regulations arising from the passage of the Telecommunications Act of 1996 (the "Act").

17 On behalf of over one hundred and fifty (150) other smaller independent local exchange  
18 carriers, I am involved in regulatory proceedings in several other states examining a large  
19 number of issues with respect to the manner in which the Act should be implemented in  
20 those states. Prior to joining Kraskin, Moorman & Cosson, I was the senior policy  
21 analyst for the National Telephone Cooperative Association ("NTCA"), a trade  
22 association whose membership consists of approximately 500 small and rural telephone

1 companies. While with NTCA, I was responsible for evaluating the then proposed  
2 Telecommunications Act, the implementation of the Act by the Federal Communications  
3 Commission (“FCC”) and was largely involved in the association's efforts with respect to  
4 the advocacy of provisions addressing the issues specifically related to rural companies  
5 and their customers.

6 **Q4: Have you prepared and attached further information regarding your background  
7 and experience?**

8 **A:** Yes, this information is included in Attachment A following my testimony.

9 **Q5: What is Local Number Portability?**

10 **A:** Local Number Portability (“LNP”) is defined in Section 153 of the Act as:

11  
12 The term “number portability” means the ability of users of telecommunications  
13 services to retain, at the same location, existing telecommunications numbers  
14 without impairment of quality, reliability, or convenience when switching from  
15 one telecommunications carrier to another.

16  
17 This type of number portability is referred to as “Service Provider Portability.”

18 **Q6: What is meant by intermodal porting?**

19 **A:** The term is meant to signify LNP where the number is ported from its prior use by  
20 a wireline telephone company in the provision of “plain old telephone service” (“POTS”)  
21 at a fixed location within a specific geographic area to use by a mobile customer of a  
22 wireless carrier in the provision of mobile service, and vice versa.

23 **Q7: What is meant by intramodal porting?**

1    **A:**            This term means LNP where a number is ported from wireline carrier to another,  
2                    or where a number is ported from one wireless carrier to another, but not when a number  
3                    is ported between two different types of carriers; *i.e.* wireline or wireless.

4    **Q8: Is number porting a “function” or a “service?”**

5    **A:**            It relates to a functional capability of a carrier. It is the capability of a carrier to  
6                    identify the carrier that is providing service to an end user with a specific number. When  
7                    calls are placed to numbers that may have been ported (*i.e.*, the numbers may be used by  
8                    more than one service provider to provide service to end users), number portability is the  
9                    function of querying a database to determine the identity of the carrier that is serving the  
10                   end user using the specific number in question. Once the identity of the carrier is  
11                   determined using number portability hardware and software, a carrier must also determine  
12                   how a call may and will be switched, routed, and completed. Therefore, number  
13                   portability involves multiple functions – the identification of which carrier is serving the  
14                   end user being called and the completion of the call.

15  
16    **II.    PURPOSE OF THIS TESTIMONY**

17    **Q9: On whose behalf are you testifying?**

18    **A:**            I am testifying on behalf of the rural local exchange carriers that are the  
19                    petitioning parties in dockets captioned above (to be referred to as the “Petitioners”) and  
20                    the South Dakota Telecommunications Association.

21    **Q10: What is the purpose of your testimony?**

22    **A:**            My testimony addresses whether grant of the Petitions filed by the Petitioners  
23                    seeking suspension of LNP requirements pursuant to Section 251(f)(2) of the

1 Communications Act of 1934, as amended (“Act”) is in the public interest and consistent  
2 with the criteria regarding economic burdens and feasibility.

3 Consistent with 47 U.S.C. § 251(f)(2)(A)(I), grant of the petitions is necessary to  
4 avoid a significant adverse economic impact on the end users of the Petitioners. As will  
5 be demonstrated, the cost to implement LNP in the rural exchanges of the Petitioners is  
6 significant and would lead to explicit surcharges and other potential rate increases to the  
7 rural users beyond that which would be balanced with any benefit to be derived by the  
8 small number, if any, of users that may actually seek to port their wireline service  
9 telephone numbers. Accordingly, suspension of the LNP requirements would avoid these  
10 burdens consistent with the public interest, convenience, and necessity. *See* 47 U.S.C. §  
11 251(f)(2)(B).

12 Consistent with 47 U.S.C. §§ 251(f)(2)(A)(ii) and (iii) of the Act, grant of the  
13 suspensions is also necessary to avoid the imposition of undue economic burdens and  
14 technically infeasible requirements on the petitioners. My testimony provides  
15 background information that sets forth the sequence of events and unresolved issues at  
16 the FCC regarding LNP. Given the specific network and operational characteristics of the  
17 Petitioners, the LNP requirement, if not suspended, would subject the Petitioners to  
18 adverse economic conditions, unnecessary economic burdens and harm, and potentially  
19 technically infeasible requirements. Accordingly, suspension of the LNP requirements  
20 would be consistent with the public interest, convenience, and necessity in that it would  
21 avoid unnecessary attempts to deploy LNP under conditions that would subject the  
22 Petitioners to undue economic burdens and uncertain and infeasible requirements. *See* 47  
23 U.S.C. § 251(f)(2)(B).

1           Therefore, the interests of all parties, including the Petitioners, their customers,  
2           and policymakers, would be better served by the grant of the suspension requests until  
3           such time as there is a balanced policy result consistent with the public interest. Under  
4           current conditions, there would be no such policy balance between the substantial costs  
5           that would be imposed on the public and the potential benefits of LNP in the rural areas  
6           of South Dakota. Suspension of the LNP requirements is also consistent with sound  
7           public policy because it would assure that the public interest would be examined properly  
8           only after all of the relevant implementation issues have been resolved.

9  
10 **III. RELIEF REQUESTED**

11 **Q11: What relief is appropriate for the Petitioners?**

12 **A:**           The Commission should extend the current interim suspension of the LNP  
13           requirements for the Petitioners until the conditions confronting the Petitioners, as  
14           explained in this Testimony, have changed such that the per-line cost of LNP is more  
15           reasonable compared to whatever demand, if any, may exist. These factors should be  
16           reviewed in light of the criteria set forth in Section 251(b)(2) of the Act.

17           In any event, any consideration under the criteria of Section 251(b)(2) cannot  
18           occur until after the issues pending before the Courts and the FCC related to the apparent  
19           directives contained in the FCC's November 10, 2003 Order on LNP ("*Nov. 10 Order*")  
20           are fully resolved, including any further and final disposition of the remaining rulemaking  
21           issues and the resolution of the routing issues that the FCC explicitly has left to be  
22           resolved later.

23           Regardless of any future consideration, the Petitioners would need sufficient time

1 after the issues are resolved and circumstances may have changed to acquire and install  
2 the necessary hardware and software and to implement the necessary administrative  
3 processes and business relationships that would be necessary to commence LNP.

4 This relief would avoid the potential waste of resources in an attempt to  
5 implement what are currently a confusing, incomplete and inconsistent set of apparent  
6 requirements that cannot be implemented in any rational manner given the status of the  
7 Petitioners' and the wireless carriers' networks. Without suspension, the Petitioners  
8 would find themselves in the untenable position of attempting to implement some  
9 uncertain service and porting method that may require them to incur costs that may go  
10 unrecovered and may subject their subscribers to much higher basic rates. Moreover, as  
11 explained in this testimony, without suspension, customers may receive bills for calls that  
12 they do not expect; some calls may not be completed to their final destination; and there  
13 will be ensuing customer confusion.

1 **IV. BALANCING COSTS AND POTENTIAL BENEFITS WITH THE PUBLIC**  
2 **INTEREST**

3 **Q12: What should the “public interest” determination entail?**

4 **A:** The determination of the “public interest” should involve an evaluation of the  
5 costs of LNP implementation and operation compared to the benefits that LNP  
6 implementation would present for consumers.

7

8 **A. THE COSTS OF LNP ARE SUBSTANTIAL.**

9 **Q13: Are the costs of LNP significant?**

10 **A:** Yes. There are significant costs associated with implementing LNP including the  
11 cost of upgrading switches, accessing the various LNP databases, modifying company  
12 processes and training company employees.

13 **Q14: Who would bear the cost of implementing LNP if the Petitioners were required to**  
14 **do so?**

15 **A:** The subscribers of the Petitioners will bear the costs of LNP either through an  
16 FCC allowed LNP surcharge or through general increases in basic rates. Petitioners may  
17 also be forced to bear some of the cost of implementing LNP to the extent that such cost  
18 may not be recovered from subscribers or other carriers.

19 **Q15: But, did not the FCC establish a cost recovery mechanism for the Petitioners?**

20 **A:** Yes, but that does not address the surcharge and cost recovery burden that would  
21 be placed on the rural users and does not address whether that result would be consistent  
22 with the public interest. These charges would be assessed to all of the Petitioners’ end

1 users regardless of whether any of these end users desire to port numbers to wireless  
2 carriers. The testimony and data provided in this proceeding regarding costs and the  
3 resulting rate implications supports the conclusion that the subscribers of the rural  
4 Petitioners would be shouldering significant rate increases to recover these costs,  
5 regardless of whether any or just a few customers actually port their numbers. This cost  
6 recovery burden would not be balanced with any possible public interest objective given  
7 the lack of demand for LNP and the surcharges that would be imposed to recover the  
8 substantial costs of LNP implementation.

9 **Q16: Are the surcharges and potential basic rate increases to recover the costs of LNP**  
10 **consistent with cost causer principles?**

11 **A:** No. There is an extreme irony here. The very few customers that may want to  
12 port their wireline number from Petitioners to another carrier's service, such as a wireless  
13 carrier's service, will no longer be customers of the Petitioners. The vast majority of  
14 Petitioners' end users that remain will shoulder the charges and costs to the benefit of  
15 only a handful of users that are no longer customers of the LEC. The vast majority of  
16 customers that do not want to port will be forced to foot the bill for the very few that do.

17 **Q17: Will the Petitioners be able to add new customers by porting wireless carriers'**  
18 **customers to the Petitioners' service?**

19 **A:** For the most part, no. The manner in which the FCC put in place intermodal  
20 porting, inconsistent with the reports from the industry workgroup that had been charged  
21 with examining the intermodal issues, means that there is an extreme disparity between  
22 wireline-to-wireless opportunities to port versus wireless-to-wireline. Therefore, for the  
23 most part, Petitioners will be able to lose customers if LNP is implemented, but will not

1 be able to get others back. The necessary methods and rules to allow wireless-to-wireline  
2 porting that would be competitively fair are the subject of a further rulemaking  
3 proceeding before the FCC with no apparent resolution of the geographic disparity issues  
4 that are at the root of the issues. See *Nov. 10 Order* at para. 41-44. In the meantime, a  
5 competitively unfair version of intermodal LNP is in place.

6  
7 **B. THERE IS A LACK OF DEMAND FOR PORTING.**

8 **Q18: Will consumers benefit from the implementation of LNP by Petitioners?**

9 **A:** Central to the evaluation of whether consumers will benefit from the  
10 implementation of LNP is the level of demand that exists for LNP in Petitioners' service  
11 areas. It is my understanding that the Petitioners have not received any inquiries or  
12 requests for LNP. In addition with respect to intermodal portability, in those areas where  
13 intermodal LNP has already been implemented, there appears to be very little demand  
14 from wireline customers to port their numbers to wireless carriers. Rather, the vast  
15 majority of wireless ports appear to be from one wireless carrier to another.

16 **Q19: Does the experience thus far with intermodal LNP have any bearing on the public  
17 interest evaluation?**

18 **A:** Yes. Based on readily available information, the demand for wireline-to-wireless  
19 porting for the non-rural, large local exchange carriers has been small. For example,  
20 according to a March 30, 2004 Press Release from the FCC, for the period between  
21 November 24, 2003 and March 25, 2004, there were 6,640 informal complaints received  
22 regarding wireless LNP. The FCC notes that "most of the complaints concern alleged  
23 delays in porting numbers from one wireless carrier to another" and that a "much smaller

1 number of complaints, estimated at just under ten percent of the total, involve alleged  
2 delays in porting numbers from wireline carriers to wireless carriers.” In any event, the  
3 small relative percentage of complaints is likely due to the small number of wireline-to-  
4 wireless ports. Neustar reports that 95% of wireless ports have been from one wireless  
5 carrier to another and only 5% of wireless ports were between wireline and wireless  
6 carriers. *See Communications Daily, NARUC Notebook, Vol. 24, No. 46, March 9, 2004*  
7 at p. 4.

8 Further, I can also report that the February 9, 2004 online edition of *RCR Wireless*  
9 *News* indicated that there had not been much demand for wireline-to-wireless porting as  
10 may have been initially anticipated. The online publication referenced a consumer survey  
11 report compiled by CFM Direct that found that very few telecommunications customers  
12 have switched their wireline phone numbers to wireless. The article quoted Barry  
13 Barnett, executive vice president of CFM Direct, as stating: “Phone portability should  
14 have enticed more landline users to switch to wireless, and although the data we have  
15 doesn’t look at pre-teens, the owners of landline phones are primarily adults. We don’t  
16 see adults making the shift.”

17 While these anecdotes are representative of the experience in the more urban, top  
18 100 MSAs, I would expect the interest in rural areas to be even less. Wireless service is  
19 less ubiquitous in rural areas, and landline users would be more reluctant to abandon  
20 dependable wireline service for a wireless service of less certainty. Generally, for  
21 obvious reasons, users do not abandon their wireline service, in any event, upon their first  
22 use of wireless service in rural areas.

23 Therefore, as a result of the very limited perceived demand for intermodal LNP

1 experienced to date, the significant and higher costs for the smaller carriers, let alone the  
2 technical and operational hurdles and unresolved issues, requiring the Petitioners to rush  
3 to support LNP for intermodal purposes at this point lacks a balanced public interest  
4 benefit. The public interest demands a balanced and thoughtful approach here, which the  
5 grant of the suspension request will allow.

6 **Q20: Can you explain why there is relatively little demand for intermodal LNP?**

7 **A:** Yes. In my opinion, the nature of wireless service in the rural areas of  
8 states like South Dakota is such that the public does not recognize wireless service as an  
9 absolute substitute for wireline service. The quality of service, dependability, and service  
10 record of wireline service makes it the reliable source that rural customers want and  
11 depend on as their fundamental service. On the other hand, as I expect the Commission is  
12 aware from its own experience here in South Dakota, wireless service is not as  
13 ubiquitous, lacks predictable capacity and quality of service, has a lower probability of  
14 call completion, and suffers from dropped calls. All of these factors mean that rural users  
15 who must depend on quality, reliable service due to their remote locations are not going  
16 to abandon their wireline service and convert to mobile service for actual use in their rural  
17 communities. Their demand for wireless service is more for its mobile capability, and  
18 this mobile capability is in addition to their fundamental need for a reliable wireline  
19 phone. For these reasons, mobile wireless service is a complementary service, not a  
20 replacement.

21 Therefore, while some customers may try wireless service, decide that it is  
22 dependable enough, and subsequently drop their wireline service, they do not do so in a  
23 single step, and do not do so with the need to port numbers. In other words, where a

1 customer drops wireline service, it does so without the need to port a number. More  
2 likely, the number of wireline subscribers that will drop wireline service in rural areas and  
3 replace it solely with wireless service would be expected to be very small.

4 My conclusions about lack of demand for wireline-wireless LNP are consistent  
5 with the FCC's own analysis and statements. In July 2003, the FCC concluded that even  
6 though there continues to be increased interest in wireless service:

7  
8 only a small percent of wireless customers use their wireless phones as their only  
9 phone, and that relatively few wireless customers have "cut the cord" in the sense  
10 of canceling their subscription to wireline telephone service.

11  
12 *Eighth Report, In the Matter of Implementation of Section 6002(b) of the Omnibus*  
13 *Budget Reconciliation Act of 1993 Annual Report and Analysis of Competitive Market*  
14 *Conditions With Respect to Commercial Mobile Services, released July 14, 2003, at para.*  
15 *102.*

16 Moreover, the FCC concluded in August 2003 that:

17  
18 . . . despite evidence demonstrating that narrowband local services are widely  
19 available through [Commercial Mobile Radio Service or "CMRS"] providers,  
20 wireless is not yet a suitable substitute for local circuit switching. In particular,  
21 only about three to five percent of CMRS subscribers use their service as a  
22 replacement for primary fixed voice wireline service . . . . Lastly, the record  
23 demonstrates that wireless CMRS connections in general do not yet equal

1 traditional landline facilities in their quality and their ability to handle data traffic.

2  
3 *See Report and Order and Order on Remand and Further Notice of Proposed*  
4 *Rulemaking, Review of the Section 251 Unbundling Obligations of Incumbent Local*  
5 *Exchange Carriers; Implementation of the Local Competition Provisions of the*  
6 *Telecommunications Act of 1996; and Deployment of Wireline Service Offering*  
7 *Advanced Telecommunications Capability, CC Docket Nos. 01-338, 96-98, and 98-147,*  
8 *FCC 03-36, released August 21, 2003, at para. 445.*

9 Finally, consistent with these FCC findings, a 2004 Policy Bulletin of the Phoenix  
10 Center for Advanced Legal & Economic Public Policy Studies entitled “Fixed-Mobile  
11 ‘Intermodal’ Competition in Telecommunications: Fact or Fiction?” also comes to the  
12 same conclusions. *See* [www.phoenix-center.org/PolicyBulletin/PCPB10Final.doc](http://www.phoenix-center.org/PolicyBulletin/PCPB10Final.doc). While  
13 the fundamental discussion in the Policy Bulletin is related to the extent of competition  
14 with Bell Operating Companies, the bulletin concludes at p. 1 that wireline and wireless  
15 telephone services are not “close enough substitutes to be effective intermodal  
16 competitors” and at p. 2 that “even though there may be exceptions, consumers generally  
17 do not consider the two services as sufficiently good substitutes . . . .”

18 For all of these reasons, the complementary nature of wireless service means that  
19 very few, if any, wireline customers will want to take the single step, at the same time, of  
20 abandoning wireline service, porting their number to wireless, and take a chance that they  
21 will depend on wireless service. Accordingly, it is not in the public interest for society,  
22 and particularly the rural subscribers of the Petitioners, to incur the cost of implementing  
23 LNP and to divert the limited resources of the Petitioners which are already challenged by

1 their service to sparsely populated areas and relatively lower income customers, for such  
2 small, if any, demand and such a speculative and abstract objective.

3 **Q21: Do the benefits of LNP justify the cost in the cases before the Commission?**

4 **A:** No. Because the facts show that there is little or no demand for LNP, the  
5 significant costs of LNP cannot be justified.

6  
7 **V. OTHER UNRESOLVED IMPLEMENTATION ISSUES RELATED TO THE**  
8 **PUBLIC INTEREST EVALUATION.**

9 **Q22: Are there additional reasons why LNP is not in the public interest?**

10 **A:** Yes. There are other unresolved issues associated with the ultimate routing of  
11 calls to telephone numbers ported to wireless carriers that are relevant to the evaluation  
12 here. Moreover, in the *Nov. 10 Order*, the FCC asked for further comment on whether  
13 the porting interval should be reduced and on how to implement wireless to wireline  
14 LNP. The resolution of these issues is unknown, the manner in which each will be  
15 resolved will further affect the Petitioners and their end users and could require  
16 Petitioners to incur additional costs in connection with LNP. Accordingly, the resolution  
17 of these issues could further impact the LNP cost/benefit analysis.

18 **Q23: Did the FCC's *Nov. 10 Order* on intermodal number portability reconcile the facts of**  
19 **rural LECs with the requirement to provide intermodal LNP when there is no**  
20 **service arrangement with the wireless carrier "in the same location?"**

21 **A:** No. The FCC's *Nov. 10 Order* is, at best, incomplete in that it fails to address  
22 with clarity and completeness the fact that there may be no wireless carrier arrangements

1 in place “at the same location” (which is the situation confronting most of the  
2 Petitioners), the obvious “location portability” aspect of mobile service, or the remaining  
3 rate center disparity issues articulated by the industry workgroup discussed below. Many  
4 of the FCC’s statements in its recent orders on number portability with respect to service  
5 locations of wireline LECs, rate center areas, the geographic scope of the operations and  
6 service offerings of wireless carriers, and mobile users are inexplicably inconsistent with  
7 the facts confronting the Petitioners, previous FCC conclusions, and existing regulation.

8  
9 **A. ROUTING ISSUES**

10 **Q24: Do the unresolved and uncertain aspects of the intermodal number portability**  
11 **requirements cause real world implementation consequences for the Petitioners?**

12 **A:** Yes. The *Nov. 10 Order* does not automatically create service arrangements  
13 between the Petitioners and the wireless carriers. The *Nov. 10 Order* does not clearly  
14 answer questions about the manner in which calls to ported numbers of mobile users will  
15 be treated from a service definition basis, how such calls will be transported to locations  
16 beyond the LECs’ service territories, and over what facilities these calls will be routed.

17 **Q25: What are the so-called “routing” issues?**

18 **A:** Foremost, the wireless carrier to which the number may be ported may not have  
19 any existing service arrangements with the wireline LEC in the specific geographic area  
20 where the wireline LEC provides service using that number (*i.e.*, in the geographic area  
21 that constitutes “the same location”). Accordingly, even if the carriers knew that the  
22 number had been ported to a wireless or wireline carrier providing service in another  
23 location, there would not be any trunking arrangement in place (other than handing off

1 the calls to interexchange carriers) to complete the call. No LEC, including the  
2 Petitioners, has network arrangements for the delivery of local exchange service calls to,  
3 and the exchange of telecommunications with, carriers that operate at distant locations  
4 beyond the LEC's actual service area in which local exchange service calls originate, and  
5 there is no requirement for LECs to establish such extraordinary arrangements. LECs  
6 have no obligation to provide at the request of a wireless carrier, at additional cost and  
7 expense to the LEC, some extraordinary form of local exchange service calling beyond  
8 that which the LEC provides for any other local exchange service call.

9 **Q26: Would you provide an explanation of some of the uncertain aspects of the FCC's**  
10 ***Nov. 10 Order* with respect to so-called "routing" issues?**

11 **A:** The *Nov. 10 Order* neglects to address specific operational and network  
12 characteristics of the smaller LECs such as the Petitioners. In this regard, I note the  
13 statement of the FCC in a subsequent November 20, 2003 Order on number portability  
14 denying a petition challenging the decision:

15  
16 . . . [P]etitioners assert that there is no established method for routing and billing  
17 calls ported outside of the local exchange. We note that today, in the absence of  
18 wireline-to-wireless LNP, calls are routed outside of local exchanges and routed  
19 and billed correctly.

20  
21 What the FCC fails to understand in this statement is that calls routed outside of the  
22 Petitioners' local exchanges are routed to interexchange carriers (IXCs). Therefore, they  
23 are routed and billed correctly as interexchange calls. The Petitioners do not have any

1 obligation to provision local exchange carrier services that involve transport  
2 responsibility or network functions beyond their own networks or beyond their incumbent  
3 LEC service areas. Consequently, if the FCC means to presume that calls outside of the  
4 local exchanges are routed and billed correctly as local calls, the FCC's statement  
5 contained in the second sentence is simply not correct.

6 Furthermore, it is well settled that LECs' interconnection obligations only pertain  
7 to their own networks, not to other carriers' networks or to networks in areas beyond their  
8 own LEC service areas. While the FCC has generally acknowledged a limitation on a  
9 Bell company to route calls no further than to a LATA boundary, the FCC's *Nov. 10*  
10 *Order* apparently failed also to recognize that the Petitioners are physically and  
11 technically limited to transporting traffic to points of interconnection on their existing  
12 network that are no further than their existing service territory boundaries. It is my  
13 understanding that some companies may have extended their access facilities outside their  
14 local networks to provide centralized access services, but these circumstances are  
15 exceptional and, in any event, the LECs are compensated for their provision of access  
16 services to other carriers. For the Petitioners, telecommunications services provided to  
17 end users that involve transport responsibility to interconnection points with other  
18 carriers' networks at points beyond a Petitioner's limited service area and network  
19 generally are provided by IXCs, not by the Petitioner LECs. The involvement of the  
20 Petitioners in such calls is limited to the provision of network functions within their own  
21 networks. As such, for calls destined to points "outside of the local exchange," the IXC  
22 chosen by the end user is responsible for the transport and network functions for the  
23 transmission of the call beyond the Petitioner's network. Accordingly, calls destined to

1 interconnection points beyond the local exchange and service area of a Petitioner are both  
2 “routed” and “rated” by the customer’s chosen IXC.

3 The wireline LEC that may originate calls to a number that has been ported to a  
4 wireless carrier cannot unilaterally provision local calling to this number where there are  
5 no arrangements established with the wireless carrier. Just as the introduction of an EAS  
6 route involves the establishment of interconnection and network and business  
7 arrangements between two carriers, the ability to exchange local exchange service calls  
8 with a wireless carrier also necessitates interconnection and the establishment of the  
9 necessary terms and conditions under which traffic may be exchanged. Interconnection  
10 occurs as the result of a request and the mutual development of terms and conditions  
11 between the carriers for such interconnection. Just as the establishment of an EAS route  
12 does not occur in the absence of negotiation and agreement regarding the network  
13 arrangements and the exchange of traffic, interconnection with a wireless carrier is not a  
14 spontaneous event. The mere deployment of a NPA-NXX, the association of a rate  
15 center point with a specific NPA-NXX, and/or the porting of a wireline telephone number  
16 to a wireless carrier does not automatically establish interconnection or any expectation  
17 that calls can or will be originated as a “local exchange service” call or that calls can be  
18 completed on such basis.

19 **Q27: Do the Petitioners typically have in place direct interconnection arrangements or**  
20 **other service arrangements with all potential wireless carriers that could port**  
21 **numbers?**

22 **A:** No. This is in contrast to Bell companies which typically do have some form of  
23 interconnection and physical trunking arrangements in place with most, if not all, of the

1 wireless carriers that will seek number portability. Quite possibly that would explain  
2 some of the incorrect assumptions which are the apparent basis for some of the FCC's  
3 statements in its *Nov. 10 Order*. These assumptions are apparently the result of assuming  
4 that the experience and operations of the Petitioners are comparable to that of Bell  
5 companies.

6 **Q28: What will be the consequences when a wireline number is ported to a wireless**  
7 **carrier that has no direct interconnection arrangement or other service**  
8 **arrangement in place with the wireline LEC?**

9 **A:** The unresolved issues and the fact that no service arrangement may exist with the  
10 wireless carrier means that there will be carrier and customer confusion. Where there is  
11 no service arrangement between a Petitioner and the wireless carrier to which a number  
12 may have been ported, there will be no trunk over which the LEC could direct local  
13 exchange service calls to the wireless carrier if that is the service that the LEC seeks to  
14 provide to its wireline customers. The Petitioners have only one available option for the  
15 completion of such calls. In such instances, the caller attempting to place a call would  
16 receive a message with the instructions that the call cannot be completed as dialed and  
17 must be completed using an interexchange carrier by dialing 1 plus the 10-digit number.  
18 If the customer dials the ported number in this manner, the LEC would hand such call off  
19 to the interexchange carrier chosen by the originating user, the service is provided by the  
20 interexchange carrier, the routing of the call would be determined by the interexchange  
21 carrier, and the end user would be assessed a toll charge by that interexchange carrier.

22 **Q29: Did the FCC say anything else concerning the routing of calls to wireless carriers in**  
23 **the Nov. 10 Order?**

1 **A:** Yes. The FCC stated that the routing of calls between wireline and wireless  
2 carriers did not need to be resolved in the LNP docket and, instead, it would be addressed  
3 in the context of a Declaratory Ruling request filed by Sprint still pending before the  
4 FCC.

5  
6 . . . We make no determination, however, with respect to the routing of ported  
7 numbers . . . . [T]he rating and routing issues raised by the rural wireline  
8 carriers have been raised in the context of non-ported numbers and are before the  
9 [FCC] in other proceedings. Therefore, without prejudging the outcome of any  
10 other proceeding, we decline to address these issues at this time as they relate to  
11 intermodal LNP.

12  
13 *Nov. 10 Order*, para. 40, footnotes omitted.

14  
15 **B. OTHER UNRESOLVED AND UNEXPLAINED ISSUES**

16 **Q30: Why is it necessary to discuss the background and sequence of events leading to the**  
17 **FCC's *Nov. 10 Order*?**

18 **A:** As I will explain below, the apparent directives in the FCC's *Nov. 10 Order* have  
19 not been logically explained, are not consistent with the FCC's own conclusions and  
20 procedural approach, and leave implementation issues unresolved for the Petitioners. The  
21 conclusions to be drawn from the FCC's *Nov. 10 Order* are still not clear.

22  
23

1           1.     **BACKGROUND: NUMBER PORTABILITY CONCEPTS**

2     **Q31: Are there other “types” of number portability other than Service Provider**  
3     **Portability that you discussed earlier in this testimony?**

4     **A:**           Conceptually, yes. The FCC has defined a type of number portability called  
5     “Location Number Portability.” As explained earlier in this Testimony, Service Provider  
6     Portability is the ability of users of telecommunications services to retain, at the same  
7     location, existing telecommunications numbers when switching from one local service  
8     provider to another. In contrast, Location Number Portability is the ability of a  
9     telecommunications service user to retain her or his same telephone number when  
10    moving from one physical location to another.

11    **Q32: Is Location Number Portability part of the definition of the Act?**

12    **A:**           As reflected above, the Act defines “number portability” as the ability for  
13    customers to retain, at the same location, their existing numbers when switching carriers.  
14    The definition contained in the Act is consistent with only the Service Provider Number  
15    Portability definition that the FCC has adopted.

16    **Q33: Has the FCC adopted requirements for Location Portability?**

17    **A:**           No. Location Number Portability involves geographic and other implementation  
18    issues that go beyond those associated with Service Provider Number Portability. With  
19    location portability, there is no longer a relationship between the NPA-NXX of the  
20    telephone number and the geographic area in which an end user obtains service using that  
21    telephone number. Because carriers’ services are based on specific geographic areas and  
22    because carriers currently provision service and switch calls based on NPA-NXXs, the  
23    “porting” of a number within a particular NPA-NXX to a different geographic area means

1 that carriers are unable, with current technology, to determine the proper service  
2 treatment of calls.

3  
4 **2. SERVICE “AT THE SAME LOCATION” ISSUES**

5 **Q34: Can you provide an example of the inability to determine the service treatment of**  
6 **calls?**

7 A: Yes. For example, under current technical capabilities, a carrier would not know  
8 whether a call to a location ported number is to a location that is included within the local  
9 calling area services offered by the LEC to its end users (such as the local exchange and  
10 Extended Area Service (“EAS”) arrangements) or whether the call is to a distant location  
11 that would be an interexchange call subject to provision by the end user’s preferred  
12 interexchange carrier (“IXC”). In the former example, if the call would be between two  
13 end users physically located within the local calling area, the call is treated as a local  
14 exchange service call. In the latter example of a toll call originated in one of the  
15 Petitioners’ service areas, the call is subject to equal access treatment (*i.e.*, the call is  
16 routed to the end user’s presubscribed long distance carrier) and is subject to the terms of  
17 either intrastate or interstate access tariffs, and the rate for the call is determined by the  
18 end user’s chosen IXC. However, because of the real-world, real-time incapability to  
19 know the locations of the two end users involved in the call, implementing any form of  
20 Location Number Portability would wreak havoc on the telephone companies and the end  
21 users they serve unless and until some new and costly network capability could be  
22 developed to determine the location of end users on a real-time basis. Absent this real-  
23 time capability, end users would not be able to know what charges they are incurring and

1 the LECs would not know how to recover their costs related to the call. It is for all of  
2 these reasons the FCC has not required that LECs implement Location Number  
3 Portability at this time.

4 **Q35: Did the FCC conclude that porting numbers from wireline carriers to wireless  
5 carriers for use on a mobile basis across the country constitutes location portability?**

6 **A:** No. But the FCC did not explain the illogical consequences of that apparent  
7 conclusion, and those aspects of its orders are the reason why the entire industry has been  
8 left to “scratch its head” with regard to the meaning to attach to the FCC’s statements.  
9 The FCC simply stated its conclusion that porting numbers to a wireless carrier which  
10 allows the wireless carrier to provide service on a mobile basis to customers that move  
11 across the country does not mean that the service is provided beyond “the same location”  
12 and therefore does not, in the FCC’s view, constitute location portability. However, the  
13 FCC failed to explain rationally how the porting of a telephone number for use by a  
14 mobile wireless service user constitutes retention of its use “at the same location.” In any  
15 event, the statement about location portability cannot be reconciled with the facts, and the  
16 FCC did not provide the necessary guidance as to how to reconcile this illogical statement  
17 with the current network realities. When a number is ported for mobile wireless carrier  
18 use, not only will a wireless carrier use that number to provide service to a mobile user  
19 “moving from one physical location to another” -- the exact definition that the FCC  
20 prescribed for the concept of location portability -- but more problematic is that, for the  
21 Petitioners, the number could be ported to a wireless carrier that does not have any  
22 service presence or any interconnection arrangement in the local exchange area associated  
23 with the NPA-NXX number prior to its being ported.

1           As is obvious, the FCC's unsubstantiated statement is contrary, without sufficient  
2 explanation, to the plain language of the Act, and leaves open the unreasonable  
3 possibilities that (1) a number may be ported to a wireless carrier that has no presence,  
4 whatsoever, in the area that constitutes "at the same location;" (2) the wireless carrier can  
5 now port that number for use at many different locations, perhaps across the entire nation,  
6 well beyond the "same service location;" and (3) the wireline LECs operating in "the  
7 same location" have no arrangement, whatsoever, with the wireless carrier to which the  
8 number has been ported in that "same location." Accordingly, the FCC's orders  
9 completely neglect, without sufficient explanation, these circumstances and facts that  
10 render the concept "at the same location" meaningless and the conclusions in the *Nov. 10*  
11 *Order* illogical.

12 **Q36: Are there any issues that arise as a result of wireless carriers using the ported**  
13 **number on a mobile basis?**

14 **A:**           Yes. Despite the simple and unexplained statement by the FCC to the contrary, a  
15 telephone number currently used by a wireline end user at a fixed location that is  
16 subsequently ported to a wireless carrier to be used on a mobile basis automatically  
17 involves the use of that telephone number when moving from one physical location to  
18 another (unless the wireless user intends to fix the location of her or his wireless phone).

19           The mobile user may not only use the number when moving from one location to another  
20 within the original exchange area, but likely will use the number in a much wider  
21 geographic area including, for most wireless carriers, the ability to place and receive calls  
22 at locations throughout the entire country. Furthermore, the wireless user may  
23 subsequently take his or her wireless phone and move to another state and use that

1 telephone number on a full time basis in that other state. As such, the porting of  
2 telephone numbers from wireline use to wireless mobile use automatically presents both  
3 location portability and service provider portability issues. In the reverse, a mobile user  
4 with a telephone number associated with a rate center area in another state (or at some  
5 distance away from the wireline LEC but within the same state) can nevertheless use his  
6 or her mobile phone in the wireline LEC's local rate center area, but the LEC cannot port  
7 that number from the wireless carrier to the wireline LEC's use. This is the disparate  
8 competitive situation that the FCC's illogical requirements present which is also the  
9 reason why the industry group charged with studying and making recommendations about  
10 intermodal porting has never recommended that it be adopted specifically because of this  
11 geographic disparity issue.

12  
13 **3. THERE HAS BEEN NO RECOMMENDATION FOR**  
14 **INTERMODAL LNP.**

15 **Q37: Prior to the FCC's *Nov. 10 Order*, were the obligations of the Petitioners clear with**  
16 **respect to intermodal porting of a number to a wireless carrier?**

17 **A:** No. The rulemaking process that the FCC put in place to resolve the issues  
18 associated with the disparity in geographic service areas between wireline and wireless  
19 carriers that arise under intermodal porting is still open and the issues are still unresolved.  
20 There had been no recommendation or proposal as to how to resolve all of the  
21 geographic disparity issues associated with intermodal porting.

22 **Q38: What is the rulemaking process that the FCC announced that it would use to**  
23 **examine and adopt rules for wireline-wireless number portability?**

1    **A:**           The FCC recognized in its July 2, 1996 number portability decision that there are  
2           complex definition and implementation issues with respect to wireline-wireless number  
3           portability as compared to wireline-wireline number portability. These complex issues  
4           arose because of the fundamental geographic differences between mobile wireless service  
5           areas and wireline service areas. Accordingly, the FCC did not adopt requirements for  
6           wireless-wireline number portability at the same time as it adopted the initial rules for  
7           wireline-wireline number portability. Instead, in its August 18, 1997 decision, the FCC  
8           decided that it would assign the more difficult wireless-wireline issues to an expert  
9           industry workgroup (the North American Numbering Council or “NANC”) with the  
10          intent that the workgroup would study these issues, develop consensus on solutions, and  
11          then make “recommendations” to the FCC as to how to resolve the outstanding issues.  
12          The FCC’s process, then, involves the development of recommendations by the NANC,  
13          followed by FCC notice of such recommendations, and the allowance of sufficient time  
14          and opportunity for the industry to study the recommendations and comment prior to any  
15          such recommendations becoming a regulatory rule.

16    **Q39: Did the FCC alter this process in its *Nov. 10 Order*?**

17    **A:**           No.

18    **Q40: Has there been a recommendation from the industry expert workgroup regarding**  
19          **porting between wireless carriers and wireline carriers?**

20    **A:**           No, and that is at the heart of the problem here. There has been no explicit  
21          recommendation from the industry workgroup that states the manner in which the  
22          geographic disparity issues arising from intermodal porting would be solved. There have  
23          been reports which attempt to explain the unresolved geographic disparity issues related

1 to porting between wireless and wireline carriers. For example, the NANC reported in  
2 both 1999 and 2000, the last two reports that I am aware of on these issues, that the  
3 industry could not reach consensus on a resolution of the rate center area disparity issues,  
4 and no recommendation on intermodal porting was offered. Nowhere can one find an  
5 explicit and complete recommendation as to how the industry group proposed to solve all  
6 of the disparate geographic, definition, and operational issues necessary to implement  
7 wireline-wireless number portability consistent with the statutory requirements.

8 To add further confusion and uncertainty to this process, the geographic disparity  
9 issues were originally related to Location Number Portability, not Service Provider  
10 Number Portability. Based on my review of the reports, it appears that early in their  
11 deliberations the industry workgroup concluded that if and when Location Number  
12 Portability is implemented, the location porting of a number must nevertheless be limited  
13 to service within the same rate center. This condition of confining portability to the same  
14 rate center area was relevant solely to Location Number Portability, not Service Provider  
15 Number Portability. However, the rate center area disparity issue has been inexplicably  
16 confused, and the condition of confinement of portability to the same rate center area  
17 somehow, over time and without clear explanation, apparently became part of the Service  
18 Provider Number Portability considerations, despite the fact that this form of portability is  
19 already defined by statute to be “at the same location.”

20 **Q41: Based on your understanding of the NANC recommendations made to date, is there**  
21 **one that you can point to that resolves the issues that you have identified regarding**  
22 **intermodal porting?**

23 **A:** No. Regardless of the confusing course, one cannot find a clear recommendation

1 from the NANC as to how to reconcile these outstanding intermodal porting issues  
2 (whether for location or service provider portability), much less any document or  
3 proposals that constitutes a clear proposal for comment. The facts are: (1) the disparity in  
4 the geographic aspects of wireline and wireless service still remain; (2) when a number is  
5 ported to a mobile user, the wireless carrier that is the new service provider may not have  
6 any intercarrier network interconnection or service arrangements in place in the original  
7 rate center area; (3) the mobile user will most certainly use that number when moving  
8 from one location to another; and (4) in all likelihood, the mobile user will use that  
9 telephone number in a different rate center than the rate center with which it was  
10 originally associated. “At the same location” has been rendered meaningless without  
11 proper explanation.

12 **Q42: What conclusions can you draw as a result of this sequence of events?**

13 **A:** The Petitioners had no reason to expect that intermodal number portability,  
14 inconsistent with the general understanding of the statute, existing regulation, and the  
15 status of industry workgroup efforts, was yet required.

16 **Q43: What has been the response of the LEC industry to the FCC’s action?**

17 **A:** It is not surprising that the industry has responded with Court action challenging  
18 the *Nov. 10 Order*.

19 **Q44: What is the status of these proceedings?**

20 **A:** All of these matters await substantive action.

21 **Q45: Why are all of these uncertainties relevant to the instant requests for suspension?**

22 **A:** Because the uncertainties raise the distinct specter that the Petitioners will be  
23 making human and economic investments and expending real work resources all in an

1 effort to make a good faith effort to implement LNP when their requirements are unclear.  
2 Magnifying this problem, my understanding is that no, or very few, wireline customers of  
3 the Petitioners have requested to port a number for wireless use. The real world concern  
4 is that these costs could be incurred and would be reflected in end user rates without any  
5 real purpose or potential benefit that would be afforded to customers. Moreover, after  
6 these issues are resolved, Petitioners may find that they would be required to modify their  
7 previous implementation activity at additional cost.

8 The requested relief would preclude the potential waste of resources in an attempt  
9 to implement what are currently a confusing, incomplete and inconsistent set of apparent  
10 requirements. As such, the requested relief is fully consistent with the public interest and  
11 would recognize the infeasibility of the Petitioners moving forward with efforts based on  
12 unknown and ambiguous FCC directives. The requested action would also avoid the  
13 significant adverse economic impact on the Petitioners' end users and undue economic  
14 burden that will result from an attempt to comply under these uncertain conditions.

15 Without suspension, the Petitioners would find themselves in the untenable  
16 position of attempting to implement some way in which numbers would be ported to  
17 wireless carriers. However, in such case, as explained in this testimony, some calls may  
18 not be completed to their final destination, there will be ensuing customer confusion,  
19 customers may receive bills for calls that they do not expect, and the Petitioners will incur  
20 costs that may go unrecovered.

1                   **4. LACK OF ANY LOGICAL APPLICATION OF THE “RATE CENTER**  
2                   **AREA” CONCEPT TO MOBILE USERS.**

3 **Q46: Do you agree that it appears that much of the discussion and apparent directives of**  
4 **the FCC depend on so-called rate center areas?**

5 **A:**               Yes.

6 **Q47: What is a rate center area?**

7 **A:**               A rate center area is a specific geographic area. Telephone number codes (NPA-  
8 NXXs) are assigned and associated with rate center areas with the assumption that these  
9 numbers will be used to provide service exclusively within that rate center area (except in  
10 the case of wireless carrier mobile users). However, the fact that wireless carriers may  
11 not use the NPA-NXX to provide mobile service to the end user in the same rate center  
12 area with which the NPA-NXX is associated for wireline service (and similarly a wireless  
13 carrier may use a specific NPA-NXX associated with one specific rate center area to  
14 provide mobile service in a different wireline rate center area) is at the crux of the  
15 geographical rate center area disparity issue between wireless carriers and wireline  
16 carriers that has not been resolved.

17               Within a rate center area, there is a designated rate center point (vertical and  
18 horizontal coordinates) that carriers may use to calculate airline miles between any two  
19 rate center points. The rate center point is a geographic point that is intended to be the  
20 representative point for the entire rate center area for purposes of mileage calculation.

21               The concept of “rate center areas” was developed originally for purposes of  
22 calculating charges for interexchange services where the rates were based on mileage.

23               Almost no calling services today depend on mileage. Some carriers’ billing and service

1 administrative processes depend on industry databases (the “Local Exchange Routing  
2 Guide” or “LERG”) that associate NPA-NXX telephone numbers with specific rate center  
3 areas. However, many small LECs have no need for such reliance and do not necessarily  
4 utilize such database tools because they provision their own local exchange carrier  
5 services on an individual case basis, based on specific geographic areas included within  
6 their local calling area and the establishment of unique physical trunking between those  
7 geographic areas.

8 To add to the confusion, the FCC has attempted to extend the use of the word  
9 “rate” (with respect to a call) beyond its original meaning, apparently now to mean the  
10 determination by a LEC of whether a call is within the definition of what the LEC offers  
11 and provides as local exchange service, or whether the call is not. The determination of  
12 whether a call, when dialed, is a local exchange service call or an interexchange service  
13 call is simply a service definition determination, not rating. As explained in this  
14 testimony, the determination of whether a call is a local exchange service call or an  
15 interexchange service call is based on the location of the calling and called parties. Under  
16 the traditional use of the word, the Petitioners do not generally “rate” local exchange  
17 service calls, at all. These calls are part of an unlimited service for which no “rating” is  
18 necessary or applied. Rating was originally a concept relevant only to interexchange  
19 services, and the rate center points (V&H) were used to determine the “rate” for the call.  
20 But interexchange services are no longer rated based on mileage, the only “rating” that  
21 takes place for interexchange service calls is in the determination of whether the  
22 interexchange service call is intrastate or interstate in nature, based on the V&H  
23 coordinates of the called and calling parties, and the duration of the call.

1 **Q48: Are LECs required to rely on rate center information of other carriers contained in**  
2 **industry databases in their provisioning of intrastate local exchange carrier**  
3 **services?**

4 **A:** No. I am aware of no federal regulatory requirement which requires LECs,  
5 including the Petitioners, to utilize LERG data that associates a specific NPA-NXX with  
6 a specific rate center area as the sole means to determine the scope of local exchange  
7 services to be offered to their own customers. Of particular note, as explained below,  
8 even the FCC has concluded that this information is generally meaningless with respect to  
9 mobile wireless service. The industry's NPA-NXX assignment guidelines, endorsed by  
10 the FCC, which include the administrative processes for the association of a rate center  
11 area with an NPA-NXX code, also recognize that not all carriers utilize this information  
12 for the definition and billing of services. Many small LECs do not depend solely, nor are  
13 they required to do so, on the unsupervised information that other carriers submit for  
14 inclusion in the industry database as the means to provision their local exchange services.  
15 These LECs may, however, refer to this information as a tool to identify other carriers  
16 and their apparent operations.

17 In summary, I am unaware of any federal regulatory requirement that carriers must  
18 determine the jurisdiction of a call, or must provision specific local exchange carrier  
19 services, based on rate center points that other carriers associate with NPA-NXXs. In  
20 fact, the FCC has concluded previously that the telephone number does not determine the  
21 jurisdiction of a call when the calling and called parties' locations do not relate to the  
22 geographic area associated with the NPA-NXX. The FCC has used the example of  
23 callers in the multi-state area surrounding the District of Columbia to illustrate this fact.

1 Because wireless carrier mobile users often cross state lines and are mobile, a cellular  
2 customer with a telephone number associated with Richmond, Virginia may travel to  
3 Baltimore, Maryland. A call between the mobile user in Baltimore and, for example, a  
4 wireline end user in Alexandria, Virginia might appear to be an intrastate call “placed  
5 from a Virginia telephone number to another Virginia telephone number, but would in  
6 fact be interstate . . . .” 11 FCC Rcd 5020, 5073, *In the Matter of Interconnection*  
7 *Between Local Exchange Carriers and Commercial Mobile Radio Service Providers, and*  
8 *Equal Access and Interconnection Obligations Pertaining to Commercial Mobile Radio*  
9 *Service Providers*, CC Docket Nos. 95-185 and 94-54, (1996) at para. 112, underlining  
10 added. Similarly, while a call between a wireline end user in Richmond to the mobile  
11 user in Baltimore might also appear to be an intrastate call because the call is placed from  
12 a Virginia telephone number to another number that also appears to be associated with  
13 Virginia, but this call would also in fact be an interstate call. When one end of the call is  
14 in Maryland and the other is in Virginia, the call is interstate. The telephone numbers  
15 assigned to the users do not determine the jurisdiction.

16 **Q49: Does the concept of a rate center area and its association with an NPA-NXX make**  
17 **sense with respect to telephone numbers assigned to mobile users of wireless**  
18 **carriers?**

19 **A:** No. It is nonsensical to associate a specific geographic area to a user that, by  
20 definition, is expected to be, and most likely will be, mobile across large areas, including  
21 potentially across the entire nation. The telephone number does not determine the  
22 location of the mobile user. For jurisdictional determinations, the actual physical  
23 location of the mobile user determines whether a call is intrastate or interstate. For

1 interconnection purposes, *i.e.* to determine whether a call is within a Major Trading Area  
2 (“MTA”) or between two MTAs (*i.e.*, intraMTA or interMTA), the location of the cell  
3 site serving the mobile user at the beginning of the call is used as the surrogate for the  
4 actual geographic service location of the mobile user, not the telephone number. I am not  
5 aware of any FCC regulation that requires that the location of a mobile user be based on  
6 the telephone number or NPA-NXX used by that mobile user.

7 **Q50: Do others share your views about the lack of any geographic relationship between**  
8 **rate center areas and mobile users?**

9 **A:** Yes. My views are exactly consistent with the FCC’s conclusions. In its October  
10 7, 2003 number portability order related to wireless-wireless porting, the FCC concluded  
11 (at para. 22) that “[b]ecause wireless service is *spectrum-based and mobile in nature,*  
12 *wireless carriers do not utilize or depend on the wireline rate center structure to provide*  
13 *service:* wireless licensing and service areas are typically much larger than wireline rate  
14 center boundaries, and wireless carriers typically charge their subscribers based on  
15 minutes of use rather than location or distance.” (emphasis added). The FCC’s  
16 conclusion confirms that the specific geographic areas known as rate center areas for  
17 wireline LECs have no relevance to the services offered to, or provided to, the typical  
18 mobile user of the large wireless carriers.

19 **Q51: You discuss intermodal LNP at great lengths. Does that mean that there are no**  
20 **obstacles or burdens associated with intramodal LNP?**

21 **A:** No. For most small and rural LECs, it is intermodal porting brought on by the  
22 FCC’s *Nov. 10 Order* that has precipitated the need for the suspension request by the  
23 Petitioners. However, implementing LNP for intramodal porting would present similar

1 cost burdens and potential imbalance between benefits and costs with similar public  
2 interest implications. Furthermore, there are still those unresolved issues yet to be  
3 decided such as the porting interval that would impact implementation of intramodal  
4 porting the same as for intermodal porting.

5  
6 **V. CONCLUSION**

7 **Q52: What conclusions do you draw from your discussion of LNP?**

8 **A:** Even if the unexplained and uncertain issues discussed in this Testimony were to  
9 be resolved properly, the costs of implementing LNP in the rural Petitioners' exchanges  
10 would unjustly burden the rural customers with higher rates to support a capability that  
11 would benefit only a few, if any, customers that may want to port their number. Further,  
12 with respect to wireless LNP, the evidence is that there would be little, if any, demand by  
13 rural customers to abandon wireline service and completely substitute wireless service.  
14 The costs to deploy number portability are significant and would burden unnecessarily the  
15 customers of the Petitioners without any clear or balanced public interest benefit. Given  
16 these circumstances, the Petitioners should not be forced to incur substantial costs, to  
17 redirect their limited resources into otherwise unnecessary or misguided efforts in an  
18 attempt to comply with a confusing and incomplete set of apparent requirements, and  
19 burden their rural users with rate increases for only speculative, if any, benefits. Such a  
20 result would not be consistent with the public interest.

21 With respect to the incomplete and unexplained aspects of the FCC's *Nov. 10*  
22 *Order*, the Petitioners are placed in an untenable position – although carriers are required  
23 to implement LNP if there is a request, the implementation requirements are incomplete

1 and subject to change and. Further, with respect to intermodal LNP, the implementation  
2 requirements (a) have not been properly established or logically explained; (b) are based  
3 on assumptions that are inconsistent with the experience and operations of the Petitioners;  
4 and/or (c) are inconsistent with the facts and existing regulations. Accordingly, these  
5 shortcomings make the fulfillment of intermodal LNP infeasible and unduly economically  
6 burdensome under uncertain terms. The Petitioners continue to have concerns about the  
7 routing and completion of calls to intermodal ported numbers, the resulting confusion on  
8 the part of customers about how to complete calls and the charges for such calls, and the  
9 ensuing customer dissatisfaction with the Petitioners, as well as with federal and state  
10 regulators, created by this state of uncertainty. Any attempt to implement LNP under  
11 these circumstances would result in the imposition of undue economic burdens on the  
12 Petitioners and their customers -- a result not consistent with the public interest.

13 The interests of all of the parties -- the Petitioners, their customers, and the  
14 Commission -- will be better served by the grant of a suspension until such time as the  
15 demand for LNP and the costs are balanced consistent with a rational public interest  
16 determination and the apparent requirements can be satisfied in an orderly and thoughtful  
17 manner. If the Petitioners are required to implement counter-productive, uncertain, or  
18 infeasible requirements, customers will ultimately bear the harm in the form of greater  
19 costs and a redirection of carriers' resources away from more valuable and worthy efforts.  
20 The implementation and network issues associated with number portability in the rural  
21 areas served by the Petitioners are real and should be addressed in the interest of the  
22 overall public, not just with respect to the interests of a very few customers and wireless  
23 carriers that may want wireline-wireless number portability at the otherwise greater

1 expense to the vast majority of users. Grant of the suspension would serve an overall  
2 and balanced consideration of the public interest.

3 For the reasons set forth in this testimony, implementation of LNP pursuant to the  
4 FCC's apparent directives would result in economic harm in the form of unnecessary  
5 resource burdens on the Petitioners and their customers in the form of higher costs and  
6 rates, undue economic burdens for the small LECs potentially affected by the uncertain  
7 directives, and an apparent requirement for service provision that is not technically  
8 feasible under current conditions. Each one of these conclusions provides a more than  
9 sufficient basis for suspension of the LNP requirements consistent with the relief  
10 requested by the Petitioners. Suspension of the LNP requirements will avoid the adverse  
11 economic impacts set forth in Section 251(f)(2)(A) of the Act, will avoid technically  
12 infeasible requirements, and would be consistent with the Section 251(f)(2)(B) public  
13 interest, convenience, and necessity criteria.

14 These conclusions provide a more than sufficient basis for suspension of the  
15 requirements under the conditions and time frames requested by the Petitioners.

16 **Q53: Does this end your testimony?**

17 **A:** Yes.

## SUMMARY OF WORK EXPERIENCE AND EDUCATION

**Steven E. Watkins**

**May 2004**

My entire 28-year career has been devoted to service to smaller, independent telecommunications firms that primarily serve the small-town and rural areas of the United States.

I have been a consultant with the firm of Kraskin, Lesse & Cosson, LLC since June, 1996. The firm concentrates its practice in providing professional services to small telecommunications carriers. My work at Kraskin, Lesse & Cosson, LLC, has involved assisting smaller, rural, independent local exchange carriers ("LECs") and competitive local exchange carriers ("CLECs") in their analysis of a number of regulatory and industry issues, many of which have arisen with the passage of the Telecommunications Act of 1996. I am involved in regulatory proceedings in several states and before the Federal Communications Commission on behalf of small LECs. These proceedings are examining the manner in which the Act should be implemented. My involvement specifically focuses on those provisions most affecting smaller LECs.

I have over the last seven years instructed smaller, independent LECs and CLECs on the specific details of the implementation of the Act including universal service mechanisms, interconnection requirements, and cost recovery. On behalf of clients in several states, I have analyzed draft interconnection agreements and conducted interconnection negotiations and arbitrations pursuant to the 1996 Act.

For 12 years prior to joining Kraskin, Lesse & Cosson, LLC, I held the position of Senior Industry Specialist with the Legal and Industry Division of the National Telephone Cooperative Association ("NTCA") in Washington, D.C. In my position at NTCA, I represented several hundred small and rural local exchange carrier member companies on a wide array of regulatory, economic, and operational issues. My work involved research, analysis, formulation of policy, and expert advice to member companies on industry issues affecting small and rural telephone companies.

My association work involved extensive evaluation of regulatory policy, analysis of the effects of policy on smaller LECs and their rural customers, preparation of formal written pleadings in response to FCC rulemakings and other proceedings, weekly contributions to association publications, representation of the membership on a large number of industry committees and task forces, and liaison with other telecom associations, regulators, other government agencies, and other industry members. I also attended, participated in and presented seminars and workshops to the membership and other industry groups too numerous to list here.

For those not familiar with NTCA, it is a national trade association of approximately 500 small, locally-owned and operated rural telecommunications

providers dedicated to improving the quality of life in rural communities through advanced telecommunications. The Association advocates the interests of the membership before legislative, regulatory, judicial, and other organizations and industry bodies.

Prior to my work at NTCA, I worked for over eight years with the consulting firm of John Staurulakis, Inc., located in Seabrook, Maryland. I reached a senior level position supervising a cost separations group providing an array of management and analytical services to over 150 small local exchange carrier clients. The firm was primarily involved in the preparation of jurisdictional cost studies, access rate development, access and exchange tariffs, traffic analysis, property records, regulatory research and educational seminars.

For over ten years during my career, I served on the National Exchange Carrier Association's ("NECA") Industry Task Force charged with reviewing and making recommendations regarding the interstate average schedule cost settlements system. For about as many years, I also served in a similar role on NECA's Universal Service Fund ("USF") industry task force.

I graduated from Western Maryland College in 1974 with a Bachelor of Arts degree in physics. As previously stated, I have also attended industry seminars too numerous to list on a myriad of industry subjects over the years.

During my career representing small telecommunications firms, I estimate that I have prepared formal written pleadings for submission to the Federal Communications Commission on behalf of NTCA member and Kraskin, Lesse & Cosson client LECs in over two hundred proceedings. I have also contributed written comments in many state proceedings on behalf of Kraskin, Lesse & Cosson client LECs. I have provided testimony in proceedings before the Georgia, Pennsylvania, Indiana, Kentucky, Missouri, Nebraska, Minnesota, Montana, Tennessee, Kansas, South Carolina, New Mexico, West Virginia, and Louisiana public service commissions. Finally, I have testified before the Federal-State Joint Board examining jurisdictional separations changes.

## CERTIFICATE OF SERVICE

I hereby certify that an original and ten (10) copies of the foregoing Direct Testimony of Steven E. Watkins was were hand-delivered to the South Dakota PUC on May 14, 2004, directed to the attention of:

Pam Bonrud  
Executive Director  
South Dakota Public Utilities Commission  
500 East Capitol Avenue  
Pierre, SD 57501

A copy was sent by U.S.P.S. First Class Mail to:

Talbot Wieczorek  
Gunderson Palmer Goodsell Nelson  
440 Mount Rushmore Road  
Rapid City, SD 57701

David Gerdes  
May, Adam, Gerdes & Thompson  
P.O. Box 160  
Pierre, SD 57501

Dated this 14th day of May, 2004.

---

Richard D. Coit, General Counsel  
South Dakota Telecommunications Association  
PO Box 57 – 320 East Capitol Avenue  
Pierre, SD 57501-0057

BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA

RECEIVED

JUN 14 2004

IN THE MATTER OF THE PETITIONS FOR )  
SUSPENSION OR MODIFICATION OF )  
§ 251(b)(2) OF THE COMMUNICATIONS )  
ACT OF 1934 AS AMENDED )

REBUTTAL TESTIMONY OF

STEVEN E. WATKINS

Submitted on behalf of above Rural Local Exchange Carriers and  
the South Dakota Telecommunications Association

June 14, 2004

1 Q1: **Please state your name, business address and telephone number.**

2 A: My name is Steven E. Watkins. My business address is 2120 L Street, N.W., Suite 520,  
3 Washington, D.C. 20037. My business telephone number is (202) 296-9054.

4 Q2: **On whose behalf are you testifying?**

5 A: I am testifying on behalf of the rural local exchange carriers that are the petitioning par-  
6 ties in dockets captioned above (to be referred to as the "Petitioners") and the South  
7 Dakota Telecommunications Association.

8 Q3: **Have you previously submitted testimony in these proceedings?**

9 A: Yes. I submitted direct testimony on May 14, 2004 in these dockets (to be referred to as  
10 "Watkins Direct").

11 Q4: **What is the purpose of your Rebuttal Testimony?**

12 A: The primary purpose of this Rebuttal Testimony is to respond to the Direct Testimony  
13 filed by Ron Williams on behalf of Western Wireless.

14 Q5: **Do you have any initial comments relative to these dockets?**

15 A: Yes. Only one wireless carrier filed testimony in these proceedings, even though there  
16 must be other wireless carriers operating in South Dakota.

17 Q6: **To what do you attribute this lack of interest in LNP in South Dakota by wireless  
18 carriers other than Western Wireless?**

19 A: The fact that other wireless carriers have decided not to participate in this proceeding and  
20 not to submit testimony is consistent with the general observations and conclusions in my  
21 Direct Testimony that there are few, if any, wireline end users in rural South Dakota that  
22 actually want to abandon, or would abandon, their wireline service and port their wireline  
23 number for use solely in connection with wireless service. There is no real demand for

1 intermodal porting in rural South Dakota and the lack of participation is more evidence of  
2 that fact. As such, the other wireless carriers seem to accept and to understand that de-  
3 mand for intermodal LNP would be non-existent or small in rural South Dakota areas,  
4 and therefore have apparently concluded that spending their time and resources attempt-  
5 ing to force, merely on principle, an unnecessary LNP requirement on rural LECs would  
6 lack a business purpose.

7 Similarly, I would like to add that Western Wireless has also previously con-  
8 cluded in comments filed with the Federal Communications Commission (“FCC”) that  
9 “LNP is unnecessary to further competition.” Reply Comments of Western Wireless  
10 filed October 21, 2001, in WT Docket No. 01-184 at pp. 2-5 (a proceeding in which Ver-  
11 izon Wireless was seeking partial forbearance of LNP requirements). Western Wireless  
12 noted that, as a provider of conventional cellular and wireless local loop services, “West-  
13 ern is making significant inroads competing against wireline service providers -- without  
14 offering LNP.” *Id.* Western Wireless went on to state that “there is no evidence to sug-  
15 gest that the inability of CMRS customers to port their numbers is an impediment to  
16 changing service providers.” *Id.* at p. 5.

17 **Q7: Do you have any initial comments about Mr. Williams' direct testimony?**

18 **A: Yes. Mr. Williams' testimony is simply incorrect on several points and, therefore, his**  
19 **discussion would be misleading if accepted without review:**

20 ■ Mr. Williams confuses a waiver request before the FCC pursuant to the FCC's local  
21 number portability (“LNP”) rules in contrast to a suspension proceeding before a state  
22 commission pursuant to the broad protections that Congress provided in Section 251(f)(2)  
23 of the Act for small telephone companies and their rural customers.

1 ■ In reviewing what Mr. Williams considers to be the standards for review pursuant to a  
2 Section 251(f)(2) proceeding, Mr. Williams incorrectly references discussion by the FCC  
3 that the Courts have rendered inapplicable. The Courts have concluded that the conclu-  
4 sions contained in Mr. Williams' discussion are contrary to the protections Congress set  
5 forth in the Act.

6 ■ Mr. Williams questions whether there are LNP routing issues, but then presents incon-  
7 sistent testimony that illustrates the same unresolved issues that I set forth in my direct  
8 testimony regarding some new routing arrangement that would have to be established af-  
9 ter a number is ported. The FCC's confusing statements cannot be reconciled with the  
10 facts that I will explain more fully in this Rebuttal Testimony.

11 ■ Mr. Williams discussion of routing issues is, in reality, merely an attempt to impose  
12 extraordinary and unfair transport obligations on the rural LECs far beyond those that ac-  
13 tually apply. The comments of Western Wireless have more to do with burdening the  
14 rural LECs with transport than with any interest in LNP. This may also explain why  
15 Western Wireless is the sole wireless carrier participating in this proceeding.

16 **Q8: Are there any relevant issues that are missing from Mr. Williams Direct Testimony?**

17 **A:** Yes. Any discussion of the subject of the adverse economic impact on customers (the  
18 first suspension criterion in Section 251(f)(2) of the Act) in South Dakota is glaringly ab-  
19 sent from his testimony. While Mr. Williams discusses the economic burden on the  
20 Petitioners, he fails to address the adverse economic impact on users of telecommunica-  
21 tions services in rural areas of South Dakota. *See* 47 U.S.C. § 251(f)(2)(A)(I) His  
22 testimony completely disregards the significant adverse economic impact on users in jux-  
23 taposition to the absence of demand or any potential benefit of implementation of LNP in

1 rural areas of South Dakota.

2 Q9: **How have you organized the remainder of your Rebuttal Testimony?**

3 A: For ease of review by the Commission and the parties, the remainder of my Rebuttal Tes-  
4 timony will follow, to the extent that is possible, the order of issues presented in Mr.  
5 Williams' testimony.

6 Q10: **Do you have any comments regarding Mr. Williams' discussion at p. 3 of a "juris-**  
7 **diction issue regarding waivers to LNP Implementation?"**

8 A: Mr. Williams' conclusions are incorrect in his response on p. 3 of his Direct Testimony.  
9 First, Mr. Williams discusses waiver requests before the Federal Communications Com-  
10 mission, not suspension requests before a state commission. (He then cites Section 332  
11 of the Act to suggest some authority, but Section 332 provides authority for the FCC to  
12 establish physical, direct connections with local exchange carriers for wireless carriers,  
13 irrelevant to the issues in this proceeding).

14 With respect to a suspension request, there is no question that this Commission  
15 possesses jurisdiction pursuant to Section 251(f)(2) of the Communications Act of 1934,  
16 as amended ("Act"). Section 251(f)(2) relates to requests to state commissions for sus-  
17 pension or modification of requirements in Section 251(b) and (c) of the Act, including  
18 the LNP requirement. Mr. Williams spends several pages, beginning on p. 6, discussing  
19 the criteria in the Act regarding Section 251(f)(2) proceedings.

20 In contrast, the FCC's narrow waiver request rules are intended only to address  
21 situations where there are circumstances beyond the control of a carrier that require some  
22 delay in implementation of LNP. Those set of waiver considerations are completely  
23 separate and unrelated to the considerations set forth in Section 251(f)(2) of the Act.

1 Pursuant to Section 251(f)(2), the Petitioners seek a suspension or modification,  
2 not an FCC waiver, as is clearly their right under this statutory provision, and such re-  
3 quests are clearly a matter to be filed with and resolved by state commissions, not the  
4 FCC. Moreover, the Petitioners have not sought waiver of any Section 251(b)(2) re-  
5 quirement, so the use of this word by Mr. Williams is both incorrect and misleading.

6 Contrary to Mr. Williams' suggestion that the FCC "asserted jurisdiction," there  
7 is no opportunity for the FCC to assert its jurisdiction in a Section 251(f)(2) matter, and  
8 the FCC has previously and specifically recognized state commissions' authority to grant  
9 suspensions from implementation of LNP. In 1997, the FCC specifically cited, in an  
10 LNP order, Section 251(f)(2) and noted that if state commissions exercise their authority  
11 to suspend, "eligible LECs will have sufficient time to obtain any appropriate Section  
12 251(f)(2) relief as provided by the statute." *In the Matter of Telephone Number Portabil-*  
13 *ity, First Memorandum Opinion and Order on Reconsideration*, 12 FCC Rcd 7236 (1997)  
14 (*"Number Portability Reconsideration"*) at 7302-03. There has been no reversal of this  
15 state commission authority.

16 Q11: **On pages 4-5 and 10-11 of his Direct Testimony, Mr. Williams notes LNP suspen-**  
17 **sion activity in other states. What comment do you have regarding this activity in**  
18 **other states?**

19 A: Based upon information published by Neustar (dated May 20, 2004), there is LNP sus-  
20 pension activity in at least 35 states. The status of that activity in each state is different  
21 and is based on the facts and circumstances of the carriers in those states and the specific  
22 requests of those carriers. In any event, the majority of those states that have pending  
23 suspension requests have granted some relief to the rural LECs seeking suspension.

1 While an exact count is difficult, on May 20, 2004, there appeared to be 28 states in  
2 which requests are still pending or some form of the requests had been granted. Never-  
3 theless, it appears that 18 of the 35 states have granted either a specific suspension or an  
4 interim suspension while the matter is further studied. Far from Mr. Williams attempted  
5 portrayal, the majority of the states have found merit in suspending LNP obligations for  
6 the smaller LECs. And for those states that may have denied the requests, it is not sur-  
7 prising that the state commissions in such states may have been misled by the FCC's less  
8 than adequate handling of its confusing LNP orders or the consequences of the unre-  
9 solved issues.

10 In any event, the activity in other states is based on the specific circumstances of  
11 those states. I would urge the Commission and the parties to focus on the policy, facts,  
12 public interest, and impact on consumers as it relates to LNP suspension in South Dakota.  
13 This Commission is in the best position to review these facts as they relate to the rural  
14 users in South Dakota, and the Commission is in the best position to determine the public  
15 interest with respect to those users.

16 **Q12: On page 4 of his testimony, Mr. Williams notes FCC action regarding North-**  
17 **Eastern Pennsylvania Telephone Company (“NEP”). What relevance does this ac-**  
18 **tion at the FCC have with respect to a state suspension proceeding?**

19 **A:** None. The facts and circumstances of the NEP matter are unrelated to those related to a  
20 suspension request or the issues related to the South Dakota Petitioners. As I already ex-  
21 plained above, an FCC waiver matter is very much different from one that will review the  
22 criteria in the Act under Section 251(f)(2). The NEP matter was a request for temporary  
23 waiver before the FCC; NEP is implementing LNP; NEP needed more time as a result of

1 the failure by its equipment manufacturer to deliver necessary functionalities associated  
2 with new soft switch installations. While the FCC did not grant the waiver request, it  
3 nevertheless gave NEP additional time to get in order the necessary hardware and soft-  
4 ware with its equipment manufacturer. In any event, it was not a suspension request  
5 pursuant to Section 251(f)(2) of the Act.

6 **Q13: On page 10 of his direct testimony, Mr. Williams notes a statement by the Pennsyl-**  
7 **vania Commission. Do you have any comment?**

8 **A:** Yes. What Mr. Williams fails to point out is that the Pennsylvania Commission, in the  
9 proceedings cited by Mr. Williams, granted suspension of certain Section 251(b) and (c)  
10 interconnection requirements for a large number of small LECs in Pennsylvania contrary  
11 to that which is implied by the testimony of Mr. Williams.

12 **Q14: What is your reaction to Mr. Williams' statement at p. 5 that "all LECs have known**  
13 **since 1996 that they would be required to provide LNP"?**

14 **A:** Even if this observation were true, it is not relevant to these proceedings because Section  
15 251(f)(2) of the Act gives the Petitioners the right to file suspension petitions and it im-  
16 poses no time constraints on when such suspension petitions must be filed. In any event,  
17 I disagree with the implication. Although the Act contains an LNP provision, there was  
18 no LNP requirement until the FCC developed implementation rules (notwithstanding the  
19 fact that these rules are still incomplete). Further, for carriers outside of the top 100  
20 MSAs, such as the Petitioners, there was no LNP requirement until the Petitioners re-  
21 ceived a specific request for LNP. Thus, Petitioners could not know that they might be  
22 required to implement LNP until they were asked to do so.

23 Even once various wireless carriers like Western Wireless requested LNP, it was

1 not at all clear that the requests complied with the FCC's rules. In fact, it took the FCC  
2 eleven months to "clarify" the meaning of its rules after the wireless carriers admitted un-  
3 certainty. It is difficult to understand how Western Wireless can argue that the  
4 Petitioners should have known in 1996 that they had an obligation to port numbers to  
5 wireless carriers when no wireless carrier had made a request for number portability until  
6 2003 and the FCC needed eleven months to "clarify" the obligation that Western Wire-  
7 less contends is so apparent.

8 Moreover, a factual review of the record before the FCC demonstrates that no one  
9 could have anticipated the FCC would reach the novel conclusions reflected in the *Nov.*  
10 *10 Order*. Many very difficult issues associated with intermodal porting have been iden-  
11 tified and studied by both the FCC and the industry working group selected by the FCC  
12 and, even currently, there has been no proposal or recommendation to resolve these in-  
13 termodal porting issues. Consequently, there could not have been any reasonable  
14 expectation that the FCC would disregard the record and its own announced process and  
15 order intermodal LNP as described in the *Nov. 10 Order*.

16 I will address additional aspects of the *Nov. 10 Order* later in this Rebuttal Testi-  
17 mony and explain why the Order represents a significant departure from the FCC's  
18 previously announced approach to the establishment of new requirements and how some  
19 of the FCC's statements make no sense when compared with the facts. I devote several  
20 pages of my Direct Testimony to the background of the sequence of events and/or lack of  
21 action that led to the *Nov. 10 Order* and explain why no one could have anticipated the  
22 FCC's action. Watkins Direct at pp. 15-35.

23 Q15: **On pp. 6-7 of his Direct Testimony, Mr. Williams sets forth his view of the standards**

1 Congress intended for a Section 251(f)(2) proceeding and sets forth the FCC's de-  
2 scription of the meaning of "undue economic burden." Are his views correct?

3 A: No. Mr. Williams has misstated applicable law. The FCC attempted to invoke an im-  
4 proper interpretation of what is meant by "undue economic burden," and the Courts have  
5 subsequently vacated the applicable FCC Rule relating to this subject.

6 Mr. Williams at p. 7, lines 1-3 and line 12-19, cites the FCC discussion in its *First*  
7 *Report and Order* of the narrow criteria that the FCC sought to apply with respect to the  
8 evaluation of Section 251(f)(1) exemptions and Section 251(f)(2) suspension and modifi-  
9 cation requests and the FCC's attempt to confine the definition of undue economic  
10 burdens. As the Courts have concluded, the FCC attempted improperly to narrow the ex-  
11 emption, suspension, and modification provisions of Section 251(f) of the Act by  
12 adopting Section 51.405 of its Rules. The FCC's conclusions and Section 51.405 of its  
13 rules were subsequently vacated. The statements of the FCC cited by Mr. Williams are in  
14 the section of the *First Report and Order* that has been completely invalidated by the  
15 Courts.

16 On July 18, 2000, on remand from the United States Supreme Court, the United  
17 States Court of Appeals for the Eighth Circuit issued its opinion in *Iowa Utilities Board*  
18 *v. Federal Communications Commission*, 219 F.3d 744(8<sup>th</sup> Cir. 2000) ("*IUB I*"), which,  
19 *inter alia*, vacated Section 51.405(a), (c) and (d) of the FCC's rules.

20 *IUB II* establishes that the proper standard for determining whether compliance  
21 with Section 251(b) or (c) would result in imposing a requirement that is unduly eco-  
22 nomically burdensome includes "the full economic burden on the ILEC of meeting the  
23 request that must be assessed by the state commission" and not just that which is "beyond

1 the economic burden that is typically associated with efficient competitive entry." 219  
2 F.3d at 761 The Court emphasized that "undue economic burden" is just one of three al-  
3 ternative bases on which suspension or modification may be granted under § 251(f)(2) --  
4 the others being adverse economic impact on users and technical infeasibility.

5 **Q16: How does this Eighth Circuit Court of Appeals decision support the Petitioners' po-**  
6 **sitions with respect to their request for suspension of LNP?**

7 **A:** According to the Court, the FCC attempted unlawfully to limit the interpretation of "un-  
8 duly economically burdensome," and, therefore, the FCC had "impermissibly weakened  
9 the broad protection Congress granted to small and rural telephone companies." 219 F.3d  
10 at 761. In no uncertain terms, the Court concluded that the FCC's interpretation (as re-  
11 flected in the references Mr. Williams has provided) frustrated the policy underlying the  
12 statute and stated "[t]here can be no doubt that it is an economic burden on an ILEC to  
13 provide what Congress has directed it to provide to new competitors in § 251(b) or §  
14 251(c)." *Id.*

15 **Q17: Mr. Williams, at pp. 12-15 of his Direct Testimony, questions the infeasible opera-**  
16 **tional and technical implementation obstacles that would be encountered by the**  
17 **Petitioners. Do you have any comment?**

18 **A:** Yes. I will let the factual record speak for itself because it fully demonstrates the obsta-  
19 cles confronting carriers regarding potential routing of calls to ported numbers where  
20 there is no interconnection or other business arrangement in place.

21 **Q18: On page 14, the testimony of Mr. Williams may suggest that you are confused about**  
22 **the differences between Service Provider Portability and Location Portability, and**  
23 **what the FCC has ordered. Are you confused?**

1 A: No. Although additional issues remain before the FCC and before the Courts regarding  
2 the arbitrary aspects of the FCC's orders related to the FCC's own definition of Service  
3 Provider Portability compared to Location Portability, my testimony has emphasized the  
4 unresolved issues and inconsistencies in the FCC's order related solely to Service Pro-  
5 vider Portability. Even Mr. Williams's words (on p. 14), about what Service Provider  
6 Portability means, further illustrates my point. Mr. Williams concedes that the statutory  
7 and FCC rule definition of Service Provider Portability is the substitution of service using  
8 the same number "at the same location where the customer receives landline service."  
9 Without debating the fact that a number ported to a mobile user of wireless service auto-  
10 matically means that the customer will most certainly not use the same number for  
11 service "at the same location where the customer receives landline service," the "at the  
12 same location" statutory and rule criterion is rendered unreasonably meaningless where  
13 the wireless carrier neither has a presence, nor an interconnection arrangement over  
14 which calls can be routed, in the rate center area that constitutes "at the same location."  
15 My testimony centers on the "at the same location" issue within the original rate center  
16 area. There are many additional issues, beyond this proceeding and the scope of my tes-  
17 timony, regarding what meaning to apply with respect to Location Portability.

18 **Q19: Mr. Williams questions whether there are really routing issue problems. Did the**  
19 **industry workgroup ever discuss problems associated with routing issues?**

20 A: Yes, the industry workgroup acknowledged and listed the same problems that the FCC  
21 has failed to recognize and address in the *Nov. 10 Order*. See also Watkins Direct at p.  
22 15-21.

23 A thorough review of the workgroup reports reveals very interesting observations

1 and conclusions consistent with my Direct Testimony about the fact that intermodal port-  
2 ing would not be feasible if there are no business and network interconnection  
3 arrangements in place with the relevant wireless carrier in the local area that constitutes  
4 “at the same location.” I want to emphasize that the “at the same location” criterion is  
5 part of the statutory requirement and the FCC’s own definition of Service Provider Port-  
6 ability that forms the LNP requirement.

7 In a Report from the North American Number Council (“NANC”) submitted by  
8 its Chairman to the FCC on May 18, 1998 (“1998 NANC Report”), the group reported  
9 and explained unresolved intermodal LNP issues (Section 3 on page 6):<sup>1</sup>

10 SECTION 3 WIRELESS WIRELINE INTEGRATION ISSUES

11 3.1 Rate Center Issue

12 3.1.1 Issue: Differences exist between the local serving areas of  
13 wireless and wireline carriers. These differences impact Service Provider  
14 Portability with respect to porting both to and from the wireline and wire-  
15 less service providers. . . .

16 The 1998 Report concludes (on p. 7) that consensus could not be reached on a so-  
17 lution to the Rate Center Issue. (And subsequent reports in 1999 and 2000 have  
18 concluded the issue is still open.)

19 This 1998 Report also includes, as an Appendix D, a Background Paper that dis-  
20 cusses some of the same issues related to the rate center disparity issue between wireless  
21

---

<sup>1</sup> See letter from Alan C Hasselwander, Chair, North American Numbering Council, dated May 18, 1998, to Mr. A. Richard Metzger, Jr., Chief, Common Carrier Bureau, Federal Communications Commission. The various reports and white papers are attached to Mr. Hasselwander’s May 18 letter. All of the NANC reports to be referenced in this rebuttal testimony can be found on the FCC’s website by going to “Search” and then to “Search for Filed Comments.” These NANC reports are attached to the Petition for Declaratory Ruling filed by CTIA on January 23, 2003 in CC Docket No. 95-116 addressing LNP. By entering the docket number

1           and wireline operations. As I concluded in my Direct Testimony, there are technical  
2           infeasibility implications for intermodal porting where there is no presence by the wire-  
3           less

---

and date, the documents (seven “pdf” files) are available on line through this search site.

1 carrier in the area that constitutes “at the same location” because there is no network or  
2 business arrangement in place for the routing of calls. Most notably, as far back as 1998,  
3 the NANC realized these same issues and obstacles and reported them to the FCC:

### 4 3.0 Limitations on the Scope of Service Provider Portability

5  
6 Due to the need to ensure proper rating and routing of calls, the NANC  
7 LNPA Architecture Task Force agreed that service provider portability was lim-  
8 ited to moves within an ILEC rate center. Section 7.3 of the NANC LNP  
9 Architecture & Administrative Plan report which has been adopted by the FCC,  
10 states, “portability is technically limited to rate center/rate district boundaries of  
11 the incumbent LEC . . . .

12  
13 1998 NANC Report, Appendix D - Rate Center Issue, Section 3.0, Limitations on the  
14 Scope of Service Provider Portability at p. 34, underlining added.

15 At p. 35 of the Appendix D Background Paper, the report notes four possible sce-  
16 narios -- two for wireline-to-wireless porting and two for wireless-to-wireline porting.  
17 For the first two wireline-to-wireless porting scenarios, the Background Information pa-  
18 per concludes in both cases that:

19 Porting would be permissible as long as the wireless service provider has  
20 established an interconnect agreement for calls to the wireless telephone number

21 . . . .

22 [Underlining added]

23 The Background Paper goes on to explain that some of the scenarios described for wire-  
24 less-to-wireline porting would not be permissible, and this accounts for the competitive  
25 disparity that the FCC’s *Nov. 10 Order* has allowed.

26 Finally, the Background Paper at p. 35 summarizes exactly the same kind of tech-  
27 nical infeasibility issues related to routing that I set forth in my Direct Testimony, namely  
28 that LNP is only possible where there is a business and network interconnection ar-  
29 rangement in place with the relevant wireless carrier within the relevant rate center area:

1 The above examples provide only a small sample of potential porting scenarios.  
2 If all of the potential scenarios were examined, the following patterns would  
3 emerge:  
4

5 Porting from a wireline service provider to a wireless service provider  
6 [“WSP”] is permitted as long as the subscriber’s initial rate center is within the  
7 WSP service area and the WSP has established interconnection/business arrange-  
8 ments for calls to wireless numbers in that rate center . . . .  
9

10 Porting from a wireless service provider to a wireline service provider is  
11 *only* allowed when the subscriber’s physical location is within the wireline rate  
12 center associated with the wireless NPA-NXX.  
13 [Underlining added]

14 The latter statement above is the realization that porting in the wireless-to-  
15 wireline direction is limited by the rate center disparity issue and this limitation leads to  
16 disparity in competitive opportunities. The former underlined statement above that inter-  
17 connection and business arrangements are prerequisites to permit porting is a conclusion  
18 that the FCC refuses to acknowledge, yet is a fact. In subsequent reports, NANC repeat-  
19 edly stated that there had been no consensus on rate center disparity issues and no  
20 recommendation on a technical or competitively fair approach to remedy the reported ob-  
21 stacles. In the last report that I can identify, the NANC lists the Rate Center Issue as an  
22 “Open Issue” and states that the reader should review the 1998 and 1999 reports for de-  
23 tails about the issue (the same discussion from the 1998 report that I have set forth above)  
24 and that “[n]o resolution of this issue has occurred.”

25 **Q20: Are these conclusions by the FCC’s expert industry work group consistent with**  
26 **your testimony?**

27 **A: Yes. Where there is no interconnection/business arrangement with a wireless carrier to**  
28 **which a number may be ported, the Petitioners have no established network or business**  
29 **arrangement to route calls; therefore, porting is not “permitted” as the work group prop-**

1 erly concluded. Furthermore, the Petitioners have no statutory right or other ability to  
2 force wireless carriers to enter into proper “interconnection/business arrangements.” Ac-  
3 cordingly, contrary to Mr. Williams’ claims, the technical obstacles that I have outlined  
4 in the testimony are real.

5 A wireline LEC that may originate a call to a number of another carrier cannot  
6 unilaterally provision a calling service where there is no interconnection/business ar-  
7 rangement with the other carrier. Just as the introduction of an Extended Area Service  
8 (“EAS”) route between two incumbent LECs involves the establishment of interconnec-  
9 tion facilities and business arrangements between the two carriers, the ability of a LEC to  
10 exchange local exchange service calls with a wireless carrier also necessitates intercon-  
11 nection and the establishment of the necessary terms and conditions under which the  
12 traffic will be exchanged. Interconnection occurs as the result of a request by a carrier  
13 other than an incumbent LEC and is dependent on the mutual development of terms and  
14 conditions between the carriers for such interconnection. These obvious conclusions are  
15 embodied in the conclusion of the NANC work group.

16 **Q21: Mr. Williams at p. 20 and his Exhibit 6 diagrams claim that the Petitioners should**  
17 **provision network and/or create new arrangements for the delivery of local calls to**  
18 **some interconnection point beyond the Petitioners’ networks. Do the local competi-**  
19 **tion interconnection rules, or any other regulation, require the Petitioners to**  
20 **provision local services to distant points beyond their own networks?**

21 **A:** No. Mr. Williams’ statements are misleading and contrary to the interconnection re-  
22 quirements in the Act. Further, as admitted by Western Wireless in response to  
23 Interrogatory 7.b., attached hereto as Exhibit 1, Mr. Williams’ statements are contrary to

1 the interconnection agreements recently negotiated between Western Wireless and Peti-  
2 tioners.

3 For several reasons, the Petitioners are not required to provision services beyond  
4 their own networks, to purchase services from other carriers, or to deliver local exchange  
5 carrier service calls to points of interconnection beyond the Petitioners' own networks:

6 ■ The interconnection obligations established under the Act apply with respect to the  
7 service area of the incumbent LEC, not the service area of some other LEC:

8 For purposes of this section, the term 'incumbent local exchange carrier'  
9 means, with respect to an area, the local exchange carrier that (A) on the date of  
10 enactment of the Telecommunications Act of 1996, provided telephone exchange  
11 service in such area . . . .

12 47 U.S.C. § 251(h), (underlining added)

13 ■ It has long been established that the Act does not require an incumbent LEC to provi-  
14 sion, at the request of another carrier, some form of interconnection arrangement that is  
15 superior or extraordinary to that which the LEC provisions for itself. The LEC's obliga-  
16 tions are only to provide interconnection arrangements that are at least equal to those that  
17 the LEC provides for itself and its own service, not superior. However, the suggestion by  
18 Mr. Williams that a Petitioner could be required to provision local exchange carrier ser-  
19 vices with transport to some distant point, or to purchase services from some other carrier  
20 for transport of traffic beyond the Petitioner's network (*e.g.*, from Qwest to transport traf-  
21 fic to the Qwest tandem), would represent just such extraordinary arrangement not  
22 required of the Petitioners. While an incumbent LEC may, at the incumbent LEC's sole  
23 discretion, voluntarily agree to extraordinary arrangements, the LEC would not do so

1 unless the carrier requesting such extraordinary arrangement is prepared to compensate  
2 the incumbent LEC or be responsible for the extraordinary costs for any such superior ar-  
3 rangement.

4 In the same *IUB II* cited above, the Eighth Circuit Court of Appeals reaffirmed its  
5 earlier conclusion, not affected by the Supreme Court's remand, that the FCC had unlaw-  
6 fully adopted and attempted to impose interconnection requirements on incumbent LECs  
7 that would have resulted in superior arrangements to that which the incumbent LEC pro-  
8 vides for itself. It is now well established that an incumbent LEC is not required to  
9 provision some superior form of interconnection service arrangement at the request of  
10 another carrier, but that is Mr. Williams' suggestion. The Court concluded that "the su-  
11 perior quality rules violate the plain language of the Act." The Court concluded that the  
12 standard of "at least equal in quality" does not mean "superior quality" and "[n]othing in  
13 the statute requires the ILECs to provide superior quality interconnection to its competi-  
14 tors." 219 F.3d at 757-758.

15 It is noteworthy here also to point out that under the invalidated superior quality  
16 rule that the FCC had originally adopted, even the FCC in imposing the unlawful re-  
17 quirement to provide some superior form of interconnection had nevertheless also  
18 concluded that the LEC should be paid for the extraordinary costs associated with the su-  
19 perior interconnection arrangement. Pursuant to Mr. Williams' suggestion, not only  
20 would Western Wireless require a superior quality interconnection from the Petitioners,  
21 he would also do so without compensation for the extraordinary costs.

22 ■ The FCC's own interconnection rules addressing the exchange of traffic subject to the  
23 so-called reciprocal compensation requirements envision only that traffic exchange take

1 place at an “interconnection point” on the network of the incumbent LEC, not at an inter-  
2 connection point on some other carrier’s network. “Incumbent LECs are required to  
3 provide interconnection to CMRS providers who request it for the transmission and rout-  
4 ing of telephone exchange service or exchange access, under the plain language of  
5 section 251(c)(2).” (underlining added) In the Matter of Implementation of the Local  
6 Competition Provisions in the Telecommunications Act of 1996, *First Report and Order*,  
7 11 FCC Rcd. 15499 at para. 1015. *See also, Id.* at paras. 181-185. Moreover, Sections  
8 251(c)(2)(A)-(C) of the Act states:

9 (2) Interconnection.-- The duty to provide, for the facilities and equipment  
10 of any requesting telecommunications carrier, interconnection with the local ex-  
11 change carrier’s network-- (A) for the transmission and routing of telephone  
12 exchange service and exchange access; (B) at any technically feasible point  
13 within the carrier’s network; (C) that is at least equal in quality to that provided  
14 by the local exchange carrier to itself or to any subsidiary, affiliate, or any other  
15 party to which the carrier provides interconnection . . . (underlining added)

16 Therefore, it is Western Wireless’s obligation to provision its own network or ar-  
17 range for the use of some other carrier’s facilities outside of the incumbent LEC’s  
18 network as the means to establish that “interconnection point” on the network of the in-  
19 cumbent LEC.

20 ■ LECs such as the Petitioners generally do not offer or provide any local exchange call-  
21 ing service to their own customers that would involve transport to distant locations as  
22 suggested by Mr. Williams. Calls which involve transport to distant locations beyond the  
23 networks of the Petitioners are provided by interexchange carriers (“IXCs”), and these

1 calling services are not local exchange carrier services. The Act does not require the Pe-  
2 titioners to begin to offer some new and extraordinary form of local calling to their own  
3 customers. The involvement of the Petitioners in such calls is simply the provision of ac-  
4 cess services to IXCs that are the service providers to the end users.

5 Accordingly, there can be no expectation that Petitioners must transport local ex-  
6 change service traffic to some distant point when the Petitioners have no statutory or  
7 regulatory interconnection obligation to do so. Whether Mr. Williams' suggestion to the  
8 contrary (or the presumption embodied in the FCC's confusing statements in its recent  
9 orders) equates to a request that is infeasible because it is premised on the fulfillment of  
10 a network arrangement that does not exist and for which there is no legal requirement, or  
11 a request that imposes undue economic burden on the Petitioners because it would re-  
12 quire some extraordinary superior arrangement, it does not really matter because either  
13 potential outcome is sufficient to warrant suspension under Section 251(f)(2)(A) of the  
14 Act. Either condition is sufficient, on its own, under Section 251(f)(2).

15 **Q22: At page 20 of his Direct Testimony, Mr. Williams questions whether LNP costs**  
16 **would impose an undue economic burden on the Petitioners. What response do you**  
17 **have to his comments?**

18 **A:** With respect to the economic burden on the Petitioners, while some costs associated with  
19 LNP implementation may be recovered through a surcharge imposed on their own cus-  
20 tomers, there will be other costs incurred by the Petitioners beyond those costs that  
21 qualify for the surcharge treatment. And, if an improper form of LNP were imposed on  
22 the Petitioners, one that would impose some extraordinary form of interconnection with a  
23 requirement to incur transport costs to some distant point, there would be additional costs

1 associated with an attempt to comply with the directives and the provisioning of the ex-  
2 traordinary network and other business arrangements. The potential costs to transport  
3 traffic to some distant point are potentially unbounded.

4 Mr. Williams fails to acknowledge the significant adverse economic impact any  
5 of this would impose on the rural subscribers in South Dakota.

6 **Q23: On p. 22 of his Direct Testimony, Mr. Williams notes routing issues, potentially**  
7 **similar to those that you have discussed above, associated with a Notice of Apparent**  
8 **Liability (“NAL”) issued by the Enforcement Bureau of the FCC against Century-**  
9 **Tel of Washington. What is your response?**

10 **A:** I note that the NAL is not a final decision. Further, although all of the facts are not clear  
11 from the NAL, it is clear that CenturyTel had not received a suspension or interim sus-  
12 pension of the LNP requirement from the state commission. For these reasons, it is not  
13 clear to what extent, if any, this case may apply to other LECs, like the Petitioners.  
14 What is clear, however, is that the proper routing of calls, including in the LNP environ-  
15 ment, requires the carriers involved to establish interconnection and business  
16 relationships.

17 As I explained above, the Petitioners have no obligation to provision interconnec-  
18 tion to distant points beyond that at which the Petitioners provision any other local  
19 exchange service calls; the Petitioners have no obligation to put in place some superior  
20 form of interconnection service for the benefit of some other carrier that has not re-  
21 quested interconnection; and the Petitioners, in any event, cannot resolve these routing  
22 issues unilaterally because the Act states that interconnection terms and conditions are es-  
23 tablished by a carrier’s request to an incumbent.

1 Q24: **On pp. 22-23, Mr. Williams states that if Petitioners do not implement LNP it will**  
2 **limit wireless to wireless LNP because wireless carriers use numbers assigned by**  
3 **LECs. How do you respond?**

4 A: Mr. Williams admits in his answer to Interrogatory 19. that Western Wireless is not re-  
5 quired to use numbers assigned by LECs and that it can obtain its own numbers and not  
6 use those assigned by LECs.

7 Q25: **On pp. 23-24 Mr. Williams notes that the FCC’s Consumer and Governmental Af-**  
8 **fairs Bureau submitted a letter to NARUC addressing issues associated with**  
9 **requests for suspension before State commissions. Do you have any comment?**

10 A: Yes. A thorough review of the Snowden letter finds that the actual substance is suppor-  
11 tive of the grant of the Petitioners’ suspension requests. The letter simply asks the  
12 President of NARUC to remind state commissions to apply the “appropriate standard of  
13 review” to requests under Section 251(f) of the Act. The Petitioners have already dem-  
14 onstrated that grant of their requests is fully consistent with those standards, even beyond  
15 the standards required by the Act and beyond that which the Eighth Circuit Court of Ap-  
16 peals has confirmed and clarified.

17 The Snowden letter limits its suggestions regarding proper review to include only  
18 the “undue economic burden and technical infeasibility” criteria. Just as Mr. Williams  
19 has neglected to address the adverse impact on customers that LNP implementation  
20 would impose, Mr. Snowden also omits these considerations.

21 Q26: **On page 24, Mr. Williams suggests that there are likely to be greater numbers of**  
22 **customers switching to wireless service. Do you have any comment about his state-**  
23 **ments?**

1 A: Yes. First, Mr. Williams references Mr. Thierer's speculative CATO report that was pre-  
2 pared even before implementation of intermodal LNP in the top 100 MSAs had begun.  
3 The evidence that is available since November 24, 2003 indicates that the degree of in-  
4 termodal porting from wireline to wireless, in the more urban areas, is small and less than  
5 expected. And any expected interest in rural areas, such as those served by the Petition-  
6 ers, will even be less than the already nascent level of intermodal porting in urban areas.  
7 *See Watkins Direct* at pp. 10-15. In a May 21, 2004 News Release, the FCC reports that  
8 since November 2003, "[o]ver 3.5 million numbers have been switched. . . . Approxi-  
9 mately 229,000 involved landline customers taking their landline number to a wireless  
10 carrier." The latter statistic represents the initial six months of intermodal LNP experi-  
11 ence in the Nation's top 100 MSAs. Clearly, the national demand for intermodal LNP in  
12 metropolitan areas has been modest.

13 **Q27: Mr. Williams complains at pp. 24-25 that Western Wireless has had to spend re-**  
14 **sources for LNP. Is this relevant?**

15 A: No. The fact that the FCC mandated that LNP be implemented by CMRS carriers is not  
16 at issue in these proceedings. Congress explicitly established the opportunity for a rural  
17 telephone company to obtain a suspension or modification in Section 251(f)(2) under the  
18 broad protections Congress intended for rural customers and carriers. Nothing in these  
19 requirements includes consideration of actions of other carriers, either voluntarily or in-  
20 voluntarily.

21 **Q28: Mr. Williams complains at p. 25 that it would be "unfair" if the Petitioners are not**  
22 **required to implement LNP because it would limit Western Wireless opportunity to**  
23 **recoup its LNP costs by porting numbers from the Petitioners. How do you re-**

1           **spond?**

2    A:    Mr. Williams statement is not compelling given that LNP in the wireless-to-wireline di-  
3           rection is only required, pursuant to the *Nov. 10 Order*, in the very limited circumstance  
4           where the wireless number resides in the correct LEC rate center. The current circum-  
5           stances are more competitively fair than the disparate version of LNP that would result  
6           under the FCC's approach given the unresolved rate center disparity issues that I have  
7           discussed in my response to Question 19. At least, Western Wireless has some opportu-  
8           nity to port numbers from other wireless providers, whereas most of the Petitioners would  
9           have little or no opportunity to recoup their costs by porting-in numbers. Requiring the  
10          Petitioners to implement LNP would be even more "unfair" than the situation about  
11          which Western Wireless complains.

12   **Q29: What relevance does Mr. Williams' quote on p. 26 regarding rate centers and rout-**  
13   **ing and rating of calls have here?**

14    A:    None. Mr. Williams apparently believes that the quoted FCC statement at p. 26, lines 13-  
15          16 of his Direct Testimony has a meaning different than the facts would indicate. First,  
16          the rate center associated with a telephone number does not necessarily determine the  
17          service treatment of calls. Second, even if a LEC wanted to use rate center areas as the  
18          means to define local exchange carrier services, as I have already explained above, the  
19          LEC cannot and would not treat calls to a wireless user as a local exchange service call if  
20          the LEC has no interconnection or business arrangement in place with the wireless carrier  
21          because the LEC would have had no requirement to have network trunks in place or es-  
22          tablished terms with other carriers to route such calls. Calls to users of wireless carriers  
23          where there is no established network interconnection or business arrangements in place

1 are necessarily handed off to IXC's who complete such calls to a distant point. Therefore,  
2 "rated in the same fashion" simply means that the calls to the ported number are treated  
3 as IXC calls as any other call is treated for which there is no interconnection or business  
4 arrangement in place with the wireless carrier that would allow for the routing of a call by  
5 the LEC to the wireless carrier as a local call.

6 **Q30: What concluding comments would you offer to the Commission with regard to the**  
7 **pending Requests?**

8 **A:** For all of the reasons set forth in my Direct Testimony and herein, I respectfully urge the  
9 Commission to grant the suspension requests of the Petitioners. Their requests satisfy the  
10 criteria set forth in Section 251(f)(2) of the Act and are consistent with the preservation  
11 of the public interest:

12 ■ The costs to implement LNP, wireline-wireline and wireline-wireless, would impose  
13 significant adverse economic impacts on the users of telecommunications in rural areas of  
14 South Dakota served by Petitioners.

15 ■ The FCC's *Nov. 10 Order* as well as subsequent orders and statements regarding in-  
16 termodal LNP create more problems than solutions. Intermodal LNP would impose on  
17 the Petitioners either undue economic burdens, requirements that are not technically fea-  
18 sible, or both.

19 ■ Suspension of the implementation of LNP for these Petitioners is consistent with the  
20 public interest, convenience and necessity in that the costs of LNP implementation to  
21 both telecommunications users and the Petitioners are significant and the benefits are  
22 slight as evidenced by the lack of demand for LNP among consumers in the areas served  
23 by the Petitioners in rural South Dakota.

1 Q31: **What is the scope of the modification or suspension that the Petitioners seek from**  
2 **this Commission pursuant to Section 251(f)(2)?**

3 A: Specifically, the current suspension of the FCC's LNP requirements should be extended  
4 until conditions may have changed (*i.e.*, a change in the cost related to demand) relevant  
5 to the public interest considerations that form the basis here for the Petitioners' suspen-  
6 sions. This would include suspension until the FCC and the Courts make a full and final  
7 disposition of the outstanding issues, including the porting interval and wireless to wire-  
8 line LNP requirements. Further, the Commission should confirm that the Petitioners  
9 have no obligation to transport calls beyond their service areas for purpose of LNP or any  
10 other purpose. Finally, when the issues are resolved and the public interest circumstances  
11 may have changed, the Petitioners would need sufficient time to acquire and install the  
12 necessary hardware and software and to put in place the necessary administrative proc-  
13 esses.

14 Q32: **Does this conclude your Rebuttal Testimony?**

15 A: Yes.

# **EXHIBIT 1**

---

BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA

---

IN THE MATTER OF THE PETITIONS  
FOR SUSPENSION OR MODIFICATION  
OF § 251(b)(2) OF THE  
COMMUNICATIONS ACT OF 1934 AS  
AMENDED

Docket No. TC04-025; TC04-038; TC04-044  
through TC04-056; TC04-060 through TC04-  
062; TC04-077; TC04-084; and TC04-085

**WWC'S RESPONSES TO  
SUPPLEMENTAL DISCOVERY  
REQUESTS OF PETITIONERS**

WWC License LLC, by and through its undersigned attorney, Talbot J. Wieczorek, of Gundersen, Palmer, Goodsell & Nelson, LLP, Rapid City, South Dakota, hereby responds to the Supplemental Discovery Requests of the Petitioners in the following dockets:

TC-04-025	Kennebec Telephone Co.
TC04-038	Santel Communications
TC04-044	Sioux Valley Telephone Co.
TC04-045	Golden West, Vivian Telephone Co and Kadoka Tele Co
TC04-046	Armour, Bridgewater-Canistota Tele Co and Union Tele Co
TC04-047	Brookings Municipal Utilities d/b/a Swiftel Communications
TC04-048	Beresford Municipal Telephone Company
TC04-049	McCook Cooperative Telephone Company
TC04-050	Valley Telecommunications Cooperative Association, Inc.
TC04-051	City of Faith Telephone Company
TC04-052	Midstate Communications, Inc.
TC04-053	Western Telephone Company
TC04-054	Interstate Telecommunications Cooperative, Inc.
TC04-055	Alliance Communications Inc. and Splitrock Properties
TC04-056	RC Communications, Inc., and Roberts County Telephone Cooperative Assn.
TC04-060	Venture Communications Cooperative
TC04-061	West River Cooperative Telephone Company
TC04-062	Stockholm-Strandburg Telephone Company
TC04-077	James Valley Cooperative Telephone Company
TC04-084	Tri-County Telecom
TC04-085	Cheyenne Sioux Tribe Telephone Authority

## II. DISCOVERY REQUESTS

### A. INTERROGATORIES

1. At page 10, lines 6-14 of Mr. Williams' testimony, he states that similarly situated LECs are not seeking a delay or suspension of LNP implementation. Identify the similarly situated LECs to which you refer and explain with specificity how they are similar to Petitioners, including information on their respective switch upgrade costs, number of lines in service and type of interconnection with wireless carriers.

**ANSWER: See Exhibit A for the list of similarly situated LECs that have implemented LNP. Further, numerous LECs throughout the country have not requested waivers of their obligation of porting numbers by May 24, 2004. In fact, some LECs in South Dakota did not apply for a waiver or extension and it was represented by Attorney Rogers that these LECs, planned on providing portability by the deadline and, therefore, were not filing for waivers or extensions. Western Wireless Corporation does not have access to specific switch upgrade costs for LEC's in our service area.**

2. At page 10, lines 16-20, and page 11, lines 1-15, you identify other state commissions that have ruled on LEC LNP suspension requests. Identify any other state commissions that have ruled on temporary or permanent LNP suspension requests of which you are aware and indicate how they have ruled.

**ANSWER: A comprehensive list of regulatory filings and decisions related to Local Number Portability can be found at [www.NECA.org](http://www.NECA.org).**

3. At page 12, lines 23-26 and page 13, lines 1-7, you state that "Petitioners have identified only a few technical or feasibility issue in the implementation of local number portability" and list three issues. Identify where each Petitioner identified the alleged issues in its Petition, testimony and discovery responses by page number and where applicable, by line number or question number.

As way of clarification, it does not appear any of the companies claim that LNP would be a requirement that is “technically infeasible” under 47 U.S.C. § 251(f)(2)(A)(iii). However, in response to interrogatory 27 of Western Wireless’ First Set of Interrogatories to the Petitioners, Petitioners either answered that there was no technical infeasibility but that implementing the portability under certain circumstances could be difficult based on the lack of rule makings or be difficult to do so using a local seven digit dialed basis. There exists testimony that has been prefiled by various Petitioners also reiterating these positions. To the extent that this interrogatory requests that every instance of every reference that any of the Petitioners’ 22 witnesses may have made to these three areas must be set forth, the interrogatory is objected to as overly broad and unduly burdensome especially in that it seeks summaries of Petitioners’ own testimony.

4. At page 14, lines 17-22, you state that “the LEC will need to route a call to a ported number to the serving tandem.”
  - a. Identify the serving tandem to which you refer.
  - b. Identify any requirement that LECs must route calls to a ported number to the serving tandem. If you are not aware of any such requirement, indicate so.
  - c. Indicate whether you contend that if the LECs route a call to a number ported to Western Wireless to the serving tandem they would also need to route calls to Western Wireless numbers that are not ported numbers to the serving tandem.

**ANSWER:**

- 4.a) **The Qwest LATA or local tandem to which the trunk group that delivers wireless terminating traffic is connected.**
- 4.b) **Pursuant to federal law and regulation, it is the LEC’s requirement to appropriately route the traffic for ported numbers. There is no specific requirement to route to a serving tandem. This is just one of several methods a carrier can use to deliver local traffic to a ported number. Typically, for low traffic volumes, tandem routing, using common or shared trunk groups, is the most cost efficient means of routing such traffic. It appears that Petitioners used the most costly way to route traffic as the basis for their cost analysis rather than considering other ways of routing.**
- 4.c) **Objection: How calls need to be routed for Western Wireless numbers separate and a part from LNP issues is not relevant in any of these filings and is not likely to lead to the discovery of admissible evidence.**

5. At page 15, footnote 23, you state that the Central Office Code Administration Guidelines published by the Alliance for Telecommunications Industry Solutions “permit a carrier to receive a rate center number assignment and designate a routing point for calls to those numbers that is outside the rate center to which they are assigned.” Do you contend that this requires Petitioners to route calls to a ported number to the serving tandem?

**ANSWER: This reference was provided to indicate that tandem routing practices for local calling are not new to the industry. See also response to Question 4.a.**

6. At page 15, line 6, you state that “[t]his practice is permitted under industry guidelines...”  
To what practice are you referring?

**ANSWER: The practice of identifying separate rating and routing points for NPA-NXXs and properly rating and routing traffic based on those designations.**

7. At page 3, lines 3-7, you state that you have been “actively involved in negotiation of interconnection agreements with most, if not all, of the Petitioners in this case on behalf of Western Wireless” in response to a question as to whether you have any background or familiarity with Western Wireless’ system in South Dakota and any familiarity with the Petitioners’ systems in South Dakota.
- a. Based on your familiarity with the Petitioners’ systems obtained through the interconnection agreement process, do any of the Petitioners route traffic to Western Wireless customers to the serving tandem identified in 4a?
  - b. Does Western Wireless contend that the Petitioners agreed in the interconnection agreements to route traffic to Western Wireless to the serving tandem?
  - c. Does Western Wireless contend that the FCC’s local number portability rules would require parties to an interconnection agreement to route traffic in a manner different from that to which they agreed?

**ANSWER:**

**7.a) Not at this time. Petitioners can, at any time, begin to route traffic to Western Wireless customers to the serving tandem.**

**7.b) No.**

**7.c) No, but nothing prevents Petitioners from amending, by mutual agreement, the interconnection agreements with Western Wireless.**

8. At page 16, lines 9-11, you state that “[t]he facts contained in the Petitions do not meet the standard that would lead one to conclude the economic burden exceeds that ‘typically associated with efficient competitive entry.’” Identify the facts that would meet the standard that would lead one to conclude the economic burden exceeds that typically associated with efficient competitive entry.”

**ANSWER: One method to establish this burden might include demonstration of costs that are extraordinary in comparison to other similarly situated companies that have implemented LNP. Another method may be to demonstrate that a Petitioners financial wherewithal is insufficient to sustain implementation of LNP. Adoption of any new service to the public usually entails some costs. The fact that adoption and providing of new service to the public entails a cost in and of itself would not logically lead to the conclusion that there has been any type of undue economic burden or adverse economic impact. Otherwise, any service that would add costs could be barred under such a test.**

9. At page 16, lines 12-17, you state that you have experience with SOA and LNP queries in response to a question concerning whether you have experience with the real life costs of LNP implementation.

- a. Indicate whether this means you have experience with the cost of SOA and LNP queries.
- b. If you have such experience, indicate the recurring and non-recurring cost associated with SOA and LNP queries.

**ANSWER:**

**9.a) Yes.**

**9.b) Please see Western Wireless' response to question 12 of the First Discovery Requests.**

10. At page 17, lines 11-13, you state that Petitioners have included fees for SOA non-recurring set up charge or non-recurring Service Order Administration "when estimated port volumes provide no justification for an automated SOA interface."

- a. Identify the specific Petitioners to which you refer.
- b. Indicate for each Petitioner identified in 10.a. whether you contend that the Petitioner's cost estimates for an automated SOA interface are unreasonable or whether you contend that an automated SOA cannot be justified, or both.
- c. Indicate whether Western Wireless utilizes an automated SOA.
- d. Indicate the recurring and non-recurring costs paid by Western Wireless for the SOA interface.

**ANSWER:**

**10.a) All Petitioners**

**10.b) We contend that automated SOA is not justified for the low port volume forecasts made by the Petitioners**

**10.c) Although irrelevant to the proceeding, Western does use an automated SOA interface**

**10.d) Objection, this interrogatory calls for information that is irrelevant and not likely to lead to admissible evidence.**

11. At page 17, lines 14-18, you state that "many of the Petitioners have not provided sufficient information in response to interrogatories to address the validity of switch upgrade cost claims at this time." Identify the Petitioners to which you refer.

**ANSWER: All Petitioners that have not provided actual switch vendor quotations.**

12. At page 18, lines 5-15, you state that Beresford Telephone has overstated SOA costs.

Identify all other Petitioners that you contend have overstated SOA costs.

**ANSWER: See response to 10.a.**

13. At page 18, lines 9-11, you state that Beresford can utilize the Number Portability Administration Center Help Desk to perform the SOA function for 24 ports for a total of \$360.

- a. Explain how you arrived at a cost of \$360.
- b. Is the Number Portability Administration Center Help Desk and automated SOA interface?
- c. Does Western Wireless utilize the Number Portability Administration Center Help Desk?
- d. If Western Wireless does not utilize the Number Portability Administration Center Help Desk, explain why it does not and identify the factors that resulted in Western Wireless selecting a different SOA interface.
- e. How long does it take to complete a port using the Number Portability Administration Center Help Desk?
- f. Identify the annual number of port requests that Western Wireless has projected it will make of each of the Petitioners for the years 2004 through 2010.

**ANSWER:**

**13.a) The \$360 figure was estimated by taking the number of ports and multiplying by the estimated per port line charge for SOA services (\$15).**

**13.b) No.**

13.c) Western Wireless does use the Number Portability Administration Center Help Desk in certain situations.

13.d) N/A

13.e) The transaction time for using the Number Portability Administration Center Help Desk is estimated to take less than 2 minutes.

13.f) Please see Exhibit B.

14. At page 19, lines 1-3, you state that “Western Wireless estimates the cost of routing traffic to these ported numbers to be \$1,120 for the year including non-recurring charges.” Explain with specificity how you derived this amount.

**ANSWER:** The estimate was calculated using these inputs:

- A \$400 estimated non-recurring charge for reconfiguration of existing trunk group to Qwest tandem.
- West River estimate of annual ports – 12
- Qwest toll transit rate - \$.003123
- Estimated local calls originated each day on West River network to each ported number – 6
- Estimated average length of local calls originated on West River network to ported numbers – 3.5 minutes
- Assuming a traffic volume estimate after 2.5 years of port activity
  
- The monthly recurring cost was calculated using this formula: (Annual Ports\*2.5 years)\*(local calls per day\*length of calls\*days per month)\*transit rate  
Alternatively:  $(12*2.5)*(6*3.5*30)*0.003123 = \$59.02$  per month x 12 months = \$708

*$NRC$  of \$400 + 12 Months of  $MRC$  of 708 = 1<sup>st</sup> year costs of \$1108*

15. At page 19, lines 1 and 2, you state “[a]ssuming these porting customers to have average incoming call characteristics...”, identify with specificity what are the “average incoming call characteristics” to which you refer.

**ANSWER:** See input assumptions in response 14.

16. At page 19, lines 8-10, you state that you believe the FCC “views that it is the originating carrier’s responsibility to deliver local traffic for termination...”

- a. For each of the Petitioners, identify the calls to Western Wireless numbers by number and routing arrangement, for which Petitioner pays reciprocal compensation to Western Wireless.
- b. Indicate whether you contend that Petitioners would be required to pay reciprocal compensation on calls to numbers ported from the Petitioner to Western Wireless.

**ANSWER:**

**16.a) Objection, the interrogatory is irrelevant and unlikely to lead to admissible evidence and is also overly burdensome and unduly broad in that it seeks information on calling arrangements and number and routing arrangements not related to LNP. Further, each Petitioner would have this information readily available in their existing records.**

**16.b) Yes.**

17. At page 20, lines 5-8, you state that you eliminated switch maintenance cost because LNP does not result in additional increase in this cost. At Addendum D to your Answers to Interrogatories, Local Number Portability Operations Agreement, Section 7.3, states that “[e]ach Party shall monitor and perform effective maintenance through testing and the performance of proactive maintenance activities such as routine testing, development of and adherence to appropriate network trouble isolation processes and periodic review of operational elements for translations, routing and network faults.” Reconcile these two statements.

**ANSWER: Switch maintenance and routing table management should be routine practice that is not altered by Local Number Portability operations.**

18. At page 20, lines 13-15, you state that “[t]he routing methods proposed by the Petitioners are inefficient in that they make little or no utilization of existing equipment and shared facilities currently used to exchange calls with other carriers.” Identify with specificity and for each Petitioner, the “existing equipment and shared facilities currently used to exchange calls with other carriers” to which you refer.

**ANSWER: Trunk groups that currently deliver wireless and other carrier traffic to Petitioners directly from Qwest or any other common/shared trunk group that is connected to the PSTN.**

19. At page 22, lines 18-23 and page 23, lines 1-4, you state that if Petitioners do not implement LNP it will limit wireless to wireless number portability because wireless carriers use numbers assigned to them by LECs.

- a. Are you required to use numbers assigned by LECs? If you contend that you are so required, identify the requirement.
- b. Can Western Wireless obtain its own numbers and not use those assigned by LECs? If you contend that Western Wireless cannot obtain its own numbers, explain why not.

**ANSWER:**

**19.a) No, Western Wireless is not required to use numbers assigned by LECs, however, the Petitioners are required to provide them. Many of Western Wireless’ customers and other wireless customers are currently served by numbers provided by LECs.**

**19.b) Yes, but it would take months and would not resolve porting issues for existing customers.**

20. At page 23, lines 9-11, you state that “Qwest has experienced a substantial loss of customers to competitors since the advent of number portability.”

- a. Identify the basis for this statement.
- b. Identify the number of customers lost by Qwest since the advent of number portability in South Dakota.
- c. Identify the number of customers lost by Western Wireless since the advent of number portability in South Dakota.

**ANSWER:**

**20.a) This statement was based on discussions with CLEC's in South Dakota and on transit billing volume changes for Western Wireless traffic delivered to CLEC CLLIs.**

**20.b) Western Wireless does not have specific customer counts for Qwest line loss in South Dakota.**

**20.c) Objection, this interrogatory calls for information that is irrelevant and not likely to lead to admissible evidence and the question is vague. Without waiving the objection, Western Wireless answers as follows: Western Wireless has experienced people leaving Western Wireless for other wireless providers and people leaving other wireless providers and coming to Western Wireless. Further, Western Wireless has experienced people wishing to leave Western Wireless who have not been able to port their numbers because Petitioners have refused to implement LNP.**

21. At page 25, lines 3-7, you state that "it is unfair that carriers who we compete with, that are similarly obligated, would be exempted from their obligations and thereby limit our ability to recoup the LNP investments we have made by restricting our opportunity to leverage those investments in a competitive marketplace."

- a. Do you believe it would also be unfair if the Petitioners' opportunity to leverage LNP investments was restricted?
- b. Assuming the Petitioners were LNP capable, identify by Petitioner and by rate center all rate centers where Western Wireless would be required to port numbers from Western Wireless to the Petitioner.

**ANSWER:**

**21.a) To the extent that Petitioners have to abide by the same coverage and rate center rules as other carriers, Yes.**

**21.b) Western Wireless would be obligated to port numbers where the Petitioner provides service.**

22. At Exhibit 5A and 5B of your testimony, you list recurring and non-recurring transport costs for some Petitioners. For each Petitioner, explain how the recurring and non-recurring transport cost was derived. If no transport cost is listed for a Petitioner, explain why not.

**ANSWER: Non-recurring costs in Exhibit 5A and 5B are, for the most part, those costs provided by the Petitioners. Any modifications made to these costs are explained in my testimony. Recurring costs in Exhibit 5A and 5B were developed as follows:**

**SOA: Ports per year / 12 months x \$15 Neustar (NPAC) help desk fee per port.**

**LNP Query: Cost provided by Petitioners or access lines in service x six originating calls per day x 30 days x .00075 per query**

**If no transport cost is listed for a Petitioner, the Petitioner has indicated they will have no numbers ported from their network.**

23. At the conference call sponsored by the South Dakota Commission on June 1, 2004, Western Wireless stated that the testimony and exhibits of Ron Williams include “general” and “company specific” portions. Identify by page and line number the parts of Mr. Williams' testimony that are “general” and the parts that “company specific.” Also identify the Exhibits or parts thereof that are “general” and the ones that are “company specific.” For the testimony and Exhibits that are company specific, identify the company to which they apply.

**ANSWER: These terms were used in regard to comments made during that meeting that Mr. Watkins constitutes a general expert and the costs experts were considered cost company specific experts. In that regard, all the testimony of Ron Williams replying to the issues raised by Mr. Watkins should be considered general testimony applying to policy**

and other issues raised by Mr. Watkins. Regarding company specific, the cost testimony of Williams is specific for each petitioner in that it replies to the specific cost testimony submitted by each petitioner. To the extent that the cost testimony could be argued to also apply to the public interest, convenience and necessity issues, the cost analysis is presented for that matter. The same would be said for the testimony of technical difficulties in implementing LNP. Namely, the technical testimony is directed at each petitioner specifically but may also be regarded as applying to general testimony regarding implementation issues.

24. Do you contend that imposing the LNP obligations on Petitioners is not unduly economically burdensome? If your answer to the preceding interrogatory is in the affirmative, please state the following with respect to each Petitioner:

- a. State in detail each fact, matter and circumstance upon which you rely to support your answer.
- b. Identify each person having knowledge of the facts that support your answer and state the substance of their knowledge.
- c. Identify all documents upon which you rely which support you're answer.

**ANSWER: Yes.**

**24.a) Petitioners have failed in their burden to show undue economic burden in their refusal to provide their cost documents received from vendors. Refusal of the Petitioners to provide such documents makes it impossible to make a conclusion that undue economic burden exists. Further, Petitioners all have the financial ability to pay for LNP. See also responses to interrogatory 8 above.**

**24.b) Petitioners and their witnesses.**

**24.c) Discovery to date and prefiled testimony of Petitioners.**

25. On page 25, lines 1-3 of Mr. Williams' testimony, he states that "We have upgraded our network, implemented new processes, systems, and hired supporting resources to implement LNP in South Dakota. In other words, we have absorbed the costs of implementing LNP

under our FCC obligations.” Please list the cost Western Wireless has incurred for these various items in South Dakota.

**ANSWER: Objection, as this interrogatory calls for information that is not relevant or likely to lead to admissible evidence, unduly burdensome and overly broad and vague. Without waiving said objection, Western Wireless answers as follows: Such costs are not kept by State.**

## **B. DOCUMENT PRODUCTION**

1. At page 13, lines 15-21, you cite the testimony of Steven D. Metts. Provide a complete copy of Mr. Metts’ testimony that includes the cited language.

**ANSWER:**

**1) Q. “On Page 2 Line 21, beginning on 20 and 21 you state the purpose of your testimony. Is it your contention that suspension of the FCC requirements is based upon technological incapability for any of your companies?”**

**A. “No.”**

**See attached Exhibit C.**

2. Provide all documents referenced in your responses to Interrogatories 1-25.

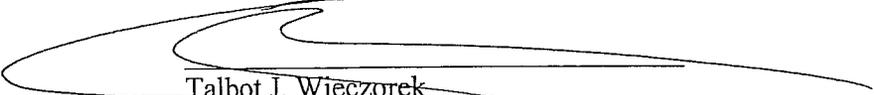

**ANSWER: Documents previously provided otherwise. Also, see attached Exhibits A, B and C.**

Dated this 11 day of June, 2004.

1 implementation.

2 Q. Do you have any sense or any feel for what  
3 the additional charges incurred by each of these  
4 companies is?

5 A. No. Those companies withdrew before we had  
6 the data request for the costs and did not submit any  
7 costs to me.

8 Q. On Page 2 Line 21, beginning on 20 and 21 you  
9 state the purpose of your testimony.

10 Is it your contention that suspension of  
11 the FCC requirements is based upon technological  
12 incapability for any of your companies?

13 A. No.

14 Q. If you would, turn to Page 5, as well.

15 A. (Witness complies.)

16 Q. When was the FCC Order -- referring to Page  
17 5, when was the FCC Order issued?

18 A. November 10th, 2003.

19 Q. So all of the NMECG members have known since  
20 then that they were going to have to be within  
21 compliance?

22 A. Yes.

23 Q. When did ENMR and ValleyTel apply for a  
24 request of waiver to the FCC?

25 A. I don't know that.

Re: Reciprocal Interconnection, Transport and Termination Agreement between  
Interstate Telecommunications Cooperative, Inc. and WWC License LLC (West-  
ern Wireless)

Dear Ms. Bonrud:

Pursuant to 47 U.S.C. § 252(e), Interstate Telecommunications Cooperative, Inc. and  
Western Wireless hereby jointly submit and request Commission approval of the at-  
tached "Reciprocal Interconnection, Transport and Termination Agreement." This  
agreement was voluntarily negotiated and has been executed by both parties. The par-  
ties believe the agreement meets the standards applicable to such agreements set forth in  
Section 252(e)(2) and, accordingly, urge its prompt approval by the Commission.

In accord with Staff directions, I am enclosing <sup>10</sup> ~~three~~ copies of the Agreement.

If there are any questions or any further action is needed by either of the parties please  
feel free to contact me at 605-224-7889, or Ron Williams of Western Wireless at 425-  
586-8360.

Sincerely yours,

Darla Pollman Rogers  
Attorney at Law

Enclosures

## **RECIPROCAL INTERCONNECTION, TRANSPORT AND TERMINATION AGREEMENT**

This Reciprocal Interconnection, Transport and Termination Agreement ("Agreement") is entered into by and between Interstate Telecommunications Cooperative, Inc. ("the Telephone Company"), and WWC License L.L.C. ("the CMRS Provider"). The Telephone Company and the CMRS Provider are each individually a "Party" and are together the "Parties" to this Agreement.

WHEREAS, the Telephone Company is an Incumbent Local Exchange Carrier which is operating as a Rural Telephone Company in the State of South Dakota;

WHEREAS, the CMRS Provider is licensed by the Federal Communications Commission ("FCC") as a Commercial Mobile Radio Service Provider;

WHEREAS, the Telephone Company and the CMRS Provider desire to establish arrangements between one another for the exchange of telecommunications traffic between their respective networks for the benefit of the Parties and their customers.

WHEREAS, the Parties wish to put in place an arrangement for the mutual exchange and reciprocal compensation of telecommunications traffic in accordance with Section 251(b)(5) of the Telecommunications Act of 1996.

WHEREAS, the Parties agree that their entry into this Agreement is without prejudice to and does not waive any positions they may have taken previously, or may take in the future, in any legislative, regulatory, judicial or other public forum addressing any matters related to the same types of arrangements covered in this Agreement, and;

NOW, THEREFORE, in consideration of the foregoing and the undertakings contained herein, and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Telephone Company and the CMRS Provider agree as follows:

This Agreement sets forth the terms, conditions and prices under which (a) the Parties agree to directly interconnect the networks of the CMRS Provider and the Telephone Company for the purposes of the exchange of telecommunications traffic between the Parties' networks or (b) the Parties will transport and terminate the telecommunications traffic originated by the other Party and delivered via the network of a Third Party Provider. This Agreement is not intended to establish any terms, conditions, or pricing applicable to the provisioning of any transiting service.

Except as otherwise expressly provided for herein, this Agreement does not obligate either Party to provide arrangements or transport or terminate traffic not specifically provided for herein. Except as otherwise expressly provided for herein, this Agreement has no effect on the definition of End User services that either Party offers to its End User Customers, the services either Party chooses to offer to its respective End User Customers, the rate levels or rate structures that either Party charges its End Users for services, or the manner in which either Party provisions or routes the services either Party provides to its respective End User Customers.

This Agreement is not, however, intended to address any issues or disagreements that may exist between the Parties concerning the interpretation and application of provisions found in 47

U.S.C. § 332(c) and whether CMRS Provider, in providing certain wireless communications services, is subject to Commission regulation, including, but not limited to regulations requiring providers of local exchange type services to seek a certificate of authority from the Commission prior to offering such services.

Further, this agreement does not address the additional service obligations imposed on incumbent local exchange carriers pursuant to 47 U.S.C. § 251(c) and is based on a request for services pursuant to 47 U.S.C. §§ 251(a) and 251(b). By this Agreement neither Party waives any rights it may have under the Federal Act or rules of the FCC, under state statute, or pursuant to rules of the Commission. Such rights may include CMRS Provider's right to request a review of the rural telephone company exemption provided for under 47 U.S.C. § 251(f) and South Dakota Codified Laws § 49-31-79 and Telephone Company's right to seek to maintain the exemption.

The Parties further agree and understand that the per minute reciprocal transport and termination rates set forth in Appendix A to this Agreement are not based on a specific costing methodology or company specific cost study.

## 1.0 Definitions

Definitions of the terms used in this Agreement are listed below. The Parties agree that certain terms may be defined elsewhere in this Agreement, as well. Terms not defined shall be construed in accordance with their customary meaning in the telecommunications industry as of the effective date of this Agreement.

"Act" means the Communications Act of 1934 (47 U.S.C. Section 151 et seq.), as amended.

"Cell Site" means the location of radio transmitting and receiving facilities associated with the origination and termination of wireless traffic to a wireless End User.

"Commercial Mobile Radio Service" or "CMRS" has the meaning given to the term in the Act.

"Commission" means the South Dakota Public Utilities Commission.

"Conversation Time" means the time (in full second increments) that both Parties' equipment is used for a call, measured from the receipt of answer supervision to disconnect supervision.

"EAS Service Area" means a group of two or more exchanges, as defined in the Telephone Company's local exchange tariff or as implemented through Telephone Company practice, among which a Telephone Company Customer of either exchange may make landline-to-landline calls without incurring a toll charge.

"End Office" means a local Telephone Company switching point where the Telephone Company customer station loops are connected for purposes of interconnection to each other and to the network.

"End User" means, whether or not capitalized, any business, residential or governmental Customer of services provided by a Party, and includes the term "Customer" and "Subscriber". More specific meanings of either of such terms are dependent upon the context in which they appear in the Agreement and the provisions of the Act.

"FCC" means the Federal Communications Commission.

"Incumbent Local Exchange Carrier or Incumbent LEC" has the meaning given the term in the Act.

"Indirectly Connected" refers to a network arrangement in which the networks of the Parties are connected through a Third Party Provider's facilities.

"Interconnection" refers to the connection of separate pieces of equipment, facilities, or platforms between or within networks for the purpose of transmission and routing of Telecommunications.

"Inter-exchange Carrier" or "IXC" means a telecommunications carrier that provides toll telephone service, as the latter term is defined in the Act.

"InterLATA Service" has the meaning given the term in the Act.

"InterMTA traffic" means all wireless to wireline calls, which originate in one MTA and terminate in another MTA based on the location of the connecting cell site serving the wireless end user and the location of the end office serving the wireline end user.

"Local Traffic," for purposes of this Agreement, means: (1) for wireless to wireline calling, traffic exchanged between the CMRS Provider and the Telephone Company that, at the beginning of the call, originates and terminates within the same MTA based on the location of the connecting cell site serving the originating wireless end user and the location of the end office serving the terminating wireline end user; and (2) for wireline to wireless calling, traffic exchanged between the Telephone Company and the CMRS Provider that originates in a Telephone Company exchange and terminates to a CMRS Provider NXX that has its rate center within the Telephone Company exchange or within the Local Calling Area as set forth in Appendix B to this Agreement.

"Mobile Switching Center" or "MSC" means a CMRS Provider's facilities and related equipment used to route, transport and switch commercial mobile radio service traffic to and from and among its end Users and other telecommunications carriers.

"Major Trading Area" or "MTA" has the meaning given to the term in 47 CFR Section 24.202(A).

"NXX", "NXX Code", "Central Office Code", or "CO Code" is the 3-digit switch indicator that is defined by the D, E, and F digits of a 10-digit telephone number within the NANP. Each NXX Code contains 10,000 telephone numbers.

"Party" means either the CMRS Provider or the Telephone Company, and "Parties" means the CMRS Provider and the Telephone Company.

"Point of Interconnection" or "POI" means a physical location where the Telephone Company and the CMRS Provider interconnect their respective networks thereby establishing the technical interface and points for operational division of responsibility.

"Tandem" means a switching system that, through a trunk-to-trunk connection, provides a concentration and distribution function for originating or terminating traffic between end offices, other tandems and Third Party Providers'.

"Telecommunications" has the meaning given in the Act.

"Telecommunications Carrier" has the meaning given in the Act.

"Termination" means the switching of Traffic at the terminating carrier's end office switch, or equivalent facilities, and delivery of such traffic to the called party.

"Third Party Provider" shall mean any facilities-based telecommunications carrier, including, without limitation, Interexchange Carriers, independent telephone companies, competitive local exchange carriers, or CMRS Providers that carries transiting traffic. The term shall not mean resellers of a LEC's local exchange services or resellers of a CMRS Provider's services.

"Traffic" includes Local Traffic and InterMTA Traffic.

"Transport" means the transmission of traffic from the POI between the two Parties or from the interconnection point of the Third Party Provider and a Party to the Party's switch that directly serves the called party. In the case of a Type 2A connection Transport includes Tandem Switching.

"Trunk Group" means a set of trunks of common routing, origin and destinations, and which serve a like purpose or function.

"Trunk Side" means a Party's connection that is capable of, and has been programmed to treat the circuit as, connecting to another switching entity, for example another Telephone Company to CMRS Provider switch. Trunk Side connections offer those transmission and signaling features appropriate for the connections of switching entities.

## 2.0 Description of Traffic

2.1 This agreement applies both to Local and to interMTA traffic originated by the End User subscribers of one Party and terminated to end-user subscribers of the other Party which is (a) delivered over facilities owned or controlled by the Parties, which directly interconnect the Parties or, (b) indirectly connected, i.e., delivered over a Third Party Provider's transiting facilities. Local Traffic is subject to local Transport and Termination charges as described in Appendix A. InterMTA Traffic is subject to Telephone Company's interstate or intrastate access charges.

2.2 The Parties recognize that the Federal Communications Commission issued its Order on Remand and Report and Order on Intercarrier Compensation for ISP-bound Traffic in its Docket No. 96-98 on April 27, 2001, and that Telephone Company and various other parties have filed appeals of that Order. The Parties agree that ISP-bound traffic between them, if any, is presently de minimus. If a Party has reason to believe that enhanced service and Internet traffic is not de minimus, that Party may reopen negotiations to determine an appropriate method for identifying such traffic, and, so long as the FCC Order referred to above is final and outstanding, such traffic above a de minimus level shall be transported and terminated in accord with the interim compensation regime established by the FCC in the Order. If Telephone Company, with respect to traffic originated by its incumbent LEC subscribers, elects to invoke the rate cap for ISP-bound traffic established in the FCC's Order on Remand and Report and Order on Intercarrier Compensation for ISP-bound Traffic in its Docket No. 96-98 with respect to any telecommunications carrier, the Telephone Company and the CMRS Provider will begin exchanging all Local Traffic at the capped rate on the effective date of the implementation of the rate cap.

### 3.0 Direct Interconnection of the Party's Facilities Where a Third Party Provider Is Not Utilized

This Section describes the network architecture with which the Parties to this Agreement may interconnect their respective networks for the Transport and Termination of traffic.

#### 3.1 Interconnection Facilities

- 3.1.1 Type 1 Interconnection: Facilities which provide line side connections between a Telephone Company end office and the CMRS Provider's POI within that end office boundary. Type 1 facilities provide the capability to exchange traffic between the CMRS Provider subscribers and Telephone Company subscribers served only by that Telephone Company end office and other end offices within the Local Calling Area as designated in Appendix B, subject to the capabilities and use of the interconnection as described in Exhibit 1 attached to this Agreement.
- 3.1.2 Type 2A Interconnection: Facilities which provide a trunk side connection between the CMRS Provider and a Telephone Company End Office or Tandem switch that is capable of trunk to trunk switching, as specified in Appendix B. The CMRS Provider's POI must be located within the Telephone Company's exchange boundary of that Telephone Company End Office or Tandem switch. Type 2A facilities provide the capability for the CMRS provider with a NPA-NXX in that rate center to exchange traffic between the CMRS provider subscribers and Telephone Company subscribers served only by that Telephone Company end office and other end offices subtending the switch where the Type 2A connection is established.
  - 3.1.2.1 For CMRS traffic terminating to the Telephone Company, the Telephone Company will terminate traffic from the POI to any end user in the intra-company exchanges that subtend the Tandem/Intermediate/Host office (as specified in Appendix B) where the CMRS Provider is directly connected.
  - 3.1.2.2 Only Local Traffic originating from the Telephone Company end users in the LEC Local Calling Area (as specified in Appendix B) will be delivered by the Telephone Company to the CMRS Provider POI.
- 3.1.3 Type 2B Interconnection: Facilities which provide a trunk side connection between the CMRS Provider and the Telephone Company end office. The CMRS Provider's POI must be located within the Telephone Company's end office exchange boundary of that Telephone Company end office. Type 2B facilities provide the capability for the CMRS Provider with a NPA-NXX in that rate center to exchange traffic between the CMRS Provider subscribers and the Telephone Company-subscribers served only by that Telephone Company end office and other end offices within the Local Calling Area as designated in Appendix B, subject to the capabilities and use of the interconnection as described in Exhibit 1 attached to this Agreement.
- 3.1.4 The Parties shall provide each other a forecast of projected mobile to land or land to mobile usage for each point of interconnection when significant changes in

traffic patterns are anticipated. The Parties agree to work cooperatively to determine the number of trunks needed to handle the estimated traffic. Upon mutual agreement of the Parties, Type 1, Type 2A, and Type 2B facilities may be either one-way or two-way.

3.1.4.1 When both Parties agree to utilize and implement two-way facilities, charges will be shared by the Parties on a proportional percentage basis as specified in Appendix A "Shared Facility Factor". The Parties shall review actual minutes capable of being transported on shared two way facilities and modify the percentages specified in Appendix A three months from the Executed Date of this Agreement and every twelve months thereafter. The modified percentages shall be used to true-up, on a going forward basis, the charges between the Parties.

3.1.4.2 When both Parties agree to utilize one-way facilities in the land-to-mobile direction or in the event that Western Wireless chooses to implement only one-way land-to-mobile facility use, charges will be shared by the Parties on a proportional percentage basis as specified in Appendix A 7.0 "Shared Facility Factor". In the event Western Wireless subsequently implements mobile-to-land use of these facilities, the provisions of 3.1.4.1 shall apply.

## 3.2 Facility Locations

### 3.2.1 Technical Feasibility

3.2.1.1 Appendix B contains the existing POIs established between the Parties. The CMRS Provider and Telephone Company may establish additional POIs, from time to time, in accordance with this Agreement. Appendix B also contains information on the other locations where direct interconnection with the Telephone Company's network may be requested.

3.2.1.2 Both Parties recognize the Telephone Company may make modifications to its network architecture, NPA-NXX utilization, or Local Calling Area that impact the "Interconnection and Local Calling Data" contained in Appendix B. In the event the Telephone Company intends to make modifications that impact Appendix B, the Telephone Company will provide 90 days advance notice of any such modifications to CMRS Provider where such modifications will impact traffic routed over direct interconnect facilities.

### 3.2.2 Incumbent LEC Requirement

3.2.2.1 The Parties acknowledge that the services provided by Telephone Company under this Agreement are provided pursuant to the Telephone Company's obligations falling under 47 U.S.C. § 251(a) and 251(b) and that terms and conditions specified in this Agreement do not apply to the provision of services or facilities by the Telephone Company in those areas where the Telephone Company is not the incumbent LEC.

## 3.3 Additional Interconnection Methods Available to the CMRS Provider

- 3.3.1 The CMRS Provider may provide its own facilities and transport for the delivery of traffic from its MSC (or other mutually agreed upon point on the CMRS Provider's network) to the POI on the Telephone Company's network. Alternatively, the CMRS Provider may purchase an entrance facility and transport from a Third Party Provider or from the Telephone Company for the delivery of such traffic. Rates for entrance facilities and transport purchased from the Telephone Company are specified in the Telephone Company's Interstate Access Service Tariff or Intrastate tariff or pricing catalog.
- 3.3.2 The Parties may share the Telephone Company's interconnection facilities at the rates specified in applicable tariffs. Charges will be shared by the Parties based on their proportional (percentage) use of such facilities as specified in Appendix A Shared Facility Factor.

#### 3.4 Technical Requirements and Standards

- 3.4.1 Each Party will provide the services in this Agreement to the other Party under reasonable and non-discriminatory conditions and at a standard that is at least equal in quality and performance to that which the Party provides to other connecting carriers. Either Party may request and the other Party will provide, to the extent technically feasible, services at a higher or lesser standard, provided however, that any such requests shall be considered a special request, and will be handled on a case-by-case basis.
- 3.4.2 Nothing in this Agreement will limit either Party's ability to modify its network, including, without limitation, the incorporation of new equipment and new software. Each Party will provide the other Party reasonable written notice, of any such modifications to its network, which will materially impact the other Party's service. Each Party will be solely responsible, at its own expense, for the overall design of its telecommunications services and for any redesigning or rearrangement of its telecommunications services which may be required as a consequence of this Agreement, including, without limitation, changes in facilities, operations or procedures, minimum network protection criteria, or operating or maintenance characteristics of facilities. These provisions shall not in any way affect the application of special construction charges of the Telephone Company, for the construction of new facilities, where such charges would otherwise be applicable in provisioning the new or additional service.

#### 4.0 Transmission and Routing of Traffic

This Section provides the terms and conditions for the exchange of traffic between the Parties' respective networks for the transmission and routing by the Parties of wireless Traffic.

##### 4.1 Mobile to Land Traffic – Directly Interconnected

- 4.1.1 The CMRS Provider shall be responsible for the delivery of Traffic from its Network to the appropriate Point of Interconnection on the Telephone Company's network, as set forth in Appendix B, for the Transport and Termination of such traffic by the Telephone Company to one of its End Users.

4.1.2 If the CMRS Provider chooses to use the Telephone Company's services or facilities, not otherwise covered under this Agreement, appropriate tariff or pricing catalog rates, or rates established under separate agreement will apply.

#### 4.2 Land to Mobile Traffic – Directly Interconnected

4.2.1 The Telephone Company with which CMRS Provider has directly connected shall be responsible for the delivery of traffic from its End Users in the "Local Calling Area" connected to its network to the appropriate Point of Interconnection (within the exchange boundary of the end office in which the tandem, providing Type 2A Interconnection, is located, or within the exchange boundary of the end office providing Type 1 and/or Type 2B Interconnection) on the CMRS Provider's network for the Transport and Termination of such traffic by the CMRS Provider to its End User.

4.2.2 Telephone Company agrees that its landline customers will dial CMRS provider NPA-NXXs on a local basis, so long as the CMRS Provider NPA-NXX has been assigned by the North American Numbering Plan Administrator (NANPA) to an end office rate center in which a POI is physically located, and provided such local access is consistent with the capabilities and use of the direct interconnection established as described in Exhibit 1 to this Agreement. When the Parties are directly connected, Telephone Company agrees to deliver all such locally-dialed traffic to CMRS Provider at that Point of Interconnection with the CMRS Provider.

#### 4.3 Mobile to Land - Indirectly Connected via a Third Party Provider.

As an alternative to routing traffic covered by this Agreement through a Point of Interconnection, the CMRS Provider may choose to deliver traffic from its network to the Telephone Company via a Third Party Provider and thus be indirectly connected with the Telephone Company for the delivery of traffic originated on the CMRS Providers' network by the CMRS Providers' End Users.

#### 5.0 Transport and Termination Compensation

5.1 Rates - The CMRS Provider and the Telephone Company shall reciprocally and symmetrically compensate one another for Local Traffic terminated on either Party's network. The rates at which the Parties shall compensate each other for the Transport and Termination of Traffic are set forth in Appendix A hereto.

5.1.1 Telephone Company's access charges apply to the termination of InterMTA traffic.

5.1.2 The rates applicable to Local Traffic are set forth in Appendix A.

5.1.3 The Transport and Termination Services provided hereunder are intended for wireless to wireline or wireline to wireless, but not wireline to wireline communications. Such services will not be used to terminate other types of traffic on Telephone Company's network (such as wireline originated traffic) and services used in violation hereof shall constitute a breach of this Agreement. In addition to any other remedies available, the Party whose services have been

improperly used shall be entitled to recover the appropriate charges for such traffic for the entire period of misuse.

5.2 De Minimus Traffic - In the event the Traffic terminated on the Telephone company's network is de minimus such that the total minutes for compensation is less than 3,000 minutes of use for a three month period (or 1,000 minutes of use for a one month period if the Telephone Company bills monthly), the Parties agree that the Telephone Company shall not render a billing. It is agreed that the only compensation for that de minimus Traffic will be in the form of the reciprocal Transport and Termination services provided by the other Party, i.e., Traffic will be exchanged on a bill and keep basis, and no billing will be issued by the Telephone Company.

5.3 Conversation Time - For purposes of billing compensation, billed minutes will be based upon Conversation Time. Conversation Time will be determined (a) from actual usage recordings by the Parties or (b) records of terminating traffic provided by the Third Party Provider.

5.4 Measuring traffic - In order to determine whether traffic exchanged between the Parties' networks is Local or InterMTA traffic for purposes of determining compensation, the Parties agree to define the customer location as follows: for Telephone Company, the origination or termination point of a call shall be the Telephone Company's end office which serves, respectively, the calling or called End User. For CMRS Provider, the origination or termination point of a call shall be the connecting cell site, which serves, respectively, the calling or called party at the time the call begins.

6.0 Transmission and Routing of Other Types of Traffic

The Parties agree that this Agreement does not provide for the exchange of 911/E911 traffic and that if such service is requested by the CMRS Provider that the Parties will negotiate a separate Agreement for such traffic.

Other ancillary traffic including wireless traffic destined for ancillary services including, but not limited to, directory assistance, operator call termination (busy line interrupt and verify), 800/888, LIDB, and information services requiring special billing will be exchanged and charged in accordance with the appropriate tariffs, local or switched access.

7.0 Responsibilities of the Parties:

7.1 Verification Reviews

7.1.1 The Parties will be responsible for the accuracy and quality of the data as submitted to the other Party. Upon reasonable written notice, either Party or its authorized representative shall have the right to conduct a review and verification of the other Party's data to give assurances of compliance with the provisions of this Agreement. The review will consist of an examination and verification of data involving records, systems, procedures and other information related to the services performed by the Party as related to settlement charges or payments made in connection with this Agreement. Each Party, whether or not in connection with an on-site verification review, shall maintain reasonable records for a minimum of twelve (12) months and provide the other Party with reasonable access to such information as is necessary to determine amounts receivable or payable under this Agreement.

7.1.2 Either Party's right to access information for verification review purposes is limited to data not in excess of twelve (12) months in age. Once specific data has been reviewed and verified, it is unavailable for future reviews. Any items not reconciled at the end of a review will, however, be subject to a follow-up review effort. Any retroactive adjustments required subsequent to previously reviewed and verified data will also be subject to follow-up review. Information of the Party involved with a verification review shall be subject to the confidentiality provisions of this Agreement.

7.1.3 The Party requesting a verification review shall fully bear its costs associated with conducting a review. The Party being reviewed will provide access to required information, as outlined in this section, at no charge to the reviewing Party. Should the reviewing Party request information or assistance beyond that reasonably required to conduct such a review, the Party being reviewed may, at its option, decline to comply with such request or may bill actual costs incurred in complying subsequent to the concurrence of the reviewing Party.

## 7.2 Billing

7.2.1 For directly connected arrangements between the Parties, the Telephone Company shall issue its bill to CMRS Provider based on actual usage recordings. For arrangements involving a Third Party Provider, the Telephone Company shall issue its bill based on the best information available including, but not limited to, records of terminating traffic created by the Telephone Company.

7.2.2 When a Third Party Provider indirect connected arrangement is used by the CMRS Provider to deliver traffic to the Telephone Company the Telephone Company may use its terminating records or usage reports and/or records (such as category 11-01-0-1 records) generated by a Third Party Provider whose network is used to indirectly connect the traffic as the basis for billing the CMRS Provider.

7.2.3 For billing purposes, if either Party is unable to classify on an automated basis the traffic delivered by CMRS as local traffic or interMTA traffic, a Percent InterMTA Use (PIU) factor will be used, which represents the estimated portion of interMTA traffic delivered by CMRS provider.

The initial PIU factor to be applied to total minutes of use delivered by the CMRS Provider shall be 3.0%. This factor shall be adjusted three months after the executed date of this Agreement and every six months thereafter during the term of this Agreement, based on a mutually agreed to traffic study analysis. Each of the Parties to this Agreement is obligated to proceed in good faith toward the development of a method of traffic study that will provide a reasonable measurement of terminated InterMTA traffic.

A Reciprocal Compensation Credit shall be calculated and applied to the billing from Telephone Company to the CMRS Provider to provide compensation for wireline to wireless traffic that the CMRS Provider receives from Telephone Company for termination. The amount of this credit shall be determined by applying the Reciprocal Compensation Credit formula set forth in Appendix A. The Reciprocal Compensation Credit will appear on the monthly or quarterly bill issued by Telephone Company as a credit against amounts due and payable from CMRS Provider to Telephone Company.

7.2.4 The Parties shall pay each other for all charges in accordance with the rates set forth in Appendix A of this agreement. Such payments are to be received within 30 days from the receipt of the billing statement: Undisputed charges, not paid within the 30 days from the receipt of the billing statement may be subject to a late charge at the rate of 1.5% per month or the maximum amount allowed by law. The Party collecting revenues shall be responsible for reporting and remitting all applicable taxes associated therewith.

7.2.5 Each Party will bear its own billing and collection expenses. In the event the CMRS Provider fails to send calling party number and/or other industry standard call record fields sufficient to identify CMRS Provider as the originating carrier for each Third Party Provider transit call terminated to the Telephone Company, CMRS provider will reimburse the Telephone Company for any Third Party Provider Call Detail Record (CDR) charges associated with those CMRS Provider usage records.

CMRS Provider agrees to pursue a joint process (negotiation, complaint, etc.) against Qwest with the intent of requiring Qwest to either transmit appropriate call data as part of their transit function or provide summary monthly terminating traffic reports to the Telephone Company which show the originating carrier and which would be workable for billing purposes.

7.2.6 If either Party disputes a billing statement issued by the other Party, the disputing Party shall notify the billing Party in writing regarding the nature and the basis of the dispute within thirty (30) days of the receipt of the statement. The Parties shall diligently work toward resolution of all billing issues

### 7.3 Network Maintenance and Management for Direct Interconnection

The Parties will work cooperatively to install and maintain reliable network facilities. The Parties will exchange appropriate information to achieve this desired reliability, subject to the confidentiality provisions herein.

7.3.1 Party shall provide a 24-hour contact number for network traffic management issues to the other's surveillance management center. A fax number must also be provided to facilitate notifications for planned mass calling events.

7.3.2 Neither Party will use any service provided under this Agreement in a manner that impairs the quality of service to other carriers or to either Party's subscribers. Either Party will provide the other Party notice of said impairment at the earliest practicable time.

7.3.3 Use of the CMRS Providers' facilities, or that of a third party in conjunction with any of the Telephone Company's facilities, shall not materially interfere with or impair service over any facilities of the Telephone Company, its affiliated companies or its connecting and concurring carriers involved in its services, cause damage to their plant, impair the privacy of any communications carrier over their facilities or create hazards to the employees of any of them or the public. Upon reasonable written notice and opportunity to cure, the Party whose facilities are being used may discontinue or refuse service to the other Party if the Party using the facilities violates this provision; provided, that such termination of service will be limited to the facilities being used that is subject of the violation.

7.3.4 Maintenance of Service Charge - When one Party reports trouble to the other Party for clearance and no trouble is found in the second Party's network, the reporting Party shall be responsible for payment of a Maintenance of Service Charge for the period of time when the second Party's personnel are dispatched. In the event of an intermittent service problem that is eventually found to be in the second Party's network, the reporting Party shall receive a credit for any Maintenance of Service Charges applied in conjunction with this service problem.

If a Party reports trouble to the other Party for clearance and the other Party's personnel are not allowed access to the reporting Party's premises, the Maintenance of Service Charge will apply for the time that the non-reporting Party's personnel are dispatched; provided that the Party's have arranged a specific time for the service visit.

7.4 Access to Numbering Resources – For Type 1 connections, the Telephone Company will provide the CMRS Provider access to numbering resources in the same fashion as they are provided to other Telecommunications Carriers.

7.5 Local Dialing Parity - The Telephone Company agrees that local dialing parity will be available to the CMRS Provider in accordance with the law to the same extent as it is available to other Telecommunications Carriers. The Telephone Company will not be responsible for Local Exchange Routing Guide ("LERG") entry.

The Parties agree that local and EAS dialing available to CMRS Provider NXXs will be as specified in Appendix B. Telephone Company agrees to provide Notice, according to Section 14.13, for any additions or deletions of rate centers associated with local calling area or EAS. Accordingly, the parties agree that the information contained in Appendix B pertaining to "Local Calling Areas", subsequent to such Notice, may be revised during the term of this Agreement.

8.0 Liability and Indemnification

8.1 Except as otherwise expressly provided herein or in specific appendices, each Party shall be responsible only for the Interconnection, functions, products and services which are provided by that Party, its authorized agents, subcontractors, or others retained by such parties, and neither Party shall bear any responsibility for the Interconnection, functions, products and services provided by the other Party, its agents, subcontractors, or others retained by such parties.

8.2 Each Party shall be indemnified and held harmless by the other Party against claims, losses, suits, demands, damages, costs, expenses, including reasonable attorney's fees ("Claims"), asserted, suffered, or made by third parties arising from (i) any act or omission of the indemnifying Party in connection with its performance or non-performance under this Agreement; (ii) actual or alleged infringement by the indemnifying Party of any patent, trademark, copyright, service mark, trade name, trade secret or intellectual property right (now known or later developed), and (iii) provision of the indemnifying Party's services or equipment, including but not limited to claims arising from the provision of the indemnifying Party's services to its End Users (e.g., claims for interruption of service, quality of service or billing disputes). Each Party shall also be indemnified and held harmless by the other Party against Claims of persons for services furnished by the indemnifying Party or by any of its subcontractors, under worker's compensation laws or similar statutes.

- 8.3 A Party (the "Indemnifying Party") shall defend, indemnify and hold harmless the other Party ("Indemnified Party") against any claim or loss arising from the Indemnifying Party's use of Interconnection, functions, products and services provided under this Agreement involving:
- 8.3.1 any Claim for libel, slander, invasion of privacy, or infringement of Intellectual Property rights arising from the Indemnifying Party's or its Customer's use.
  - 8.3.2 any claims, demands or suits that asserts any claim for libel, slander, infringement or invasion of privacy or confidentiality of any person or persons caused or claimed to be caused, directly or indirectly, by the other Party's employees and equipment associated with the provision of any service herein. The foregoing includes any Claims or Losses arising from disclosure of any Customer-specific information associated with either the originating or terminating numbers used to provision Interconnection, functions, products or services provided hereunder and all other Claims arising out of any act or omission of the Customer in the course of using any Interconnection, functions, products or services provided pursuant to this Agreement.
  - 8.3.3 any and all penalties imposed on either Party because of the Indemnifying Party's failure to comply with the Communications Assistance to Law Enforcement Act of 1994 (CALEA).
- 8.4 Neither Party makes any warranty, express or implied, concerning either Party's (or any third party's) rights with respect to intellectual property (including without limitation, patent, copyright and trade secret rights) or contract rights associated with either Party's right to interconnect. Nothing in this Section will be deemed to supersede or replace any other agreements, if any, between the Parties with respect to either party's intellectual property or contract rights.
- 8.5 Each Party ("Indemnifying Party") shall reimburse the other Party ("Indemnified Party") for damages to the Indemnified Party's equipment, Interconnection trunks and other property utilized to provide Interconnection hereunder caused by the negligence or willful act of the Indemnifying Party, its agents, subcontractors or Customer or resulting from the Indemnifying Party's improper use of the Indemnified Party's equipment, Interconnection trunks or other property, or due to malfunction of any functions, products, services or equipment of the Indemnifying Party or of any other party that have been provided to the Indemnifying Party. Upon reimbursement for damages, the Indemnified Party will cooperate with the Indemnifying Party in prosecuting a claim against the person causing such damage. The Indemnifying Party shall be subrogated to the right of recovery by the Indemnified Party for the damages to the extent of such payment.
- 8.6 Indemnification Procedures
- 8.6.1 Whenever a claim shall arise for indemnification, the relevant Indemnified Party, as appropriate, shall promptly notify the Indemnifying Party and request in writing the Indemnifying Party to defend the same. Failure to so notify the Indemnifying Party shall not relieve the Indemnifying Party of any liability that the Indemnifying Party might have, except to the extent that such failure prejudices the Indemnifying Party's ability to defend such claim.

- 8.6.2 The Indemnifying Party shall have the right to defend against such liability or assertion, in which event the Indemnifying Party shall give written notice to the Indemnified Party of acceptance of the defense of such claim and the identity of counsel selected by the Indemnifying Party.
- 8.6.3 Until such time as Indemnifying Party provides written notice of acceptance of the defense of such claim, the Indemnified Party shall defend such claim, at the expense of the Indemnifying Party, subject to any right of the Indemnifying Party to seek reimbursement for the costs of such defense in the event that it is determined that Indemnifying Party had no obligation to indemnify the Indemnified Party for such claim.
- 8.6.4 Upon accepting the defense, the Indemnifying Party shall have exclusive right to control and conduct the defense and settlement of any such Claims, subject to consultation with the Indemnified Party. So long as the Indemnifying Party is controlling and conducting the defense, the Indemnifying Party shall not be liable for any settlement by the Indemnified Party unless such Indemnifying Party has approved such settlement in advance and agrees to be bound by the agreement incorporating such settlement.
- 8.6.5 At any time, an Indemnified Party shall have the right to refuse a compromise or settlement, and, at such refusing Party's cost, to take over such defense; provided that, in such event the Indemnifying Party shall not be responsible for, nor shall it be obligated to indemnify the refusing Party against, any cost or liability in excess of such refused compromise or settlement.
- 8.6.6 With respect to any defense accepted by the Indemnifying Party, the Indemnified Party will be entitled to participate with the Indemnifying Party in such defense if the claim requests equitable relief or other relief that could affect the rights of the Indemnified Party, and shall also be entitled to employ separate counsel for such defense at such Indemnified Party's expense.
- 8.6.7 If the Indemnifying Party does not accept the defense of any indemnified claim as provided above, the Indemnified Party shall have the right to employ counsel for such defense at the expense of the Indemnifying Party.
- 8.6.8 In the event of a failure to assume the defense, the Indemnified Party may negotiate a settlement, which shall be presented to the Indemnifying Party. If the Indemnifying Party refuses to agree to the presented settlement, the Indemnifying Party may take over the defense. If the Indemnifying Party refuses to agree to the presented settlement and refuses to take over the defense, the Indemnifying Party shall be liable for any reasonable cash settlement not involving any admission of liability by the Indemnifying Party, though such settlement may have been made by the Indemnified Party without approval of the Indemnifying Party, it being the Parties' intent that no settlement involving a non-monetary concession by the Indemnifying Party, including an admission of liability by such Party, shall take effect without the written approval of the Indemnifying Party.
- 8.6.9 Each Party agrees to cooperate and to cause its employees and agents to cooperate with the other Party in the defense of any such claim and the relevant records of each Party shall be available to the other Party with respect to any such defense, subject to the restrictions and limitations set forth in Section 9.

8.7 Apportionment of Fault. Except for losses alleged or claimed by a Customer of either Party and except as otherwise provided in specific appendices, in the case of any loss alleged or claimed by a third party arising out of the negligence or willful misconduct of both Parties, each Party shall bear, and its obligation under this Section shall be limited to, that portion of the resulting expense caused by its own negligence or willful misconduct or that of its agents, servants, contractors, or others acting in aid or concert with it.

8.7.1 The Parties are not liable for any act or omission of other Providers.

8.7.2 Failure of either Party to insist on performance of any term or condition of this Agreement or to exercise any right or privilege hereunder shall not be construed as a continuing or future waiver of such term, condition, right or privilege

## 8.8 NO CONSEQUENTIAL DAMAGES

NEITHER THE TELEPHONE COMPANY NOR THE CMRS PROVIDER SHALL BE LIABLE TO THE OTHER PARTY FOR ANY INDIRECT, INCIDENTAL, CONSEQUENTIAL, RELIANCE, OR SPECIAL DAMAGES SUFFERED BY SUCH OTHER PARTY (INCLUDING, WITHOUT LIMITATION, DAMAGES FOR HARM TO BUSINESS, LOST REVENUES, LOST SAVINGS, OR LOST PROFITS SUFFERED BY SUCH OTHER PARTY), REGARDLESS OF THE FORM OF ACTION, WHETHER IN CONTRACT, WARRANTY, STRICT LIABILITY, OR TORT, INCLUDING, WITHOUT LIMITATION, NEGLIGENCE WHETHER ACTIVE OR PASSIVE, AND REGARDLESS OF WHETHER THE PARTIES KNEW OF THE POSSIBILITY THAT SUCH DAMAGES COULD RESULT. EACH PARTY HEREBY RELEASES THE OTHER PARTY (AND SUCH OTHER PARTY'S SUBSIDIARIES AND AFFILIATES AND THEIR RESPECTIVE OFFICERS, DIRECTORS, EMPLOYEES AND AGENTS) FROM ANY SUCH CLAIM. NOTHING CONTAINED IN THIS SECTION WILL LIMIT EITHER PARTIES LIABILITY TO THE OTHER FOR (i) WILLFUL OR INTENTIONAL MISCONDUCT (INCLUDING GROSS NEGLIGENCE) OR (ii) BODILY INJURY, DEATH, OR DAMAGE TO TANGIBLE REAL OR TANGIBLE PERSONAL PROPERTY TO THE EXTENT PROXIMATELY CAUSED BY THE TELEPHONE COMPANY'S OR THE CMRS PROVIDER'S NEGLIGENT ACT OR OMISSION OR THAT OF THEIR RESPECTIVE AGENTS, SUBCONTRACTORS OR EMPLOYEES, NOR WILL ANYTHING CONTAINED IN THIS SECTION LIMIT THE PARTIES' INDEMNIFICATION OBLIGATIONS, AS SPECIFIED HEREIN.

## 8.9 RELEASES

In resolution of the Parties rights, and in further consideration of this Agreement, each Party releases, acquits and discharges the other Party of and from any claim, debt, demand, liability, action or cause of action arising from or relating to the payment of money for the transport and termination of traffic prior to the Effective Date of this Agreement.

## 9.0 Confidentiality and Proprietary Information

9.1 For the purposes of this Agreement, Confidential Information ("Confidential Information") means confidential or proprietary technical or business information given by one Party (the "Discloser") to the other (the "Recipient"). All information which is disclosed by one Party to the other in connection with this Agreement, during negotiations and the term of this Agreement will not be deemed Confidential Information to the Discloser and subject to this Section 9, unless the confidentiality of the information is confirmed in writing by

the Discloser prior to disclosure. The Recipient agrees (i) to use Confidential Information only for the purpose of performing under this Agreement, (ii) to hold it in confidence and disclose it to no one other than its employees having a need to know for the purpose of performing under this Agreement, and (iii) to safeguard it from unauthorized use or disclosure using at least the same degree of care with which the Recipient safeguards its own Confidential Information. If the Recipient wishes to disclose the Discloser's Confidential Information to a third-party agent or consultant, such disclosure must be agreed to in writing by the Discloser, and the agent or consultant must have executed a written agreement of nondisclosures and nonuse comparable in scope to the terms of this section.

- 9.2 The Recipient may make copies of Confidential Information only as reasonably necessary to perform its obligations under this Agreement. All such copies will be subject to the same restrictions and protections as the original and will bear the same copyright and proprietary rights notices as are contained on the original.
- 9.3 The Recipient agrees to return all Confidential Information in tangible form received from the Discloser, including any copies made by the Recipient, within thirty (30) days after a written request is delivered to the Recipient, or to destroy all such Confidential Information if directed to do so by Discloser except for Confidential Information that the Recipient reasonably requires to perform its obligations under this Agreement; the Recipient shall certify destruction by written letter to the Discloser. If either Party loses or makes an unauthorized disclosure of the Party's Confidential Information, it will notify such other Party immediately and use its best efforts to retrieve the lost or wrongfully disclosed information.
- 9.4 The Recipient shall have no obligation to safeguard Confidential Information: (i) which was in the possession of the Recipient free of restriction prior to its receipt from the Discloser; (ii) after it becomes publicly known or available through no breach of this Agreement by the Recipient; (iii) after it is rightfully acquired by the Recipient free of restrictions on its discloser; (iv) after it is independently developed by personnel of the Recipient to whom the Discloser's Confidential Information had not been previously disclosed. In addition, either Party will have the right to disclose Confidential Information to any mediator, arbitrator, state or federal regulatory body, or a court in the conduct of any mediation, arbitration or approval of this Agreement, as long as, in the absence of an applicable protective order, the Discloser has been previously notified by the Recipient in time sufficient for the Recipient to undertake all lawful measures to avoid disclosing such confidential information and for Discloser to have reasonable time to seek or negotiate a protective order before or with any applicable mediator, arbitrator, state or regulatory body or a court.
- 9.5 The Parties recognize that an individual End User may simultaneously seek to become or be a Customer of both Parties. Nothing in this Agreement is intended to limit the ability of either Party to use customer specific information lawfully obtained from End Users or sources other than the Discloser.
- 9.6 Each Party's obligations to safeguard Confidential Information disclosed prior to expiration or termination of this Agreement will survive such expiration or termination.
- 9.7 No license is hereby granted under any patent, trademark, or copyright, nor is any such license implied solely by virtue of the disclosure of any Confidential Information.
- 9.8 Each Party agrees that the Discloser may be irreparably injured by a disclosure in breach of this Agreement by the Recipient or its representatives and the Discloser will be entitled to seek equitable relief, including injunctive relief and specific performance, in the event of any breach or threatened breach of the confidentiality provisions of this

Agreement. Such remedies will not be deemed to be the exclusive remedies for a breach of this Agreement, but will be in addition to all other remedies available at law or in equity.

#### 10.0 Finality of Disputes

No claims shall be brought for disputes arising from this Agreement more than twenty-four (24) months from the date of occurrence which gives rise to the dispute, or beyond the applicable statute of limitations, whichever is shorter.

#### 11.0 Intervening Law

11.1 The terms and conditions of this Agreement shall be subject to any and all applicable laws, rules, regulations, orders or guidelines that subsequently may be prescribed by any federal or state government authority with jurisdiction. To the extent required or permitted by any such subsequently prescribed law, rule, regulation, order or guideline, the Parties agree to negotiate in good faith toward an agreement to modify, in writing, any affected term or condition of this Agreement to bring them into compliance with such law, rule, regulation, order or guideline. Upon failure to reach agreement to implement a change in laws, rules, regulations, orders or guidelines, either Party may seek arbitration before any regulatory authority with jurisdiction.

11.2 Each Party shall comply with all federal, state, and local laws, rules and regulations applicable to its performance under this Agreement.

#### 13.0 Miscellaneous Provisions

13.1 Effective Date – The effective date of this agreement is January 1, 2003. The Parties shall implement the agreement immediately, work cooperatively, and take all steps necessary and proper to expeditiously prosecute a joint application before the Commission seeking approval of this Agreement pursuant to the provisions of 47 U.S.C. § 252. Each Party shall be responsible for its own costs and expenses incurred in obtaining approval of this Agreement from the Commission.

#### 14.2 Term and Termination

14.2.1 This Agreement shall remain in effect for three (3) years after January 1, 2003. Thereafter, the Agreement shall automatically renew for additional one (1) year terms, unless either Party gives the other Party written notice of intent to terminate at least sixty (60) days prior to the expiration date of the initial or renewed term.

14.2.2 Upon termination or expiration of this agreement in accordance with the above Section:

- (a) Each Party shall continue to comply with its obligations set forth in Section Confidentiality and
- (b) Each Party shall promptly pay all amounts (including any late payment charges) owed under this Agreement; and upon termination or expiration of this Agreement, each Party shall promptly pay all amounts (including

any late payment charges) owed under this Agreement or place disputed amounts into an escrow account.

(c) Each Party's indemnification obligations shall survive.

14.2.3 Either Party may terminate this Agreement in whole or in part in the event of a default by the other Party, provided however, that the non-defaulting Party notifies the defaulting Party in writing of the alleged default and that the defaulting Party does not cure the alleged default within thirty (30) days of receipt of written notice thereof.

- 14.3 Binding Effect - This Agreement will be binding on and inure to the benefit of the respective successors and permitted assigns of the Parties.
- 14.4 Assignment - Neither Party may assign, subcontract, or otherwise transfer its rights or obligations under this Agreement except under such terms and conditions as are mutually acceptable to the other Party and with such Party's prior written consent, which consent shall not be unreasonably withheld, delayed, or conditioned; provided, that either Party may assign its rights and delegate its benefits, and delegate its duties and obligations under this Agreement without the consent of the other Party to a parent, one hundred (100) per cent owned affiliate or subsidiary of that Party for the continued provisioning of the telecommunications service under this Agreement.
- 14.5 Third Party Beneficiaries - This Agreement shall not provide any non-party with any remedy, claim, cause of action or other right.
- 14.6 Force Majeure - Neither Party shall be responsible for delays or failures in performance resulting from acts or occurrences beyond the reasonable control of such Party, regardless of whether such delays or failures in performance were foreseen or foreseeable as of the date of this Agreement, including, without limitation: fire, explosion, power failure, acts of God, war, revolution, civil commotion, or acts of public enemies; any law, order, regulation, ordinance or requirement of any government or legal body; or labor unrest, including, without limitation strikes, slowdowns, picketing or boycotts; or delays caused by the other Party or by other service or equipment vendors; or any other circumstances beyond the Party's reasonable control. In such event, the Party affected shall, upon giving prompt notice to the other Party, be excused from such performance on a day-to-day basis to the extent of such interference (and the other Party shall likewise be excused from performance of its obligations on a day-for-day basis to the extent such Party's obligations relate to the performance so interfered with). The affected Party shall use its reasonable commercial efforts to avoid or remove the cause of non-performance and both Parties shall proceed to perform with dispatch once the causes are removed or cease.
- 14.7 DISCLAIMER OF WARRANTIES - THE PARTIES MAKE NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTY AS TO MERCHANTABILITY OR FITNESS FOR INTENDED OR PARTICULAR PURPOSE WITH RESPECT TO SERVICES OR FACILITIES PROVIDED HEREUNDER. ADDITIONALLY, NEITHER PARTY ASSUMES ANY RESPONSIBILITY WITH REGARD TO THE CORRECTNESS OF DATA OR INFORMATION SUPPLIED BY THE OTHER PARTY WHEN THIS DATA OR INFORMATION IS ACCESSED AND USED BY A THIRD PARTY.
- 14.8 Survival of Obligations - Any liabilities or obligations of a Party for acts or omissions prior to the cancellation or termination of this Agreement, any obligation of a Party under the provisions regarding indemnification, Confidential Information, limitations on liability, and any other provisions of this Agreement which, by their terms, are contemplated to survive

(or to be performed after) termination of this Agreement, will survive cancellation or termination thereof.

14.9 Waiver - The failure of either Party to enforce or insist that the other Party comply with the terms or conditions of this Agreement, or the waiver by either Party in a particular instance of any of the terms or conditions of this Agreement, shall not be construed as a general waiver or relinquishment of the terms and conditions, but this Agreement shall be and remain at all times in full force and effect.

#### 14.10 Patents, Trademarks and Trade Names

14.10.1 With respect to claims of patent infringement made by third persons, the Parties shall defend, indemnify, protect and save harmless the other from and against all claims arising out of the improper combining with or use by the indemnifying Party of any circuit, apparatus, system or method provided by that Party or its subscribers in connection with the Interconnection arrangements furnished under this Agreement.

14.10.2 No license under patents is granted by either Party to the other, or shall be implied or arise by estoppel with respect to any circuit, apparatus, system, or method used by either Party in connection with any Interconnection Arrangements or services furnished under this Agreement.

14.10.3 Nothing in this Agreement will grant, suggest, or imply any authority for one Party to use the name, trademarks, service marks, or trade names of the other for any purpose whatsoever, absent prior written consent of the other Party.

#### 14.11 Relationship of the Parties

14.11.1 This Agreement is for the sole benefit of the Parties and their permitted assigns, and nothing herein express or implied shall create or be construed to create any third-party beneficiary rights hereunder.

14.11.2 Except for provisions herein expressly authorizing a Party to act for another, nothing in this Agreement shall constitute a Party as a legal representative or agent of the other Party, nor shall a Party have the right or authority to assume, create or incur any liability or any obligation of any kind, express or implied, against or in the name or on behalf of the other Party unless otherwise expressly permitted by such other Party.

14.11.3 Except as otherwise expressly provided in this Agreement, no Party undertakes to perform any obligation of the other Party, whether regulatory or contractual, or to assume any responsibility for the management of the other Party's business.

14.11.4 Each Party is an independent contractor, and has and hereby retains the right to exercise full control of and supervision over its own performance of its obligations under this Agreement and retains full control over the employment, direction, compensation and discharge of its employees assisting in the performance of such obligations. Each Party and each Party's contractor(s) shall be solely responsible for all matters relating to payment of such employees, including the withholding or payment of all applicable federal, state and local income taxes, social security taxes and other payroll taxes with respect to its employees, as well as any taxes, contributions or other obligations imposed by applicable state

unemployment or workers' compensation acts and all other regulations governing such matters. Each Party has sole authority and responsibility to hire, fire and otherwise control its employees.

- 14.11.5 Nothing contained herein shall constitute the Parties as joint venturers, partners, employees or agents of one another, and neither Party shall have the right or power to bind or obligate the other. Nothing herein will be construed as making either Party responsible or liable for the obligations and undertakings of the other Party. Except for provisions herein expressly authorizing a Party to act for another, nothing in this Agreement shall constitute a Party as a legal representative or agent of the other Party, nor shall a Party have the right or authority to assume, create or incur any liability or any obligation of any kind, express or implied, against or in the name or on behalf of the other Party unless otherwise expressly permitted by such other Party.
- 14.12 Services - Each Party is solely responsible for the services it provides to its End Users and to other Telecommunications Carriers.
- 14.13 Notices - Any notice to a Party required or permitted under this Agreement shall be in writing and shall be deemed to have been received on the date of service if served personally; on the date receipt is acknowledged in writing by the recipient if delivered by regular mail; or on the date stated on the receipt if delivered by certified or registered mail or by a courier service that obtains a written receipt. Notice may also be provided by facsimile, which shall be effective on the next Business Day following the date of transmission as reflected in the facsimile confirmation sheet. Any notice shall be delivered using one of the alternatives mentioned in this section and shall be directed to the applicable address indicated below or such address as the Party to be notified has designated by giving notice in compliance with this section.

For Western Wireless:           Regulatory Department  
  cc Engineering Department

  Clear Lake, SD 57226  
  605-874-2181 (phone)  
  605-874-2014 (facsimile)

- 14.14 Expenses - Except as specifically set out in this Agreement, each Party will be solely responsible for its own expenses involved in all activities related to the subject of this Agreement.
- 14.15 Headings - The headings in this Agreement are inserted for convenience and identification only and will not be considered in the interpretation of this Agreement.
- 14.16 Governing Law – For all claims under this Agreement, that are based upon issues within the jurisdiction of the FCC or governed by federal law, the Parties agree that the

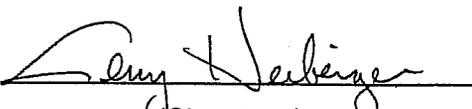

remedies for such claims shall be governed by the FCC and the Act. For all claims under this agreement that are based upon issues within the jurisdiction of the Commission or governed by state law, the Parties agree that the jurisdiction for all such claims shall be with such Commission, and the remedy for such claims shall be as provided for by such Commission. In all other respects, this Agreement shall be governed by the domestic laws of the State of South Dakota without reference to conflict of law provisions.

- 14.17 Multiple Counterparts - This Agreement may be executed in multiple counterparts, each of which will be deemed an original but all of which will together constitute but one and the same document.
- 14.18 Complete Terms - This Agreement together with its appendices and exhibits constitutes the entire agreement regarding the exchange and compensation for Local Traffic between the Parties and supersedes all prior oral or written agreements, representations, statements, negotiations, understandings, proposals and undertakings with respect to the subject matter hereof. Appendices and exhibits referred to herein are deemed attached hereto and incorporated by reference. Neither Party shall be bound by any amendment, modification or additional terms unless it is reduced to writing signed by an authorized representative of the Party sought to be bound.
- 14.19 This Agreement is the joint work product of the Parties and has been negotiated by the Parties and their respective counsel and shall be fairly interpreted in accordance with its terms and, in the event of any ambiguities, no inferences shall be drawn against either Party.
- 14.20 No provision of this Agreement shall be deemed amended or modified by either Party unless such an amendment or modification is in writing, dated, and signed by an authorized representative of both Parties.
- 14.21 Neither Party shall be bound by any preprinted terms additional to or different from those in this Agreement that may appear subsequently in the other Party's form documents, purchase orders, quotations, acknowledgments, invoices or other communications.

IN WITNESS WHEREOF, the Parties have executed this Agreement through their duly authorized representatives.

APPENDIX A

1.0 MOBILE TO LAND INTERCONNECTION RATES PER MINUTE OF USE

TYPE 2A	TYPE 1	TYPE 2B
\$.007	\$.007	\$.007

2.0 LAND TO MOBILE INTERCONNECTION RATES PER MINUTE OF USE

TYPE 2A	TYPE 1	TYPE 2B
\$.007	\$.007	\$.007

3.0 RECIPROCAL COMPENSATION FOR TRANSPORT AND TERMINATION OF TRAFFIC EXCHANGED THROUGH AN INDIRECT INTERCONNECTION

\$.007

4.0 RECIPROCAL COMPENSATION CREDIT FORMULA

The reciprocal compensation credit will be calculated assuming a ratio of land originated to mobile originated traffic as set forth below. Divide the total number of monthly measured minutes of use terminated on Telephone Company's network by the Mobile to Land Factor. The total calculation will then be multiplied by the Land to Mobile Factor to arrive at the total Telephone Company minutes of use terminated on CMRS Provider's network per month. This monthly total will be multiplied by the Land to Mobile Interconnection rate set forth in Appendix A 2.0 to obtain the Reciprocal Compensation Credit for the month. For example, Telephone Company determines that 10,000 minutes of mobile originated Telecommunications Traffic has been delivered to it by the CMRS Provider in a given billing period: In Year 1 of the Agreement, the Parties will assume that 2,658 minutes of land originated calls were delivered by Telephone Company to CMRS Provider for termination (10,000/.79 multiplied by .21).

The Reciprocal Compensation Credit Factors over the term of the agreement shall be:

	Year 1	Year 2	Year 3
Mobile to Land	79%	78%	77%
Land to Mobile	21%	22%	23%

5.0 FACILITY RATE

To the extent CMRS Provider requires facilities referenced in 3.1, such facilities will be made available and the price will be based upon the lowest Telephone Company interstate or intrastate rate published in the Telephone Company's tariff or pricing catalog.

6.0 SHARED FACILITY FACTOR

The default Shared Facility Factor over the term of the agreement shall be:

	Year 1	Year 2	Year 3
CMRS Provider	79%	78%	77%
Telephone Company	21%	22%	23%

**DIRECT PRE-FILED TESTIMONY OF**

**STEVE OLESON**

May 14, 2004

**Q: Please state your business name and address?**

A: My name is Steve Oleson of Valley Telecommunications Cooperative Association, Inc. Our address is PO Box 7, Herreid, South Dakota 57632. Our telephone number is 605-437-2615.

**Q: By whom are you employed and in what capacity?**

A: I am the General Manager of Valley Telecommunications Cooperative Association, Inc. Valley Telecommunications is a rural independent local exchange carrier that provides local exchange, exchange access and other telecommunications services to 3,576 access lines within its South Dakota service area, which include the exchanges of Herreid, Pollock, Mound City, Glenham, Eureka, Hosmer, Leola, Long Lake & Ipswich. Our Life line customers per exchange are as follows: Herreid - 19; Pollock - 11; Mound City - 8; Glenham - 3; Eureka - 38; Hosmer - 13; Leola - 14; Long Lake - 5; and Ipswich - 19.

**Q: Does your company have any direct points of interconnection with any wireless carrier and/or does your company provide any blocks of numbers for your company's rate centers to any wireless carrier?**

A: No.

**Q: How do the local calling areas of your exchanges compare with those of the wireless carriers operating in your area?**

A: Wireless service areas are much more extensive.

**Q: Does your company provide any Extended Area Service (EAS) plans to its subscribers or to a connecting carrier's subscribers?**

A: Yes.

**Q: What is the current method of routing calls from your subscriber's landline phones to wireless phone numbers?**

A: The calls must go through our toll circuits to SDN no different than any other toll call.

**Q: What is the number of wireless carriers authorized to serve in your company's service area?**

A: There are two, Verizon and Western Wireless

**Q: Have any subscribers requested local number portability (LNP) from your company?**

A: To my knowledge, we have received only one inquiry about LNP from a subscriber.

**Q: Since the passage of the 1996 Telecom Act have any wireline carriers ever requested LNP from your company?**

A: No.

**Q: Have any wireless carriers requested LNP?**

A: Yes, Western Wireless.

**Q: Are there any existing capital investments for broadband that will be diverted if your company must deploy LNP?**

A: Valley is currently working to deploy video over DSL and is researching the possibility of VoIP for future services. This may be at risk.

**Q. How much time would be required for your company to provide LNP, if ordered by the Commission?**

A We have not completed a specific implementation time line yet, but implementation will take a considerable amount of time.

**Q: In your experience as the general manager of Valley Telecommunications have you seen increases or additions to the itemized fees on your customer's telephone bills?**

A. Yes.

**Q: What do you expect your customer's reaction to be to any new LNP fees on their bills?**

A. I would expect the reaction to be very negative. The majority of Valley's subscribers are elderly and are on fixed income. Adding additional fees would be a hardship and these subscribers may have to go without all telecommunications services.

**Q: Do you expect that the costs of implementing LNP could create the necessity of a rate increase for your company?**

A. Depending on what costs are recoverable in any LNP end user fees, if the remainder is significant, Valley will not be able to absorb them and may have to implement a dial tone rate increase to recover any deployment costs.

**Q: Is the public interest, convenience, and necessity served by requiring your company to implement LNP at this time?**

A: No. The current demand for LNP appears to be very minimal because to the best of our knowledge, only one customer has inquired about LNP. Also, the cost of LNP is significant.

**Q: Does this conclude your direct testimony?**

A: Yes.

OF § 251(b)(2) OF THE COMMUNICA-  
TIONS ACT OF 1934 AS AMENDED

Docket No. TC04-050  
REBUTTAL TESTIMONY OF  
STEVE OLESON

---

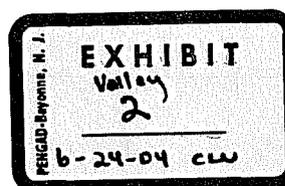

REBUTTAL TESTIMONY OF

STEVE OLESON

ON BEHALF OF

VALLEY TELECOMMUNICATIONS COOPERATIVE ASSOCIATION, INC.

June 14, 2004

1 Q. Please state your name, business name and address.

2 A. **My name is Steve Oleson. I am the General Manager of Valley Telecommunications**  
3 **Cooperative Association, Inc. ("Valley"), whose address is 102 Main Street South,**  
4 **Herreid, South Dakota 57632.**

5 Q. What is the purpose of your testimony?

6 A. **I will provide rebuttal testimony to various statements made by Ron Williams in his**  
7 **testimony filed on May 28, 2004 on behalf of WWC License L.L.C. (Western Wire-**  
8 **less).**

9 Q. At page 6, lines 8-10, Mr. Williams alleges that the Petitioners "waited 4 months to seek  
10 a suspension of their LNP obligations, hopeful that this tactic would result in delay of  
11 their legal obligations." How do you respond?

12 A. **I dispute Mr. Williams' characterization of events as baseless and inflammatory.**  
13 **Once the FCC made it clear that wireline carriers would be required to port num-**  
14 **bers to wireless carriers in areas outside the top 100 MSAs by May 24, 2004, Valley**  
15 **took immediate steps to investigate the cost and the processes involved with LNP**  
16 **and to explore its legal options. Because Valley had no experience with LNP, it took**  
17 **time to gather the pertinent information and to make the decision to seek a suspen-**  
18 **sion of the requirement from the Commission. Further, the suspension petition it-**  
19 **self took time and effort to prepare because Valley wanted to present as complete a**  
20 **petition as possible, accompanied by cost information as complete as possible.**

21 Q. Do you agree with Mr. Williams' statement at page 14, lines 19-22, in which he states  
22 that "LECs will need to route a call to a ported number to the serving tandem" and to Mr.  
23 Williams' statement at page 15, lines 1-4 when he discusses the routing of allegedly "lo-  
24 cal calls?"

1    **A. In its answer to Interrogatory 4., Western Wireless identifies the “serving tandem”**  
2    **as the Qwest LATA or local tandem, which is outside of Valley’s service territory.**  
3    **(See Western Wireless Response to Interrogatory 4., attached to the Rebuttal Tes-**  
4    **timony of Steven E. Watkins). Mr. Williams’ statement is not consistent with the in-**  
5    **terconnection agreement signed by Valley and Western Wireless. Pursuant to that**  
6    **agreement, Valley did not agree to route traffic destined for Western Wireless to the**  
7    **serving tandem. Rather, traffic terminating to Western Wireless is routed to an in-**  
8    **terexchange carrier. Therefore, it appears that Western Wireless’ argument really**  
9    **is a bad faith attempt to change the agreement between the parties.**

10   **Q. At page 19, lines 8-10, Mr. Williams states that it is his belief that “the FCC views that it**  
11   **is the originating carrier’s responsibility to deliver local traffic for termination and that**  
12   **the costs associated with fulfilling that responsibility are not a number portability cost.”**  
13    **What is your response to this statement?**

14   **A. Mr. Williams’ statements are inconsistent and should be rejected. First he argues**  
15   **that Valley should be required to install new facilities to deliver ported calls to**  
16   **Western Wireless and then he argues that the cost of those facilities are not number**  
17   **portability costs. Further, as discussed at lines 1-9 above, Mr. Williams’ suggestion**  
18   **that it is Valley’s responsibility to deliver traffic destined to Western Wireless**  
19   **through a serving tandem is not consistent with the interconnection agreement be-**  
20   **tween Valley and Western Wireless.**

21   **Q. At page 20, lines 13-16, Mr. Williams states that “[t]he routing methods proposed by the**  
22   **Petitioners are inefficient in that they make little or no utilization of existing equipment**  
23   **and shared facilities currently used to exchange calls with other carriers.” How do you**  
24    **respond?**

1 A. The routing methods reflected in the cost exhibit attached to Valley's Petition are  
2 based on the current routing arrangements that Valley has in place with other car-  
3 riers, namely, calls that are dialed on a local 7-digit basis are routed via direct con-  
4 nections. Therefore, if calls to numbers ported to a carrier are to be dialed on a lo-  
5 cal 7-digit basis, a direct connection needs to be established between the carriers.

6 Q. Would Western Wireless' routing proposal have impacts to Valley beyond LNP?

7 A. Yes. It is my understanding that Western Wireless' proposal would increase Val-  
8 ley's costs. First, Western Wireless' proposal would require Valley to pay for new  
9 facilities to the tandem provider that it does not need for any purpose other than to  
10 route calls to ported numbers to wireless carriers. Second, Valley would most likely  
11 have to pay transit traffic charges to the tandem provider for transporting the traf-  
12 fic to the wireless carriers. Third, in response to Interrogatory 16.b., Western Wire-  
13 less indicates that Valley would be required to pay reciprocal compensation on calls  
14 to ported numbers, even if Valley does not pay compensation on such calls today.  
15 (See Western Wireless Response to Interrogatory 16.b. attached to the Rebuttal Tes-  
16 timony of Steven E. Watkins.)

17 Q. Is there any other impact?

18 A. Yes. It appears that Western Wireless' proposal would create a regulatory arbi-  
19 trage scenario that could lead to the loss of access revenues. Today, certain calls to  
20 wireless carriers are routed to interexchange carriers. For example, if Valley Cus-  
21 tomer A calls Western Wireless Customer B, Valley Customer A incurs a toll  
22 charge. However, under Western Wireless' proposal, it is my understanding that if  
23 Valley Customer A calls Western Wireless Customer B, who now has a number  
24 ported from Valley, Valley Customer A would be charged for a local call. Custom-  
25 ers may be encouraged to "give up" their existing wireless numbers and obtain

1            **wireline numbers for the sole purpose of porting that number to avoid toll charges.**  
2            **This is not only a bad public policy result, but also simply a bad faith attempt to**  
3            **avoid an important contract provision upon which Western Wireless has already**  
4            **agreed with our company.**

5    Q.    Does this conclude your rebuttal testimony?

6    A.    Yes.

CERTIFICATE OF SERVICE

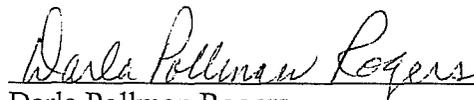

The undersigned hereby certifies that she served a copy of the foregoing **REBUTTAL TESTIMONY** upon the persons herein next designated, on the date below shown, by depositing a copy thereof in the United States mail at Pierre, South Dakota, postage prepaid, in an envelope addressed to each said addressee, to-wit:

**DIRECT PRE-FILED TESTIMONY OF  
TOM BULLOCK ON BEHALF OF VALLEY TELECOMMUNICATIONS  
COOPERATIVE REGARDING COMPANY-SPECIFIC COST DATA**

May 14, 2004

1  
2 **DIRECT TESTIMONY OF TOM BULLOCK**  
3 **REGARDING COMPANY-SPECIFIC COST DATA**  
4

5 **Q1. Please State your name, Employer, Business Address and Telephone Num-**  
6 **ber.**

7  
8 A. My name is Tom Bullock. I am employed with TELEC Consulting Resources  
9 Inc. My business address is 233 South 13<sup>th</sup> Street, Suite 1225, Lincoln Nebraska,  
10 68508. My telephone number is (402) 441-4315.

11 **Q2. On whose behalf are you testifying?**

12  
13 A. I am testifying on behalf of the Company identified in the caption of the docket  
14 set out above. I will refer to this Company as the "RLEC".

15 **Q3. Have you provided your background information and an explanation of your**  
16 **role in this Docket in the "companion" testimony that has been offered in this**  
17 **Docket?**

18 A. Yes, I have.

19 **Q4. Did you prepare Exhibit 1 to the Petition of the RLEC filed in this Docket?**

20 A. Yes, in conjunction with members of the professional staff of TELEC, I was re-  
21 sponsible for the preparation of Exhibit 1 as was attached to the Petition and I was  
22 also responsible for the preparation of supporting information prepared in connec-  
23 tion with the responses to the discovery requests of Western Wireless. I was also  
24 responsible for the preparation of Exhibit 2 that is attached to this testimony.

25 **Q5. In your "introductory" testimony you have explained the line items that**  
26 **comprise Exhibit 2 and the process used to compile the data that was used to**  
27 **develop the cost as shown on Exhibit 2. Please discuss where in your "intro-**  
28 **ductory" testimony you describe this process.**

1 A. The process that was used to compile and develop the cost per line in Exhibit 2 is  
2 described on pages six through twenty-one in my “introductory” testimony.

3 **Q6. What was the source of the data?**

4 A. The data was derived from the books, financial records and managers of the  
5 RLEC. Data was also obtained from switch vendors, engineering consultants, tar-  
6 iffs, service order administration service bureaus, the number portability admini-  
7 stration center, a number portability database provider, and my professional ex-  
8 perience.

9 **Q7. What was the purpose of obtaining that particular data?**

10 A. To assist me in preparing an estimate of the costs to implement LNP for the  
11 RLEC.

12 **Q8. Is this the type of data that experts in your field would ordinarily review in  
13 formulating an opinion concerning the costs of LNP?**

14 A. Yes.

15 **Q9. What use did you make of the data after you received it from the RLEC?**

16 A. I have explained the use of the data on pages eleven through twenty-one of my  
17 “introductory” testimony.

18 **Q10. Have you reached an opinion with a reasonable degree of professional cer-  
19 tainty as to the total non-recurring costs, excluding transport, to implement  
20 LNP that you have calculated for the RLEC that will be recovered over a 5-  
21 year recovery period through an end user surcharge?**

22 A. Yes. My opinion is that the total non-recurring costs, excluding transport, is  
23 \$64,535. Such costs were amortized over a recovery period of 60 months using a

1 rate of return of 11.25%. The total nonrecurring costs per month, excluding trans-  
2 port, amortized over five years is \$1,411.

3 **Q11. Have you reached an opinion with a reasonable degree of professional cer-**  
4 **tainty as to the total recurring costs, excluding transport, to implement LNP**  
5 **that you have calculated for the RLEC and that will be recovered from end**  
6 **users on an ongoing monthly charge basis?**

7 A. Yes. The amount is shown on Exhibit 2, and is calculated to be \$797 per month.

8 **Q12. Have you reached an opinion with a reasonable degree of professional cer-**  
9 **tainty as to the total cost, excluding transport, per line per month that would**  
10 **be charged to end-users if LNP were to be implemented by the RLEC?**

11 A. Yes, The amount is shown on Exhibit 2. This amount was calculated by adding  
12 the total nonrecurring costs per month amortized over five years to the total recur-  
13 ring costs per month, both amounts excluding transport costs, and dividing this  
14 sum by the RLEC's total access lines. Surcharges and taxes were then applied to  
15 this quotient. The resulting cost per line per month was calculated to be \$0.71.

16 **Q13. Have you reached an opinion with a reasonable degree of professional cer-**  
17 **tainty as to the total LNP costs and the monthly amount recovered from each**  
18 **end-user if the FCC determines that transport costs should be included in the**  
19 **LNP costs recovered from end-users?**

20 A. Yes, These amounts are shown on Exhibit 2. The total nonrecurring and recurring  
21 costs, including transport costs, were calculated to be \$8,664 per month. The re-  
22 sulting LNP cost per line, per month, including transport, surcharges and taxes,  
23 was calculated to be \$2.80.

1 **Q14. If FCC determines that transport costs should not be included in the end-**  
2 **user surcharge, will the transport cost still be incurred and who will pay**  
3 **these costs?**

4 A. Transport costs will have to be incurred to transport calls outside of the RLEC's  
5 service area. If the cost is not recovered through an end-user surcharge, and if  
6 these costs are not recovered from the wireless carrier, then the only party to pay  
7 these costs would be the RLEC.

8 **Q15. Is it your opinion that the calculations that you have just described fairly and**  
9 **reasonably describe the non-recurring and recurring costs for the RLEC to**  
10 **implement LNP and the end user charges to recover such costs?**

11 A. Yes.

12 **Q16. Does this conclude your testimony?**

13 A. Yes, it does.

14

BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA

---

IN THE MATTER OF THE PETITION  
OF CITY OF FAITH TELEPHONE  
COMPANY FOR SUSPENSION OR  
MODIFICATION OF § 251(b)(2) OF THE  
COMMUNICATIONS ACT OF 1934 AS  
AMENDED

Docket No. TC04-051

---

**DIRECT PRE-FILED TESTIMONY OF  
SHANE AYRES**

May 14, 2004

1 **Q: Please state your business name and address?**

2 A: My name is Shane Ayres of City of Faith d/b/a Faith Municipal Telephone  
3 Company, P.O Box 368, Faith, SD 57626. (Business Number: 605-967-2261)

4 **Q: By whom are you employed and in what capacity?**

5 A: I am the Finance Officer of the City of Faith d/b/a Faith Municipal Telephone  
6 Company (Faith). Faith is a rural independent local exchange carrier that provides  
7 local exchange, exchange access and other telecommunications services to 400  
8 access lines within its South Dakota service area, Faith exchange only. We service  
9 8 lifeline customers.

10 **Q: Does your company have any direct points of interconnection with any wireless  
11 carrier and/or does your company provide any blocks of numbers for your  
12 company's rate centers to any wireless carrier?**

13 A: No.

14 **Q: How do the local calling areas of your exchanges compare with those of the  
15 wireless carriers operating in your area?**

16 A: Wireless service areas are much more extensive.

17 **Q: What is the current method of routing calls from your subscriber's landline  
18 phones to wireless phone numbers?**

19 A: Faith has points of interconnection (POI) with SDN and Quest. The SDN  
20 connection is for toll completion and toll termination for InterLATA and Intra  
21 LATA traffic. The Qwest POI is a terminating trunk, only for Qwest IntraLATA  
22 traffic.

1 **Q: Have any subscribers requested local number portability (LNP) from your**  
2 **company?**

3 A: To the best of my knowledge, no subscribers have requested LNP.

4 **Q: Since the passage of the 1996 Telecom Act have any wireline carriers ever**  
5 **requested LNP from your company?**

6 A: No.

7 **Q: Have any wireless carriers requested LNP?**

8 A: Yes.

9 **Q. How much time would be required for your company to provide LNP, if**  
10 **ordered by the Commission?**

11 A: We have not completed a specific implementation time line yet, but implementation  
12 will take a considerable amount of time.

13 **Q: In your experience as the Finance Officer of the City of Faith, have you seen**  
14 **increases or additions to the itemized fees on your customer's telephone bills?**

15 A: Yes.

16 **Q: What do you expect your customer's reaction to be to any new LNP fees on**  
17 **their bills?**

18 A: I would expect the reaction to be very negative.

19 **Q: Is the public interest, convenience, and necessity served by requiring your**  
20 **company to implement LNP at this time?**

21 A: No. The current demand for LNP appears to be non-existent, as no customers have  
22 requested LNP and the cost of LNP is significant.

23 **Q: Does this conclude your direct testimony?**

1 A: Yes

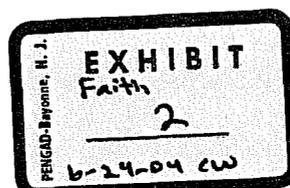

BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA

IN THE MATTER OF THE PETITION  
OF CITY OF FAITH TELEPHONE  
COMPANY FOR SUSPENSION OR  
MODIFICATION OF § 251(b)(2) OF THE  
COMMUNICATIONS ACT OF 1934 AS  
AMENDED

Docket No. TC04-051  
REBUTTAL TESTIMONY OF  
SHANE AYRES

REBUTTAL TESTIMONY OF  
SHANE AYRES  
ON BEHALF OF  
CITY OF FAITH TELEPHONE COMPANY

June 15, 2004

1 Q. Please state your name, business name and address.

2 A. **My name is Shane Ayres. I am the General Manager of City of Faith Telephone**  
3 **Company ("Faith"), whose address is 206 Main Street, Faith, South Dakota 57626.**

4 Q. What is the purpose of your testimony?

5 A. **I will provide rebuttal testimony to various statements made by Ron Williams in his**  
6 **testimony filed on May 28, 2004 on behalf of WWC License L.L.C. (Western Wire-**  
7 **less).**

8 Q. At page 6, lines 8-10, Mr. Williams alleges that the Petitioners "waited 4 months to seek  
9 a suspension of their LNP obligations, hopeful that this tactic would result in delay of  
10 their legal obligations." How do you respond?

11 A. **I dispute Mr. Williams' characterization of events as baseless and inflammatory.**  
12 **Once the FCC made it clear that wireline carriers would be required to port num-**  
13 **bers to wireless carriers in areas outside the top 100 MSAs by May 24, 2004, Faith**  
14 **took immediate steps to investigate the cost and the processes involved with LNP**  
15 **and to explore its legal options. Because Faith had no experience with LNP, it took**  
16 **time to gather the pertinent information and to make the decision to seek a suspen-**  
17 **sion of the requirement from the Commission. Further, the suspension petition it-**  
18 **self took time and effort to prepare because Faith wanted to present as complete a**  
19 **petition as possible, accompanied by cost information as complete as possible.**

20 Q. Do you agree with Mr. Williams' statement at page 14, lines 19-22, in which he states  
21 that "LECs will need to route a call to a ported number to the serving tandem" and to Mr.  
22 Williams' statement at page 15, lines 1-4 when he discusses the routing of allegedly "lo-  
23 cal calls?"

24 A. **I believe that Mr. Williams' statement is not consistent with the interconnection**  
25 **agreement signed by Faith and Western Wireless. Pursuant to that agreement,**

1           **Faith did not agree to route traffic destined for Western Wireless to the serving tan-**  
2           **dem. Rather, traffic terminating to Western Wireless is routed to an interexchange**  
3           **carrier. Therefore, it appears that Western Wireless' argument really is a bad faith**  
4           **attempt to change the agreement between the parties.**

5    Q.    At page 19, lines 8-10, Mr. Williams states that it is his belief that "the FCC views that it  
6           is the originating carrier's responsibility to deliver local traffic for termination and that  
7           the costs associated with fulfilling that responsibility are not a number portability cost."  
8           What is your response to this statement?

9    A.    **Mr. Williams' statements are inconsistent and should be rejected. First he argues**  
10           **that Faith should be required to install new facilities to deliver ported calls to West-**  
11           **ern Wireless and then he argues that the cost of those facilities are not number**  
12           **portability costs. Further, as discussed at lines 24-25, page 1, and lines 1-4 above,**  
13           **Mr. Williams' suggestion that it is Faith's responsibility to deliver traffic destined to**  
14           **Western Wireless through a serving tandem is not consistent with the interconnec-**  
15           **tion agreement between Faith and Western Wireless.**

16   Q.    At page 20, lines 13-16, Mr. Williams states that "[t]he routing methods proposed by the  
17           Petitioners are inefficient in that they make little or no utilization of existing equipment  
18           and shared facilities currently used to exchange calls with other carriers." How do you  
19           respond?

20   A.    **The routing methods reflected in the cost exhibit attached to Faith's Petition are**  
21           **based on the current routing arrangements that Faith has in place with other carri-**  
22           **ers, namely, calls that are dialed on a local 7-digit basis are routed via direct connec-**  
23           **tions. Therefore, if calls to numbers ported to a carrier are to be dialed on a local 7-**  
24           **digit basis, a direct connection needs to be established between the carriers.**

25   Q.    Would Western Wireless' routing proposal have impacts to Faith beyond LNP?

1 A. Yes. It is my understanding that Western Wireless' proposal would increase Faith's  
2 costs. First, Western Wireless' proposal would require Faith to pay for new facili-  
3 ties to the tandem provider that it does not need for any purpose other than to route  
4 calls to ported numbers to wireless carriers. Second, Faith would most likely have  
5 to pay transit traffic charges to the tandem provider for transporting the traffic to  
6 the wireless carriers.

7 Q. Is there any other impact?

8 A. Yes. It appears that Western Wireless' proposal would create a regulatory arbi-  
9 trage scenario that could lead to the loss of access revenues. Today, certain calls to  
10 wireless carriers are routed to interexchange carriers. For example, if Faith Cus-  
11 tomer A calls a Western Wireless Customer B, Faith Customer A incurs a toll  
12 charge. However, under Western Wireless' proposal, it is my understanding that if  
13 Faith Customer A calls Customer B who now has a number ported from Faith,  
14 Faith Customer A would be charged for a local call. Customers may be encouraged  
15 to "give up" their existing wireless numbers and obtain wireline numbers for the  
16 sole purpose of porting that number to avoid toll charges. This is not only a bad  
17 public policy result, but also simply a bad faith attempt to avoid an important con-  
18 tract provision upon which Western Wireless has already agreed with our company.

19 Q. Does this conclude your rebuttal testimony?

20 A. Yes.

CERTIFICATE OF SERVICE

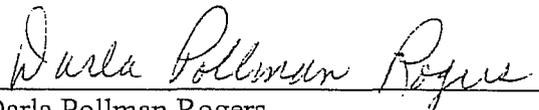

The undersigned hereby certifies that she served a copy of the foregoing **REBUTTAL TESTIMONY** upon the persons herein next designated, on the date below shown, by depositing a copy thereof in the United States mail at Pierre, South Dakota, postage prepaid, in an envelope addressed to each said addressee, to-wit:

**DIRECT TESTIMONY OF TOM BULLOCK  
ON BEHALF OF FAITH MUNICIPAL TELEPHONE COMPANY  
REGARDING COMPANY-SPECIFIC COST DATA**

May 14, 2004

**DIRECT TESTIMONY OF TOM BULLOCK  
ON BEHALF OF FAITH MUNICIPAL TELEPHONE COMPANY  
REGARDING COMPANY-SPECIFIC COST DATA**

**Q1. Please State your name, Employer, Business Address and Telephone Number.**

A. My name is Tom Bullock. I am employed with TELEC Consulting Resources Inc. My business address is 233 South 13<sup>th</sup> Street, Suite 1225, Lincoln Nebraska, 68508. My telephone number is (402) 441-4315.

**Q2. On whose behalf are you testifying?**

A. I am testifying on behalf of the Company identified in the caption of the docket set out above. I will refer to this Company as the "RLEC".

**Q3. Have you provided your background information and an explanation of your role in this Docket in the "companion" testimony that has been offered in this Docket?**

A. Yes, I have.

**Q4. Did you prepare Exhibit 1 to the Petition of the RLEC filed in this Docket?**

A. Yes, in conjunction with members of the professional staff of TELEC, I was responsible for the preparation of Exhibit 1 as was attached to the Petition and I was also responsible for the preparation of supporting information prepared in connection with the responses to the discovery requests of Western Wireless. I was also responsible for the preparation of Exhibit 2 that is attached to this testimony.

**Q5. In your "introductory" testimony you have explained the line items that comprise Exhibit 2 and the process used to compile the data that was used to develop the cost as shown on Exhibit 2. Please discuss where in your "introductory" testimony you describe this process.**

A. The process that was used to compile and develop the cost per line in Exhibit 2 is described on pages six through twenty-one in my “introductory” testimony.

**Q6. What was the source of the data?**

A. The data was derived from the books, financial records and managers of the RLEC. Data was also obtained from switch vendors, engineering consultants, tariffs, service order administration service bureaus, the number portability administration center, a number portability database provider, and my professional experience.

**Q7. What was the purpose of obtaining that particular data?**

A. To assist me in preparing an estimate of the costs to implement LNP for the RLEC.

**Q8. Is this the type of data that experts in your field would ordinarily review in formulating an opinion concerning the costs of LNP?**

A. Yes.

**Q9. What use did you make of the data after you received it from the RLEC?**

A. I have explained the use of the data on pages eleven through twenty-one of my “introductory” testimony.

**Q10. Have you reached an opinion with a reasonable degree of professional certainty as to the total non-recurring costs, excluding transport, to implement LNP that you have calculated for the RLEC that will be recovered over a 5-year recovery period through an end user surcharge?**

A. Yes. My opinion is that the total non-recurring costs, excluding transport, is \$42,564. Such costs were amortized over a recovery period of 60 months using a

rate of return of 11.25%. The total nonrecurring costs per month, excluding transport, amortized over five years is \$931.

**Q11. Have you reached an opinion with a reasonable degree of professional certainty as to the total recurring costs, excluding transport, to implement LNP that you have calculated for the RLEC and that will be recovered from end users on an ongoing monthly charge basis?**

A. Yes. The amount is shown on Exhibit 2, and is calculated to be \$285 per month.

**Q12. Have you reached an opinion with a reasonable degree of professional certainty as to the total cost, excluding transport, per line per month that would be charged to end-users if LNP were to be implemented by the RLEC?**

A. Yes, The amount is shown on Exhibit 2. This amount was calculated by adding the total nonrecurring costs per month amortized over five years to the total recurring costs per month, both amounts excluding transport costs, and dividing this sum by the RLEC's total access lines. The resulting cost per line per month was calculated to be \$3.57.

**Q13. Have you reached an opinion with a reasonable degree of professional certainty as to the total LNP costs and the monthly amount recovered from each end-user if the FCC determines that transport costs should be included in the LNP costs recovered from end-users?**

A. Yes, These amounts are shown on Exhibit 2. The total nonrecurring and recurring costs, including transport costs, were calculated to be \$5,299 per month. The resulting LNP cost per line, per month, including transport, was calculated to be \$15.54.

**Q14. If FCC determines that transport costs should not be included in the end-user surcharge, will the transport cost still be incurred and who will pay these costs?**

A. Transport costs will have to be incurred to transport calls outside of the RLEC's service area. If the cost is not recovered through an end-user surcharge, and if these costs are not recovered from the wireless carrier, then the only party to pay these costs would be the RLEC.

**Q15. Is it your opinion that the calculations that you have just described fairly and reasonably describe the non-recurring and recurring costs for the RLEC to implement LNP and the end user charges to recover such costs?**

A. Yes.

**Q16. Does this conclude your testimony?**

A. Yes, it does.

Kadoka Telephone Company, a subsidiary company of Golden West, is a rural independent local exchange carrier that provides local exchange, exchange access and other telecommunications service to 514 access lines, including 51 lifeline customers, within its South Dakota service area, which includes the exchange of Kadoka.

1           **Q: Does your company have any direct points of interconnection with any**  
2           **wireless carrier and/or does your company provide any blocks of numbers for**  
3           **your company's rate centers to any wireless carrier?**

4    A:    Yes.

5           **Q. How do the local calling areas of your exchanges compare with those of the**  
6           **wireless carriers operating in your area?**

7    A:    Wireless service areas are much more extensive.

8           **Q: Does your company provide any Extended Area Service (EAS) plans to its**  
9           **subscribers or to a connecting carrier's subscribers?**

10   A:    Yes.

11          **Q: What is the current method of routing calls from your subscriber's landline**  
12          **phones to wireless phone numbers?**

13   A:    If the wireless carrier has a direct connection in the rate center and the originating  
14          customer's calls are dialed as a local number (i.e. 685-XXXX), the calls are routed  
15          via EAS trunks to the wireless carrier. If the wireless carrier has no direct  
16          connection in the rate center and the originating customer's calls are dialed as a  
17          long distance number (i.e. 1+605+XXX-XXXX) the calls are routed to the  
18          customers presubscribed Interexchange carrier.

19

20          **Q: What is the number of wireless carriers serving in your company's service**  
21          **area?**

22          A:    ESTIMATE (Information obtained from Wireless Advisor.com):

23

24                  1. AIR TOUCH COMMUNICATIONS, INC.

25                  2. ALLTEL

26                  3. AT&T WIRELESS

- 24 27. VERIZON WIRELESS
- 25 28. VMN CONSORTIUM
- 26 29. WIRELESS II
- 27 30. NE COLORADO CELLULAR, INC./VIAERO WIRELESS

28  
29 **Q: Have any subscribers requested local number portability (LNP) from your**  
30 **company?**

31 A: To the best of my knowledge, no subscribers have requested LNP.  
32

33 **Q: Since the passage of the 1996 Telecom Act have any wireline carriers ever**  
34 **requested LNP from your company?**

35 A: To the best of my knowledge, no wireline carriers have requested LNP.  
36

37 **Q: Have any wireless carriers requested LNP and if so when?**

38 A: NE Colorado Cellular, Inc./Viaero Wireless-November 26, 2003  
39 VERIZON WIRELESS-November 14, 2003  
40 WESTERN WIRELESS-November 18, 2003  
41

1 **Q: How much time would be required for your company to provide LNP, if**  
2 **ordered by the Commission?**

3 A: We have not completed a specific implementation time line yet, but implementation  
4 will take a considerable amount of time.

5 **Q: In your experience as the general manager of Golden West, Vivian and Kadoka,**  
6 **have you seen increase or additions to the itemized fees on your customer's**  
7 **telephone bills?**

8 A: Yes.

9 **Q: What do you expect your customer's reaction to be to any new LNP fees on**  
10 **their bills?**

11 A: I would expect the reaction would be negative.

12 **Q: Is the public interest, convenience, and necessity served by requiring your**  
13 **company to implement LNP at this time?**

14 A: No. The current demand for LNP appears to be non-existent, as no customers have  
15 requested LNP and the cost of LNP is significant.

16 **Q: Does this conclude your direct testimony?**

17 A: YES

18

BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA

IN THE MATTER OF THE PETITION  
OF GOLDEN WEST TELECOMMUNI-  
CATIONS COOPERATIVE, INC.,  
VIVIAN TELEPHONE COMPANY, AND  
KADOKA TELEPHONE COMPANY  
FOR SUSPENSION OR MODIFICATION  
OF § 251(b)(2) OF THE COMMUNICA-  
TIONS ACT OF 1934 AS AMENDED

Docket No. TC04-045  
REBUTTAL TESTIMONY OF  
GEORGE STRANDELL

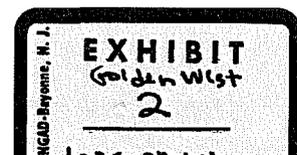

REBUTTAL TESTIMONY OF

GEORGE STRANDELL

ON BEHALF OF

GOLDEN WEST TELECOMMUNICATIONS COOPERATIVE, INC.,  
VIVIAN TELEPHONE COMPANY,  
AND KADOKA TELEPHONE COMPANY

June 14, 2004

1 Q. Please state your name, business name and address.

2 A. My name is George Strandell. I am the General Manager of Golden West Tele-  
3 communications Cooperative, Inc., Vivian Telephone Company, and Kadoka Tele-  
4 phone Company (collectively "Golden West"), of 415 Crown Street, Wall, South  
5 Dakota 57790.

6 Q. What is the purpose of your testimony?

7 A. I will provide rebuttal testimony to various statements made by Ron Williams in his  
8 testimony filed on May 28, 2004, on behalf of WWC License L.L.C. (Western Wire-  
9 less).

10 Q. At page 6, lines 8-10, Mr. Williams alleges that the Petitioners "waited 4 months to seek  
11 a suspension of their LNP obligations, hopeful that this tactic would result in delay of  
12 their legal obligations." How do you respond?

13 A. I dispute Mr. Williams' characterization of events as baseless and inflammatory.  
14 Once the FCC made it clear that wireline carriers would be required to port num-  
15 bers to wireless carriers in areas outside the top 100 MSAs by May 24, 2004, Golden  
16 West took immediate steps to investigate the cost and the processes involved with  
17 LNP and to explore its legal options. Because Golden West had no experience with  
18 LNP, it took time to gather the pertinent information and to make the decision to  
19 seek a suspension of the requirement from the Commission. Further, the suspension  
20 petition itself took time and effort to prepare because Golden West wanted to pre-  
21 sent as complete a petition as possible, accompanied by cost information as complete  
22 as possible.

1 Q. Do you agree with Mr. Williams' statement at page 14, lines 19-22, in which he states  
2 that "LECs will need to route a call to a ported number to the serving tandem" and to Mr.  
3 Williams' statement at page 15, lines 1-4 when he discusses the routing of allegedly "lo-  
4 cal calls?"

5 A. In its answer to Interrogatory 4., Western Wireless identifies the "serving tandem"  
6 as the Qwest LATA or local tandem, which is outside of Golden West's service terri-  
7 tory. (See Western Wireless Response to Interrogatory 4., attached to the Rebuttal  
8 Testimony of Steven E. Watkins). Therefore, Mr. Williams' statement is not consis-  
9 tent with Golden West's current call routing practices, because it would require  
10 Golden West to route calls to a point outside of its service territory as local. Fur-  
11 ther, Western Wireless admits that its interconnection agreement with Golden West  
12 does not require Golden West to route calls to the Qwest tandem. Rather, calls that  
13 terminate outside Golden West's service territory, including calls to Western Wire-  
14 less within the Golden West exchanges where Western Wireless does not have a di-  
15 rect connection, are routed to interexchange carriers for termination. Only traffic  
16 routed to Western Wireless via direct connections (which exist in three Golden West  
17 exchanges) is routed as "local traffic." Therefore, it appears that Western Wireless'  
18 argument really is a bad faith attempt to change the agreement between the parties.

19 Q. At page 19, lines 8-10, Mr. Williams states that it is his belief that "the FCC views that it  
20 is the originating carrier's responsibility to deliver local traffic for termination and that  
21 the costs associated with fulfilling that responsibility are not a number portability cost."  
22 What is your response to this statement?

1 A. **Mr. Williams' statements are inconsistent and should be rejected. First he argues**  
2 **that Golden West should be required to install new facilities to deliver ported calls**  
3 **to Western Wireless and then he argues that the cost of those facilities are not num-**  
4 **ber portability costs. Further, as discussed at lines 5-18, page 2, Mr. Williams' sug-**  
5 **gestion that it is Golden West's responsibility to deliver traffic destined to Western**  
6 **Wireless through a serving tandem is not consistent with the interconnection**  
7 **agreement between Golden West and Western Wireless nor, as admitted by West-**  
8 **ern Wireless, is there any requirement for Golden West to route traffic in this man-**  
9 **ner.**

10 Q. At page 20, lines 13-16, Mr. Williams states that "[t]he routing methods proposed by the  
11 Petitioners are inefficient in that they make little or no utilization of existing equipment  
12 and shared facilities currently used to exchange calls with other carriers." How do you  
13 respond?

14 A. **The routing methods reflected in the cost exhibit attached to Golden West's Petition**  
15 **are based on the current routing arrangements that Golden West has in place with**  
16 **other carriers, namely, calls that are dialed on a local 7-digit basis are routed via di-**  
17 **rect connections. For example, there is a direct connection between Golden West**  
18 **and Western Wireless in the Martin exchange, and therefore, customers in that ex-**  
19 **change can call a Western Wireless customer on a local 7-digit basis. Therefore, if**  
20 **calls to numbers ported to a carrier are to be dialed on a local 7-digit basis, a direct**  
21 **connection needs to be established between the carriers.**

22 Q. Would Western Wireless' routing proposal have impacts to Golden West beyond LNP?

1 A. Yes. It is my understanding that Western Wireless' proposal would increase  
2 Golden West's costs. First, Western Wireless' proposal would require Golden West  
3 to pay for new facilities to the tandem provider that it does not need for any purpose  
4 other than to route calls to ported numbers to wireless carriers. Second, Golden  
5 West would most likely have to pay transit traffic charges to the tandem provider  
6 for transporting the traffic to the wireless carriers. Third, in response to Interroga-  
7 tory 16.b., Western Wireless indicates that Golden West would be required to pay  
8 reciprocal compensation on calls to ported numbers, even if Golden West does not  
9 pay compensation on such calls today. (See Western Wireless Response to Inter-  
10 rogatory 16.b. attached to the Rebuttal Testimony of Steven E. Watkins.)

11 Q. Is there any other impact?

12 A. Yes. It appears that Western Wireless' proposal would create a regulatory arbi-  
13 trage scenario that could lead to the loss of access revenues. Today, certain calls to  
14 wireless carriers are routed to interexchange carriers. For example, if Golden West  
15 Customer A calls Western Wireless Customer B in an exchange where there is no  
16 direct connection and no EAS arrangement, Golden West Customer A incurs a toll  
17 charge. However, under Western Wireless' proposal, it is my understanding that if  
18 Golden West Customer A calls Western Wireless Customer B, who now has a num-  
19 ber ported from Golden West, Golden West Customer A would be charged for a lo-  
20 cal call. Customers may be encouraged to "give up" their existing wireless numbers  
21 and obtain wireline numbers for the sole purpose of porting that number to avoid  
22 toll charges. This is not only a bad public policy result, but also simply a bad faith

1 attempt to avoid an important contract provision upon which Western Wireless has  
2 already agreed with our company.

3 Q. Does this conclude your rebuttal testimony?

4 A. Yes.

**CERTIFICATE OF SERVICE**

The undersigned hereby certifies that she served a copy of the foregoing **REBUTTAL TESTIMONY** upon the persons herein next designated, on the date below shown, by depositing a copy thereof in the United States mail at Pierre, South Dakota, postage prepaid, in an envelope addressed to each said addressee, to-wit:

**DIRECT TESTIMONY OF TOM BULLOCK ON BEHALF OF  
GOLDEN WEST TELECOMMUNICATIONS COOPERATIVE, INC.,  
VIVIAN TELEPHONE COMPANY AND KADOKA TELEPHONE COMPANY  
REGARDING COMPANY-SPECIFIC COST DATA**

May 14, 2004

**DIRECT TESTIMONY OF TOM BULLOCK ON BEHALF OF  
GOLDEN WEST TELECOMMUNICATIONS COOPERATIVE, INC.,  
VIVIAN TELEPHONE COMPANY AND KADOKA TELEPHONE COMPANY  
REGARDING COMPANY-SPECIFIC COST DATA**

**Q1. Please State your name, Employer, Business Address and Telephone Number.**

A. My name is Tom Bullock. I am employed with TELEC Consulting Resources Inc. My business address is 233 South 13<sup>th</sup> Street, Suite 1225, Lincoln Nebraska, 68508. My telephone number is (402) 441-4315.

**Q2. On whose behalf are you testifying?**

A. I am testifying on behalf of the Company identified in the caption of the docket set out above. I will refer to this Company as the "RLEC".

**Q3. Have you provided your background information and an explanation of your role in this Docket in the "companion" testimony that has been offered in this Docket?**

A. Yes, I have.

**Q4. Did you prepare Exhibit 1 to the Petition of the RLEC filed in this Docket?**

A. Yes, in conjunction with members of the professional staff of TELEC, I was responsible for the preparation of Exhibit 1 as was attached to the Petition and I was also responsible for the preparation of supporting information prepared in connection with the responses to the discovery requests of Western Wireless. I was also responsible for the preparation of Exhibit 2 that is attached to this testimony.

**Q5. In your "introductory" testimony you have explained the line items that comprise Exhibit 2 and the process used to compile the data that was used to**

**develop the cost as shown on Exhibit 2. Please discuss where in your “introductory” testimony you describe this process.**

A. The process that was used to compile and develop the cost per line in Exhibit 2 is described on pages six through twenty-one in my “introductory” testimony.

**Q6. What was the source of the data?**

A. The data was derived from the books, financial records and managers of the RLEC. Data was also obtained from switch vendors, engineering consultants, tariffs, service order administration service bureaus, the number portability administration center, a number portability database provider, and my professional experience.

**Q7. What was the purpose of obtaining that particular data?**

A. To assist me in preparing an estimate of the costs to implement LNP for the RLEC.

**Q8. Is this the type of data that experts in your field would ordinarily review in formulating an opinion concerning the costs of LNP?**

A. Yes.

**Q9. What use did you make of the data after you received it from the RLEC?**

A. I have explained the use of the data on pages eleven through twenty-one of my “introductory” testimony.

**Q10. Have you reached an opinion with a reasonable degree of professional certainty as to the total non-recurring costs, excluding transport, to implement LNP that you have calculated for the RLEC that will be recovered over a 5-year recovery period through an end user surcharge?**

A. Yes. My opinion is that the total non-recurring costs, excluding transport, is \$234,342. Such costs were amortized over a recovery period of 60 months using a rate of return of 11.25%. The total nonrecurring costs per month, excluding transport, amortized over five years is \$5,124.

**Q11. Have you reached an opinion with a reasonable degree of professional certainty as to the total recurring costs, excluding transport, to implement LNP that you have calculated for the RLEC and that will be recovered from end users on an ongoing monthly charge basis?**

A. Yes. The amount is shown on Exhibit 2, and is calculated to be \$9,227 per month.

**Q12. Have you reached an opinion with a reasonable degree of professional certainty as to the total cost, excluding transport, per line per month that would be charged to end-users if LNP were to be implemented by the RLEC?**

A. Yes, The amount is shown on Exhibit 2. This amount was calculated by adding the total nonrecurring costs per month amortized over five years to the total recurring costs per month, both amounts excluding transport costs, and dividing this sum by the RLEC's total access lines. The resulting cost per line per month was calculated to be \$0.48.

**Q13. Have you reached an opinion with a reasonable degree of professional certainty as to the total LNP costs and the monthly amount recovered from each end-user if the FCC determines that transport costs should be included in the LNP costs recovered from end-users?**

A. Yes, These amounts are shown on Exhibit 2. The total nonrecurring and recurring costs, including transport costs, were calculated to be \$68,908 per month. The resulting LNP cost per line, per month, including transport, was calculated to be \$2.29.

**Q14. If FCC determines that transport costs should not be included in the end-user surcharge, will the transport cost still be incurred and who will pay these costs?**

A. Transport costs will have to be incurred to transport calls outside of the RLEC's service area. If the cost is not recovered through an end-user surcharge, and if these costs are not recovered from the wireless carrier, then the only party to pay these costs would be the RLEC.

**Q15. Is it your opinion that the calculations that you have just described fairly and reasonably describe the non-recurring and recurring costs for the RLEC to implement LNP and the end user charges to recover such costs?**

A. Yes.

**Q16. Does this conclude your testimony?**

A. Yes, it does.

**BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA**

<b>IN THE MATTER OF THE LOCAL NUMBER PORTABILITY SUSPENSION DOCKETS</b>	) ) ) ) ) )	<b>ORDER ESTABLISHING BRIEFING AND DECISION SCHEDULE TC04-025, TC04-038, TC04-044- 056, TC04-060-062, TC04-077, TC04-084-085</b>
---	----------------------------	--

At the conclusion of the hearing in the dockets requesting suspension of local number portability (LNP) obligations on July 1, 2004, the issue of the briefing and decision meeting schedule was left open due to the absence of counsel for many of the parties. Also not decided was whether oral argument was desired. Following the hearing, counsel for the Commission engaged in an exchange of email with counsel for the parties and discussed with the Commissioners their desire to hear oral argument. Counsel for the parties agreed that there should be oral argument if the Commissioners desired to hear it. Having considered the comments and requests of the parties regarding the schedule and of the Commissioners regarding oral argument, it is

ORDERED, that the schedule for filing and service of briefs and for the decision hearing by the Commission in the above-referenced dockets will be as follows (all dates 2004):

July 7	Transcripts received
Aug 5	Petitioners' and SDTA's briefs due
Aug 20	Intervenors' and Staff's briefs due
Aug 27	Petitioners' and SDTA's reply briefs due
Aug 31	Decision hearing (at least one Commissioner has requested oral argument)
Sep 7	Decisions issued in at least Kennebec, Santel, Sioux Valley, Golden West, and Armour/Bridgewater-Canistota/Union; and it is further

ORDERED, that because of the abbreviated schedule in these cases, all briefs will be served by email or by fax on all counsel for the parties to the applicable docket(s) on or before the above due dates in addition to the ordinary means of service on counsel; and it is further

ORDERED, that counsel may incorporate their argument pertaining to multiple or all of the LNP dockets in one brief; and it is further

ORDERED, that a decision hearing will be held on August 31, 2004, at 1:30 P.M. CDT in Room 412 of the State Capitol Building, 500 East Capitol Avenue, Pierre, SD, at which time the Commission will render decisions on at least Kennebec, Santel, Sioux Valley, Golden West, and Armour/Bridgewater-Canistota/Union. The parties may present oral argument at this hearing if they desire.

Dated at Pierre, South Dakota, this 13th day of July, 2004.

**CERTIFICATE OF SERVICE**

The undersigned hereby certifies that this document has been served today upon all parties of record in this docket, as listed on the docket service list, by facsimile or by first class mail, in properly addressed envelopes, with charges prepaid thereon.

(OFFICIAL SEAL)

BY ORDER OF THE COMMISSION:

Robert K. Sahr  
ROBERT K. SAHR, Chairman *dk*

Gary Hanson  
GARY HANSON, Commissioner

James A. Burg  
JAMES A. BURG, Commissioner

**BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA**

<b>IN THE MATTER OF THE PETITION OF</b>	)	<b>ORDER TEMPORARILY</b>
<b>KENNEBEC TELEPHONE COMPANY FOR</b>	)	<b>SUSPENDING LOCAL</b>
<b>SUSPENSION OR MODIFICATION OF 47</b>	)	<b>NUMBER PORTABILITY</b>
<b>U.S.C. § 251(B)(2) OF THE COMMUNICATIONS</b>	)	<b>OBLIGATIONS</b>
<b>ACT OF 1934 AS AMENDED</b>	)	<b>TC04-025</b>

On February 12, 2004, Kennebec Telephone Company (Kennebec or Petitioner) filed a petition pursuant to 47 U.S.C. Section 251(f)(2) and SDCL 49-31-80 seeking suspension or modification of its requirement to implement local number portability (LNP) pursuant to Section 251(b)(2) of the Telecommunications Act of 1996. On April 5, 2004, the Commission issued an order granting intervention to WWC License LLC d/b/a CellularOne and the South Dakota Telecommunications Association. On April 19, 2004, the Commission issued an order granting Kennebec's request for interim suspension of its obligation to implement LNP pending final decision pursuant to 47 U.S.C. Section 251(f)(2) of the Telecommunications Act of 1996 and SDCL 49-31-80.

The Commission has jurisdiction in this matter pursuant to SDCL 49-31-80, Section 251(f)(2) of the Telecommunications Act of 1996, 47 U.S.C. § 251(f)(2) and ARSD 20:10:32:39.

On June 21-July 1, 2004, a hearing was held on this matter and the other dockets in which rural LECs seek to suspend their obligations to implement LNP. Pursuant to 47 U.S.C. § 251(f)(2) and SDCL 49-31-80, the Commission is required to render its decision in this matter within 180 days after the filing of the petition. The parties to this docket have agreed that a temporary suspension should be granted in this docket to enable a reasonable briefing and decision schedule on this and the other LNP suspension dockets. It is therefore

ORDERED, that Petitioner's obligation to implement local number portability is temporarily suspended, pursuant to 47 U.S.C. § 251(f)(2) and ARSD 20:10:32:39, until September 7, 2004, by which date the Commission will issue a final order in this docket.

Dated at Pierre, South Dakota, this 15<sup>th</sup> day of July, 2004.

<p><b>CERTIFICATE OF SERVICE</b></p> <p>The undersigned hereby certifies that this document has been served today upon all parties of record in this docket, as listed on the docket service list, by facsimile or by first class mail, in properly addressed envelopes, with charges prepaid thereon.</p> <p>By: <u>Melaine Kolbo</u></p> <p>Date: <u>7/15/04</u></p> <p align="center">(OFFICIAL SEAL)</p>

RECEIVED

JUL 20 2004

July 19, 2004

SOUTH DAKOTA PUBLIC  
UTILITIES COMMISSION

Talbot J. Wieczorek  
Gunderson, Palmer, Goodsell & Nelson  
P.O. Box 8045  
Rapid City, SD 57709-8045

Dear Mr. Wieczorek:

Per your e-mail last Friday, it was brought to my attention that Cheyenne River Exhibits 1 through 5 were shown on the index page as having not been offered or received and that, in fact, they were received on page 1065 of the transcript.

I have made the necessary changes on the index page to reflect that the exhibits are part of the record and have enclosed a copy of the corrected index page.

Please call or e-mail me if you have any questions.

Sincerely,

Cheri McComsey Wittler, RPR, CRR

**POST-HEARING BRIEF OF PETITIONERS AND SDTA**

Submitted on behalf of the above-named Rural Local Exchange Carriers and  
the South Dakota Telecommunications Association

August 5, 2004

## INTRODUCTION

Pending before the Public Utilities Commission of the State of South Dakota (“Commission”) are 20 Petitions<sup>1</sup> filed by rural telephone companies pursuant to 47 U.S.C. §251(f)(2) seeking suspension or modification of the requirements of 47 U.S.C. §251(b)(2) concerning number portability, including suspension or modification of the requirements set forth In the Matter of Telephone Number Portability, CC Docket 95-116, Memorandum Opinion and Order and the Further Notice of Proposed Rulemaking, FCC 03-284 (released November 10, 2003) (“*November 10 Order*”), insofar as the Order requires these Petitioners to implement local number portability (“LNP”).

The *November 10 Order* obligates local exchange carriers located outside the top 100 metropolitan statistical areas (MSAs) to provide LNP and to port numbers to wireless carriers when certain conditions have been met. Such obligation commenced on May 24, 2004, or commences within six months of the date that the wireline carrier receives a bona fide request for LNP from a commercial radio service (“CMRS”) provider. (*November 10 Order* at ¶29.)

In §251(f)(2) of the Act, Congress granted state commissions jurisdiction to suspend or modify the application of a requirement of §251(b) or (c) for “two percent rural carriers,” which includes a suspension of the requirement to provide LNP.<sup>2</sup> Each of the Petitioners in this case is seeking suspension or modification of the requirement to implement LNP. Thus, the fundamental question presented in this proceeding is whether the Commission should suspend or modify

---

<sup>1</sup> Initially, 21 companies filed Petitions with the Commission requesting suspension or modification of LNP requirements. Subsequently, two Petitioners (CRST and James Valley) entered into settlement stipulations with Western Wireless. CRST’s settlement position is that the Commission’s ultimate disposition of transport issues may affect third parties, other than Western Wireless, which has its own transport arrangement with CRST. For this reason only, CRST’s docket number is included in the caption of this brief.

<sup>2</sup> It is undisputed that each of the Petitioners in the pending applications constitute carriers with less than 2% of the nation’s subscriber lines, nationwide.

the Petitioners' requirements to implement LNP, both wireline to wireline and wireline to wireless.

The Petitioners represent that when the Commission considers the initial and ongoing costs of implementing LNP, the Commission will conclude that such costs create a significant adverse economic impact on users of telecommunications services generally and, to the extent that any costs are not recovered by an end user LNP surcharge, on the individual Petitioners themselves. Specifically, each company estimated the increase in a subscriber's monthly local service cost that would result from the implementation of LNP. Additionally, each company estimated the total increase in a subscriber's local service cost if the company is required to absorb the cost of transporting calls to ported numbers outside of Petitioner's local service area. While recognizing that the Federal Communications Commission ("FCC") has determined that local exchange carriers ("LECs") must implement LNP to wireless providers, each Petitioner contends that the *November 10 Order* does not address issues relating to the routing of calls to ported numbers in those cases in which no direct connection exists between carriers. Further, the Petitioners assert that in light of current routing arrangements, it is technically infeasible to complete calls on a local basis to telephone numbers ported to a wireless provider. Finally, Petitioners demonstrated through evidence that there is little or no public demand for LNP. As a result, the Petitioners believe it is not consistent with the public interest, convenience and necessity to expend the significant investment necessary to deploy LNP.

All of the remaining Petitioners and Intervenor SDTA hereby submit this Post-Hearing Brief in support of their request that the Commission suspend or modify the LNP requirement in Section 251(b)(2) of the Act. Based on the evidence presented at the hearing in this matter, each Petitioner has demonstrated that it satisfies the requirements of Section 251(f)(2) and SDCL 49-

31-80. Accordingly, the Commission should grant continued suspension or modification of the requirement of Petitioners to provide LNP.

#### PROCEDURAL HISTORY

By twenty separate Petitions filed by rural telephone companies, beginning with Kennebec Telephone Company (“Kennebec”) on February 12, 2004, and most recently, Tri-County Telcom, Inc. (“Tri-County”) on April 23, 2004, said carriers are seeking suspension or modification of the FCC’s requirement to implement LNP. Notice of the filing of each of the Petitions was electronically transmitted by the Commission in accordance with this Commission’s Administrative Rules. Petitions for intervention were filed by WWC License, LLC (“WWC” or “Western Wireless”) in each docket; by South Dakota Telecommunications Association (“SDTA”) in each docket; and by Midcontinent Communications (“Midcontinent”) in eight of the dockets. Intervention was granted to each party petitioning for intervention.

Each of the Petitioners requested the Commission to (1) issue an interim order that suspends any obligation that may exist for Petitioner to provide LNP until six months after entry of a final order; (2) issue a final order that grants a permanent suspension or modification of Petitioner’s obligation to implement LNP until conditions are met as described in the Petition; and (3) grant Petitioner such other and further relief that may be proper. At a regularly scheduled meeting on April 6, 2004, the Commission heard arguments from Petitioners, WWC, and SDTA regarding the Petitioners’ requests for an order granting interim suspension. Pursuant to 47 U.S.C. §251(f)(2) and SDCL 49-31-80, the Commission granted the requests for an interim suspension order pending final decision.

By Orders dated May 4, 2004, and June 16, 2004, the Commission implemented a Procedural Schedule in each of the dockets that established a timeline for discovery, a schedule for the

presentation of prefiled testimony and exhibits of all the parties, and dates for administrative hearings in the dockets. On June 21, 2004, through July 2, 2004, pursuant to that schedule, hearings were held before the Commission in each docket. Petitioners presented testimony through the following witnesses: Steven E. Watkins, a telecommunications consultant specializing in LNP issues, affiliated with the law firm of Kraskin, Mormon and Cosson in Washington, D.C. (SDTA Exhibits 1, 2; Tr. 495-526); John DeWitte, Vice President of Engineering for Vantage Point Solutions, Mitchell, South Dakota, who presented cost evidence on behalf of Interstate Telecommunications Cooperative, Inc. (“ITC”), Stockholm-Strandburg Telephone Company (“Stockholm”), Venture Communications Cooperative (“Venture”), West River Cooperative Telephone Company (“West River”), and Swiftel Communications (“Swiftel”) (Brookings Ex. 3, Stockholm Ex. 3, Venture Ex. 3, West River Ex. 3, ITC Exs. 4(A) and 4(B); Tr. 135-290; 454-492; 1085-1089; 1121-1125); Tom Bullock and Dan Davis, both consultants with TELECOM Consulting Resources, Omaha, Nebraska, office, who presented cost evidence on behalf of the remaining Petitioners (except CRST) (Valley Ex. 3, Faith Ex. 3, Golden West Ex. 3, Armour Ex. 3, Sioux Valley Ex. 3, Bullock Exs. 1, 2, 3, Alliance Ex. 3, Tri-County Ex. 1, Western Ex. 1, Davis Exs. 1 and 2, Midstate Ex. 3, Beresford Ex. 3, Kennebec Ex. 3, Roberts County Ex. 3; Tr. 83-917; Tr. 989-1015; 1037; 1054-1056). In addition, the general managers of most of the petitioning companies presented testimony throughout the course of the hearings. WWC presented its case through the testimony of Ron Williams (WWC Ex. 1; Tr. 529-591; 600-713; 925-940; 1019-1035; 1058-1059; and 1129-1134).

Thereafter, on July 13, 2004, the Commission entered an Order Establishing Briefing and Decision Schedule in all of the remaining LNP dockets. On July 15, 2004, the Commission extended Petitioner Kennebec’s suspension of obligation to implement LNP, pursuant to 47 U.S.C.

§251(f)(2) and ARSD 10:10:32:39, until September 7, 2004, which is the date for final Commission order in all dockets.

## I.

### **THE SOUTH DAKOTA PUBLIC UTILITY COMMISSION HAS JURISDICTION TO SUSPEND LOCAL NUMBER PORTABILITY OBLIGATIONS PURSUANT TO DEFINED FEDERAL STANDARDS**

As set forth in Petitioners' pleadings initiating these consolidated proceedings, the FCC has set forth requirements for the implementation of LNP, pursuant to 47 U.S.C. § 251(b)(2), applicable to the Petitioners. See e.g. Petition of Interstate Telecommunications Cooperative, Inc. (ITC), p. 2. Specifically, the FCC has set forth rules concerning the implementation of LNP by wireline carriers in sections 52.23-52.29 and 52.32-52.33 of its rules. 47 C.F.R. §§52.23-52.29 and 52.32-52.33. Further, pursuant to the *November 10 Order*, the FCC has required that local exchange carriers outside the largest 100 Metropolitan Statistical Areas (MSAs) provide LNP and port numbers to wireless carriers beginning May 24, 2004, or within six months of the date upon which a bona fide request has been received by such carrier. The *November 10 Order* is currently before the U.S. Court of Appeals for the District of Columbia Circuit, in United States Telecom Association v. FCC, case nos. 03-1414 and 03-1443. The Order has not been stayed by the FCC itself, nor the D.C. Circuit.

The requirements of this Order went far beyond existing rules for LNP between wireline carriers, which rules limited portability between such carriers to the LEC rate center. Specifically, the *November 10 Order* found that LECs must implement LNP to allow porting to wireless carriers, even where the wireless carrier does not have a point of interconnection or telephone numbers in a particular LEC's rate center. Moreover, the Order applied this new requirement in a discriminatory way. It did not require wireless carriers to allow porting back to wireline carri-

ers where a “mismatch” exists – a frequent occurrence – between wireline and wireless rate centers. Rather, the FCC only instituted a rulemaking to consider this issue, while requiring wireline LECs nevertheless to proceed with such one-sided porting.

The Petitioners are all eligible to request suspension of the FCC’s LNP requirements from this Commission, and this Commission has jurisdiction to grant the suspension request. Section 251 (f)(2) frames both this Commission’s jurisdiction, and the standards to be met for the suspension of the LNP requirements. As to jurisdiction, this section reads in pertinent part, that “a local exchange carrier with fewer than two percent of the nation’s subscriber lines installed in the aggregate nationwide may petition a state Commission for modification” of the number portability requirements.

The Petitioners all easily fall below this “two percent” threshold; indeed their eligibility to request suspension based on the two percent size threshold is undisputed on the record.

Western Wireless witness Ron Williams attempted a sophistical attack on this Commission’s jurisdiction by suggesting, apparently, that the LNP suspension requests were waiver requests over which the FCC exercised jurisdiction. (Tr. 565). He later admitted that the FCC document he relied upon in fact recognized state commission jurisdiction under Section 251(f) and further that FCC Chairman Powell had, shortly before the hearing, issued a letter to the President of NARUC. In that letter, Chairman Powell urged close consideration of rural LEC LNP “waiver” requests (technically known as suspension or modification requests under the statute) filed with state commissions by rural LECs. (Tr. 565-68; Venture Ex. 4). Ultimately, when questioned by Vice-Chairman Hanson on the question of jurisdiction, Mr. Williams conceded “this is a good forum to resolve this.” (Tr. 659). That the petitioning LECs here are eligible to seek suspension of the FCC’s LNP requirements, and that this Commission has jurisdic-

tion to grant the suspension requests under Section 251(f)(2), are clear both as a matter of record and law.

The statutory standards that govern state commission-ordered suspensions or modifications are equally straightforward. Pursuant to Section 251(f)(2), the Commission shall grant a petition for suspension or modification to the extent that, and for such duration as, the Commission determines that such suspension or modification:

- (A) Is necessary:
  - i. to avoid a significant adverse economic impact on users of telecommunications services generally;
  - ii. to avoid imposing a requirement that is unduly economically burdensome; or to avoid imposing a requirement that is technically infeasible; and
- (B) is consistent with the public interest, convenience and necessity.

47 U.S.C. § 251(f)(2).

The correct application of the foregoing statutory standard was described by the United States Court of Appeals for The Eighth Circuit in Iowa Utilities Board v. Federal Communications Commission, 219 F.3d 744 (8<sup>th</sup> Cir. 2000)(IUB II) in a proceeding on remand from the United States Supreme Court. There, the Court construed the language of “undue economic burden” found in Section 251(f)(2)(A). In finding that the FCC had gone too far in its construction of the meaning of “undue economic burden,” the Court noted that such undue economic burden is just one of three bases upon which suspension or modification may be granted under Section 251(f)(2)(A). 219 F.3d at 761. *See also*, Order Granting Suspension, Nebraska Public Service Commission (*Nebraska Order*); Application Nos. C-3096 et seq., p.6 (“Applicants required to establish at least one of the criteria listed in Section 251(f)(2)(A) and that suspension is consistent with public interest, convenience and necessity”).

When the record of this proceeding is examined against the statutory framework discussed above, it is abundantly clear that suspension and modification of the LNP requirements are warranted. Demand for LNP is virtually non-existent in Petitioners' customer base, due in no small part to the sorry state of wireless coverage in rural South Dakota. Against this complete lack of demand, as almost every manager testified and as is recounted in detail later in this brief, are very real costs for implementing LNP. Whether these costs turn up as monthly LNP surcharges or as general rate increases, they still constitute "adverse economic impact" and "undue economic burden" within Section 251(f)(2)(A) of the statute, particularly given the very questionable "benefit" that LNP will bring to rural customers.

The balance of this brief focuses on the very real costs of LNP, (including the issue of transport responsibility and its broad implications for the industry), and the public interest consequences of LNP implementation devoid of any tangible benefits. And while the Commission considers this calculus, it should bear in mind the apparent cynicism of LNP's advocate in chief, Western Wireless. In this respect, Mr. Williams admitted that the company projected zero ports for the city of Faith, despite requesting LNP from it. (Tr. 586-87). He further admitted that until recently, Western Wireless was in fact opposed to LNP. (Tr. 574-75). South Dakota's consumers deserve better use of the PUC's regulatory machinery, and its grant of the requested suspensions clearly will serve that purpose.

## II.

### **PETITIONERS HAVE MET THE REQUIREMENTS OF SECTION 251(F)(2)(A).**

Pursuant to Sections 251(f)(2)(A)(i) and (ii), Petitioners have demonstrated that a suspension or modification of the LNP requirement is necessary "to avoid a significant adverse economic impact on users of telecommunications services generally" and "to avoid imposing a re-

quirement that is unduly economically burdensome.” As discussed below, each Petitioner has presented detailed information concerning the costs that will be incurred to implement LNP, including switch software and hardware costs, LNP service order and query costs, and the technical and administrative costs associated with implementing LNP. There is no dispute that Petitioners will incur such costs to implement LNP. The Petitioners also have presented information concerning the transport issue and its related cost. The transport issue and the costs associated with transport are much in dispute and will be addressed separately in this brief.

**A.**

PETITIONERS HAVE DEMONSTRATED THAT A SUSPENSION OR  
MODIFICATION OF THE LNP REQUIREMENT IS NECESSARY “TO AVOID  
A SIGNIFICANT ADVERSE ECONOMIC IMPACT ON USERS OF TELECOMMUNICA-  
TIONS SERVICES GENERALLY”

Petitioners’ cost exhibits and testimony present the known cost elements and amounts that will be incurred if Petitioners are required to implement LNP. Petitioners did not limit their cost showing only to the costs that will be included in the federal LNP surcharge. This was to reflect the full cost burden of LNP that will impact consumers and the Petitioners.

Most of the costs shown by Petitioners are not disputed by Intervenors and where certain costs are disputed, the arguments are not valid. Western Wireless disputes certain costs identified by some Petitioners, such as switch costs, because it alleges the particular cost cannot be recovered through the federal LNP surcharge. This criticism, however, is misplaced and improperly seeks to limit the expansive review that is to be undertaken by state commissions pursuant to section 251(f)(2). Rather, the duty of this Commission is to consider all economic impacts—even those that may not be easily identifiable on end-user telephone bills through the federal LNP surcharge.

In other cases, Western Wireless disputes an element of Petitioner's cost exhibit because it contends that Petitioner should have used a more cost efficient methodology. For example, Western Wireless generally disputes the method used by Petitioners to provide transport, however it does not dispute the cost amount projected by Petitioners for their method. Similarly, Western Wireless disputes including costs for an automated Service Order Administration (SOA) process because it argues that an automated process cannot be justified in light of the small number of projected ports. Western Wireless, however, does not dispute what an automated SOA service would cost.

The Commission should not be tempted by Western Wireless' false arguments to simply reject certain costs projected by Petitioners because there may be a "cheaper" alternative. There is no requirement that Petitioners implement LNP in the cheapest way possible. And, as demonstrated in the record, there are valid business reasons why a company may not select the least cost alternative. For example, a company may choose to implement an automated SOA process to be able to process ports in a shorter time-frame. The real fallacy of Western Wireless' argument, however, is that the costs Western Wireless urges this Commission to reject will impact consumers, to their detriment. Therefore, the Commission must consider all costs identified by Petitioners to make an accurate determination of the impact of LNP.

In any event, the most striking aspect of the evidence on the cost issue is that, other than the dispute over the cost of transport, Western Wireless' estimates for the cost of LNP, in many cases, are fairly close to the Petitioners' estimates and, in the remaining cases, even Western Wireless' cost estimates are significant. Thus, even though Western Wireless has disputed some aspects of the costs presented by Petitioners, by Western Wireless' own estimates the cost of LNP, even without transport, would have "a significant adverse economic impact on us-

ers of telecommunications services generally” and would impose “a requirement that is unduly economically burdensome.”

A company specific discussion of the costs elements in dispute follows:

Companies represented by John De Witte

1. Swiftel (TC04-047)

Swiftel’s projected cost of LNP, excluding transport, ranges from \$0.74 per line per month in the first year after implementation to \$0.83 per line per month in the fifth year after implementation. (ITC Ex. 4B) Western Wireless projects the cost at \$0.68 to \$0.76. (WWC Ex. 9)

Western Wireless disputes the use of an automated SOA process by Swiftel and, instead, argues that the cost exhibit should only reflect the cost of a manual SOA process. As alleged by Western Wireless, this would reduce the SOA non-recurring cost by \$1,000 and it would reduce the monthly recurring cost by \$100. Western Wireless’ revised cost estimate should be rejected because there are valid business reasons to use an automated SOA mechanism. An automated mechanism will be necessary if the porting interval is reduced (ITC Ex. 4 at 6); and it reduces the need for additional personnel for LNP. In addition, once the LNP surcharge is established, carriers are allowed to change the surcharge only in special circumstances. (Tr. 484). Therefore, even if current circumstances, such as porting volumes and porting interval, may not require an automated process, a carrier must implement LNP in anticipation of changed circumstances in order to ensure that its LNP mechanisms and its cost recovery is appropriate for the long term.

Western Wireless also alleges that the monthly recurring marketing cost projected by Swiftel of \$1,000 is not justified. As explained by Mr. De Witte, however, this cost estimate assumes a single annual mailing of an informational flyer to customers to explain LNP. The recurring cost is based on a price quote from a marketing firm that the printing cost of an informa-

tional flyer would be approximately \$800 per 1,000 copies. In 2003, Swiftel had approximately 14,057 access lines. Assuming each access line would receive the informational flyer with their bill, the annual cost to print the flyer would be approximately \$12,000. This cost, represented as a monthly recurring cost, is \$1,000 per month. (ITC Ex. 4 at 8).

Accordingly, Swiftel's projected cost should be accepted.

## 2. ITC (TC04-054)

ITC's projected cost of LNP, excluding transport, ranges from \$0.54 per line per month in the first year after implementation to \$0.61 per line per month in the fifth year after implementation. (ITC Ex. 4B) Western Wireless projects the cost at \$0.55 to \$0.62. (WWC Ex. 9).

Western Wireless disputes the use of an automated SOA process and, instead argues that the cost exhibit should only reflect the cost of a manual SOA process. As alleged by Western Wireless, this would reduce the non-recurring SOA cost by \$1,000 and the recurring cost by \$100 per month. For the same reasons as discussed for Swiftel, Western Wireless' cost revision on this point should be rejected.

Western Wireless argues that the entire recurring cost for testing, translations and administrative functions, totaling \$380 per month, should be eliminated because it is overstated and redundant. As demonstrated by Mr. De Witte, however, this expenditure is necessary "to perform tests for each ported number as the port is requested to ensure that the ported number route correctly flows through the Petitioner's network." (ITC Ex. 4 at 8). This cost was derived based on Petitioner's estimate that Translations activities for each port will require approximately one hour at a loaded hourly rate of \$46 per hour. This equates to approximately \$90 per month. Further, the Petitioner estimates that Testing and Verification activities for each port will require approximately one hour at a loaded hourly rate of \$46 per hour. This equates to approximately

\$90 per month. For the administrative functions, the Petitioner estimates that this function will require for each consumer approximately 2.5 hours at \$41 per hour. This equates to approximately \$200 per month at a rate of 2 ports per month. Accordingly, these costs are justified and should be included.

Western Wireless disputes the monthly recurring marketing cost projected by ITC of \$1,000. For the same reasons as discussed for Swiftel, Western Wireless' cost revision on this point should be rejected.

ITC's projected cost of providing LNP in the Webster exchange as requested by Midcontinent is over \$2.00 per line per month for five years and approximately \$1.47 per line per month thereafter. Midcontinent provides no evidence to dispute any of the costs presented by ITC in connection with the provision of LNP in the Webster exchange. Midcontinent questioned the estimated per line charge, however, and argued that the cost of LNP associated with the Webster exchange should have been spread over ITC's entire customer base. (Tr. 211-214) Midcontinent is simply wrong on this point as the FCC's rules only allow carriers to assess a federal LNP surcharge to customers for whom LNP is available. If ITC is directed to implement LNP as requested by Midcontinent, LNP will be available only in the Webster exchange and ITC would be allowed to assess a federal LNP surcharge only to its customers served by the Webster exchange. Moreover, this is the only fair allocation method. ITC's method of calculating the per line charge, therefore, is correct.

Accordingly, ITC's projected costs for providing LNP company-wide and for providing LNP to Midcontinent in the Webster exchange only should be accepted.

### 3. Stockholm (TC04-062)

Stockholm's projected cost of LNP, excluding transport, ranges from \$4.99 per line per month in the first year after implementation to \$5.58 per line per month in the fifth year after implementation. (ITC Ex. 4B) Western Wireless projects the cost at \$2.62 to \$2.93. (WWC Ex. 9).

The majority of the difference in these estimates results because Western Wireless removes \$35,000 in non-recurring switch hardware requirements and \$15,000 in additional non-recurring software features. These upgrades are required to support the addition of AMA recording capabilities that will be required to allow the Petitioner to record and bill traffic (including LNP traffic). Western Wireless provides no explanation for this change.

Western Wireless disputes the use of an automated SOA process and, instead argues that the cost exhibit should only reflect the cost of a manual SOA process. As alleged by Western Wireless, this would reduce the non-recurring SOA cost by \$2,000 and the recurring cost by \$500 per month. For the same reasons as discussed for Swiftel, Western Wireless' cost revision on this point should be rejected.

Western Wireless disputes the monthly recurring marketing cost projected by Stockholm of \$67. For the same reasons as discussed for Swiftel, Western Wireless' cost revision on this point should be rejected.

Western Wireless reduces the non-recurring customer care cost from \$10,000 to \$5,000. This is the estimated cost for a 5 day on-site training session for the customer care system. Western Wireless offers no explanation for its reduction. Therefore, the reduction should be rejected.

4. Venture (TC04-060)

Venture's projected cost of LNP, excluding transport, ranges from \$0.55 per line per month in the first year after implementation to \$0.61 per line per month in the fifth year after implementation. (ITC Ex. 4B) Western Wireless projects the cost at \$0.53 to \$0.59. (WWC Ex. 9).

Western Wireless argues that the non-recurring SOA cost should be reduced by \$200 and provides no support for this position. Therefore, it should be rejected.

Western Wireless disputes the monthly recurring marketing cost projected by Swiftel of \$933. For the same reasons as discussed for Swiftel, Western Wireless' cost revision on this point should be rejected.

Accordingly, Venture's projected cost should be accepted.

5. West River (TC04-061)

West River's projected cost of LNP, excluding transport, ranges from \$0.93 per line per month in the first year after implementation to \$1.04 per line per month in the fifth year after implementation. (ITC Ex. 4B) Western Wireless projects the cost at \$1.17 to \$1.31. (WWC Ex. 9)

Western Wireless disputes the use of an automated SOA process and, instead argues that the cost exhibit should only reflect the cost of a manual SOA process. As alleged by Western Wireless, this would reduce the non-recurring SOA cost by \$2,000 and the recurring cost by \$223 per month. For the same reasons as discussed for Swiftel, Western Wireless' cost revision on this point should be rejected.

Western Wireless disputes the monthly recurring marketing cost projected by West River of \$267. For the same reasons as discussed for Swiftel, Western Wireless' cost revision on this point should be rejected.

Accordingly, West River's projected cost should be accepted.

6. Santel (TC04-038)

Santel's projected cost of LNP, excluding transport, ranges from \$0.78 per line per month in the first year after implementation to \$0.87 per line per month in the fifth year after implementation. (ITC Ex. 4B). Western Wireless projects the cost at \$0.61 to \$0.69. (WWC Ex. 9).

Western Wireless disputes Santel's cost amounts for SOA service; recurring testing, translations and administrative cost; and recurring marketing cost. For the same reasons as discussed previously, Western Wireless' cost revisions on these points should be rejected.

Accordingly, Santel's projected cost should be accepted.

Companies represented by Tom Bullock

7. Alliance and Splitrock (TC04-055)

In the case of Alliance, Mr. Bullock estimated the total LNP non-recurring costs (excluding transport) at \$158,353.00, and total recurring monthly costs (excluding transport) at \$3,668.00. WWC disputed only three aspects of Alliance's cost figures, aside from transport. In the category of "Switch Upgrade Costs," Alliance's estimated cost was \$94,308.00, compared with WWC's estimated cost of \$62,743.00 (Bullock Ex. 3; WWC Exhibit 15). The basic difference between these two figures results from "equipped line" counts. Petitioner's estimate is the correct one, as it is based upon actual counts of equipped lines in the DMS-10 switches for Alliance and Splitrock. (Tr. 836).<sup>3</sup> These numbers were based upon actual contact with the vendor, as opposed to a speculative calculation based upon a formula that Mr. Williams apparently concocted for Alliance. (Tr. 930-931).

The second category with which WWC differed in the Alliance case is "Other Internal Costs," wherein Mr. Bullock's cost estimate was \$33,532.00, and Mr. Williams' was

---

<sup>3</sup> Mr. Bullock submitted a corrected Exhibit 3 to the Commission after the hearing to reflect the corrected counts of equipped lines. (Bullock Ex. 3)

\$15,000.00. In fact, Mr. Williams arbitrarily inserted \$15,000.00 as “Other Internal Costs” for all Petitioners, based upon his unsubstantiated “nonarithmetic mean” for Petitioners, apparently derived by utilizing the services of SDTA to negotiate contracts. (Tr. 934). By contrast, Alliance (and all other Petitioners) based its “Other Internal Cost” estimate upon Alliance’s past experience of negotiating contracts with Western Wireless and other carriers. “Negotiating as a group” was also taken into consideration in Alliance’s final cost in the “Other Internal Costs” category. (Tr. 851).

The final dispute between WWC’s cost estimates for Alliance and Mr. Bullock’s is contained in the category entitled “Other Monthly Costs”, \$2,068.00 in Mr. Bullock’s Exhibit 3 versus \$488.00 in Exhibit 15. Once again, Mr. Williams arbitrarily reduced this figure based upon his estimates of how long it would take each company to port a number. (Tr. 935). Mr. Bullock’s calculation is based upon evidence that there will be very little demand for porting, thus no one will become very proficient with the porting process, which will result in more time to port numbers. (Tr. 854). As shown, the evidence substantiates Mr. Bullock’s cost calculations.

8. Armour, Bridgewater-Canistota, and Union (TC 04-046)

For this group of Petitioners, Mr. Bullock’s final cost estimates (excluding transport) do not differ significantly from WWC’s estimates. Petitioner estimated total non-recurring costs for LNP implementation at \$121,276.00, and total monthly recurring costs at \$1,591.00. The differences are found in the “Other Internal Costs” (\$35,152 versus \$15,000); “SOA Monthly Charge” (\$225.00 versus \$165.00); and “LNP Query Costs per Month” (\$750.00 vs. \$412.00). In addition, WWC estimated more ports for this group of companies than did Mr. Bullock. The explanation for the differences in the first two categories is the same as for Alliance.

Petitioner's estimate for the LNP query costs per month is based upon actual quotes received from a query service provider (Tr. 852). Mr. Williams, on the other hand, provided no explanation or justification for his lower estimate. Mr. Williams conceded, however, that the cost estimate differences (excluding transport) for this Petitioner were not significant. (Tr. 933). Therefore, Petitioner's costs estimates are basically uncontested.

9. Faith (TC04-051)

By any cost consultant's calculations, the cost of LNP implementation in the case of Petitioner Faith, even excluding transport, is very high. Non-recurring LNP costs were estimated by Mr. Bullock at \$42,565.00, and recurring monthly costs at \$285.00. This translates to LNP cost per line per month, excluding transport, of \$3.10. (Bullock Ex. 2, Ex. R-1-TB; WWC Exhibit 15). While WWC had very minor cost disagreements with Mr. Bullock's estimates, the conclusion reached by both cost consultants was the same: "Faith is one of the companies that would have significant costs," and Faith's application for suspension of the requirement to implement LNP should be granted. (Tr. 933).

10. Golden West, Vivian, and Kadoka (TC04-045)

For this group of Petitioners, Mr. Bullock estimated the total non-recurring monthly costs (excluding transport) at \$233,468.00, and total recurring monthly costs (excluding transport) at \$5,400.00. (Bullock Ex. 3)<sup>4</sup> The most significant difference between WWC's cost estimates for Golden West, et al and Mr. Bullock's estimates is reflected in the "Switch Upgrade Costs" category. Mr. Bullock revised his switch upgrade cost based upon a price quote from Nortel (Bullock Ex. 3, WWC Exhibit 15). Without any justification other than it was a lower figure and the first one provided by Mr. Bullock in original Exhibit 1, Mr. Williams used Mr. Bullock's origi-

---

<sup>4</sup> Mr. Bullock submitted a corrected Exhibit 3 to the Commission after the hearing to reflect several changes in information (Tr. 842), including corrected switch costs (Tr. 933). (Bullock Ex. 3)

nal switch upgrade cost estimate. (Tr. 934). Mr. Williams' estimate for LNP Query costs per month was actually higher than Mr. Bullock's figure, undoubtedly because Mr. Williams estimated 1076 ports per year, while Mr. Bullock estimated 240. Other differences were consistent with the other Petitioners, but overall, the cost differences, excluding transport, were not significant. (Tr. 934). Accordingly, the Commission should accept the cost estimates of Petitioner.

11. McCook (TC04-049)

For Petitioner McCook, Mr. Bullock estimated total non-recurring costs to implement LNP (excluding transport) at \$88,103.00, and total recurring monthly costs of \$1,502.00. This calculates to a per-line cost per month, excluding transport, of \$1.66. (Bullock Ex. 2, Ex. R-TB-1).

The most significant differences between Mr. Bullock's calculations of LNP costs for McCook and those of Mr. Williams are in the "Switch Upgrade Costs" category (\$26,400.00 versus \$17,152.00); and in the "Other Internal Costs" category (\$41,316.00 versus \$15,000.00). As noted previously, Mr. Bullock's calculation of Other Internal Costs for each company is based upon the "number of man hours that we estimate would be required in order to analyze and fill out the forms that companies receive from wireless carriers as part of the arrangement that must be established between companies in order to facilitate porting." (Tr. 851). Mr. Williams' figure of \$15,000.00, by contrast, is a "more or less nonarithmetic mean" arbitrarily "picked" by Mr. Williams. (Tr. 934). With regard to the Switch Upgrade Costs, Mr. Bullock's estimate is based upon an investigation of "the pricing policies of the individual switch manufacturers" utilized by McCook, i.e. Nortel. (Tr. 849). Mr. Williams merely adopted the Switch Upgrade Costs provided in Exhibit 1 attached to McCook's original Petition, without further verification. (Tr. 934). The balance of the cost differences, which are insignificant in amount, are the same as re-

flected in the preceding analyses. Petitioner's cost estimates are legitimate and clearly supported by the evidence.

12. Sioux Valley (TC04-044)

Mr. Bullock's calculation of the total non-recurring costs to implement LNP in Petitioner Sioux Valley's service areas is \$103,671.00, excluding transport. (Bullock Ex. 2, Ex. R-TB-1), while the total recurring monthly costs is \$1,933.00. Mr. Williams' estimates did not vary significantly in any cost category. Mr. Bullock included \$1,000.00 as the cost for SOA non-recurring set-up charge (Mr. Williams estimated 0 (WWC Exhibit 15)). The amount included by Mr. Bullock is based upon the registration fee charged for "SOA Option B," as explained in Bullock Ex. 1, page 19), and is certainly a justifiable cost. (Tr. 835; 895-898).

13. Tri-County (TC04-084)

Costs of implementation of LNP, even excluding transport costs, are very significant for this company. Mr. Bullock's estimates show total non-recurring costs of \$40,354.00, and total recurring monthly costs of \$429.00. (Bullock Ex. 2, Ex. R-TB-1). This calculates to a cost per line per month, excluding transport, of \$3.03. Even this, however, does not paint the entire cost picture for Tri-County which would have to replace its outdated DMS-10 switches to implement LNP. According to Mr. Bullock, the \$10,640 in switch upgrade costs reflected in the cost exhibit does not include the cost to replace the switches. Therefore, the actual cost associated with LNP would be much greater than that set forth in the cost exhibit. (Tr. 912-913)

Further testimony by Mr. Bullock emphasized the potential impact on Tri-County if the company is required to provide LNP:

Q. (By Ms. Ailts Wiest) For Tri-County you stated they needed a new switch . . . . .

A. . . . . I wanted to provide [that information] here so the Commission

so the Commission would have an understanding that in at least one case the cost of implementing LNP can go far beyond the costs of providing LNP as defined by the FCC's regulations in terms of cost recovery through the end-user charge.

It's not our position that this huge switch replacement cost is eligible to be included in an LNP end-user charge, but if Tri-County does not receive a suspension of the LNP requirements and Tri-County proceeds to implement LNP, they have to replace their switches, and it will cost them a lot of money to do that. (Tr. 917)

Mr. Williams' disputes of Tri-County's cost data pale to mere shadows in comparison to the costs facing Tri-County should the Commission not continue a suspension of Tri-County's requirement to implement LNP. The costs as estimated by Mr. Bullock and attributable just to LNP costs are very high, but the costs not even included on Mr. Bullock's estimate and not recoverable through any type of surcharge would be devastating to this small company, with only 447 access lines.

14. Valley (TC04-050)

Mr. Bullock submitted a revised cost exhibit for Valley after the hearing, because he learned during Mr. Oleson's testimony that there was a third wireless carrier in Valley's service area. (Tr. 835). According to the revised exhibit, Valley's total non-recurring costs (excluding transport) to provide LNP would be \$69,844.00, and total recurring monthly costs would be \$797.00. (Bullock Exhibit 3). Mr. Williams had very few disputes with Mr. Bullock's figures, and in fact estimated SOA monthly charges and LNP Query costs per month higher than did Mr. Bullock. Valley's estimated costs to implement LNP were basically not contested by WWC. (See WWC Exhibit 15).

Companies Represented by Dan Davis

Mr. Dan Davis of Telec Consulting Resources presented cost testimony on behalf of Kennebec Telephone Company (TC04-025); Midstate Communications, Inc. (TC04-052); Beres-

ford Municipal Telephone Company (TC04-048); Western Telephone Company (TC04-053), and RC Communications, Inc. and Roberts County Telephone Cooperative Association (TC04-056). (Tr. 989). Mr. Davis' summary of the cost calculations for the companies he represented states:

Each unique individual RLEC estimate reflects the cost of local number portability as calculated for each company. If the RLECs are not responsible for transport costs, which we contend that they are not, the estimate - or the estimated costs for local number portability range from a per-line per-month cost of \$1.15 for Midstate Communications to \$4.56 per line per month for Western Telephone Company.

If for some reason the RLECs would be financially responsible for transporting calls using DS-1 direct connections, the estimated costs range from a low of \$3.04 per line per month for Midstate Communications to \$11.58 per line per month for Kennebec Telephone Company.

The estimates are organized between one-time nonrecurring costs to implement local number portability and monthly recurring local number portability costs. (Tr. 992).

The overall non-recurring costs of deploying LNP for the Petitioners (excluding transport) is not really a point of significant controversy between Petitioners and WWC. As shown by Mr. Davis, for the companies for which he prepared the cost estimates, the overall nonrecurring cost for LNP is approximately \$519,000. In comparison, the estimated costs prepared by Mr. Williams for Western Wireless was approximately \$469,000. (Tr. 993).

15. Beresford (TC04-048)

For Beresford, Mr. Davis estimated non-recurring costs (excluding transport) of \$55,905.00, and total recurring monthly costs of \$578.00. (Davis Ex. 2, Ex. R-1). This calculates to an LNP cost per line per month (excluding transport) of \$1.27, compared to WWC's estimate of \$1.22. (WWC Exhibit 18). The only significant difference between these figures is found in the "Other Internal Costs" category. This point has already been addressed in this Brief

previously, but Mr. Davis further clarified the justification for his estimated company-specific costs of negotiating porting agreements with cellular providers, intercarrier porting forms and trading partner profiles. In response to questioning about economies of scale if companies “went together” on negotiations, Mr. Davis noted that his cost estimates in this regard did take into account economies of scale. “Three days per contract I assumed was fairly efficient.” (Tr. 1007). Mr. Williams conceded that his across-the-board \$15,000.00 figure was not “developed from Beresford’s internal structure.” (Tr. 1022). Mr. Williams’ small downward adjustment to monthly recurring costs results in calculations of how long it would take Beresford to port a number. Mr. Davis’s estimate is based on low demand and less proficiency with the porting process by Beresford’s employee(s).

16. Kennebec (TC04-025)

This small company of less than 800 access lines is another one that would experience dramatic economic consequences if ordered to implement LNP. Mr. Davis estimated total non-recurring costs of \$98,569.00, and total recurring costs of \$381.00. This translates to a per line per month cost of \$3.45, excluding transport. (Davis Exhibit 2, Exhibit R-1).

WWC disputed the switching costs for Kennebec, but the evidence clearly supported inclusion of these costs. Kennebec would not purchase the switch upgrade except to implement LNP, and LNP could not be implemented without purchase of a generic software upgrade. WWC Exhibit 16 is a letter from a switch vendor to Kennebec setting forth switch upgrade costs. In response to cross-examination by WWC’s attorney, Mr. Davis clearly articulated the necessity of the switch upgrade costs included in his cost estimates. (Tr. 999-1000).

Mr. Williams did not dispute that the switch software generic may need to be upgraded to support LNP. Nor did he dispute that in order to implement LNP, Kennebec would have to ex-

pend \$47,979 to get their generics up to a level to support LNP software. (Tr. 1025). Accordingly, the evidence clearly supports the cost estimates presented by Mr. Davis on behalf of Kennebec.

17. Midstate (TC04-052)

Mr. Davis's estimate of non-recurring costs for LNP implementation for Midstate was \$113,394.00, and \$2,288.00 for recurring monthly costs. (Davis Exhibit 2, Exhibit R-1). Again, the most controversial issue was in the Switch Upgrade Costs category. Mr. Williams' \$25,000.00 switching cost was based upon the mistaken assumption that switch translation costs were included in the per-line cost quote from Nortel. (Tr. 1026-1028). Mr. Davis corrected that mistaken assumption on redirect:

- A. (by Mr. Davis) \$29,000.00 . . . . . is what Nortel would charge Midstate on a per-equipped-line basis for the LNP software.

There was an additional charge . . . . . for switch translations. . . . . Switch translations is a function that is separate and apart from the Nortel pricing on the per-equipped-line basis and that is actually a price that Martin Group would charge Midstate on a per-switch basis for switch translations. It's not part of that activation fee that is waived. (Tr. 1038-1039).

Mr. Davis then concluded that the correct amount for Midstate's switching cost is approximately \$65,000.00. Mr. Davis also provided justification for his estimated costs in the non-recurring "Other Internal Costs" category. (Tr. 1039-1040).

The evidence clearly supports Mr. Davis's cost calculations for Midstate, as clarified at the hearing.

18. Western (TC04-053)

Of all the Petitioners requesting suspension of the requirement to provide LNP, Western's per-line costs are among the highest. Mr. Davis estimated total non-recurring costs (ex-

cluding transport) of \$176,780.00, and recurring monthly costs of \$419.00. (Davis Ex. 2, Ex. R-1). This calculates to a per-line per-month LNP cost, excluding transport, of \$3.97.

Western's situation is similar to that of Kennebec. Mr. Davis testified that "in order (for Western) to have the LNP functionality, they'd have to upgrade their switch." (Tr. 1005). The costs of the switch upgrade came from Western's engineering consultant. (Tr. 1005). While Mr. Williams included only \$45,987.00 for switch upgrade costs, he conceded that it would cost Western \$145,987.00 in switch upgrades to be LNP capable.

Q. You're not contending that they could provide LNP to their customers if ordered to do so by this Commission for \$45,987.00, are you?

A. No. Western's situation is similar to the Kennebec situation that we discussed . . . . I would not disagree that they would need to get their switch generics upgraded to support LNP implementation.

Q. And that would be a cost to Western Telephone Company; is that correct?

A. That's correct. (Tr. 1028)

Based on this undisputed and overwhelming cost evidence, Western Telephone Company's request for suspension of implementation of LNP should be granted.

#### 19. Roberts County/RC Communications (TC04-056)

Mr. Davis estimated non-recurring costs for LNP for Roberts County/RC at \$74,199.00, and recurring monthly costs at \$880.00, excluding transport. (Davis Ex. 2, Ex. R-1). This calculates to an LNP cost per line per month (excluding transport) of \$1.23. WWC's per line per month LNP cost for Roberts County/RC is \$1.05, which indicates very little difference between the parties' cost estimates. The most significant dispute is in the "Other Internal Costs" category. (Davis at \$22,319.00, Williams at \$15,000.00), and that difference has been discussed at

length above. All other costs are nearly identical. Accordingly, this Commission should accept Petitioner's cost estimates for Roberts County/RC as presented by Mr. Davis.

**B.**

PETITIONERS HAVE DEMONSTRATED THAT A SUSPENSION OR MODIFICATION OF THE LNP REQUIREMENT IS NECESSARY "TO AVOID IMPOSING A REQUIREMENT THAT IS UNDULY ECONOMICALLY BURDENSOME."

As shown, LNP implementation would result in the assessment of a new LNP surcharge on end users and could increase local rates. These actions would make Petitioners' service offerings less competitive with the services provided by wireless and other competitive carriers. In addition, if the total cost of LNP is assigned to Petitioners' subscribers through a surcharge and local rate increases, some segment of their subscribers may discontinue service or decrease the number of lines to which they subscribe. The resulting reduction in line count would increase further the per-subscriber cost of LNP, which, in turn, could lead to more rate increases followed by additional losses in lines. Ultimately, Petitioners may not be able to recover the costs of LNP from their subscribers, which would reduce the Petitioners' operating cash flow and profit margins.

It also is unduly economically burdensome to require Petitioners to implement LNP when a number of implementation issues are not resolved. It would be more efficient and less costly to implement LNP only once, after the LNP parameters are more certain, rather than require carriers to implement LNP when important issues are unresolved (such as whether a trunk connection will be required), or could be changed (such as whether the porting interval will be reduced).

Wireline to wireless porting under current routing protocols also would impose an unduly economically burdensome requirement by making the network less efficient and by confusing consumers which could result in reduced calling. If direct connections are not established, calls

to ported numbers will be routed to an interexchange carrier and the calling customer will incur a toll charge. The local exchange network also will be less efficient as a result of porting because end users who continue to dial a ported number on a seven-digit basis will likely receive a message that the call cannot be completed as dialed, or a message instructing the party to redial using 1+ the area code. Thus, callers would have to dial twice, with the resulting network use, to place one call.

### C.

#### PETITIONERS HAVE DEMONSTRATED THAT THE RESOLUTION OF OUTSTANDING ISSUES COULD INCREASE THE COST OF LNP.

In addition to the known costs of LNP, the Petitioners also presented evidence that there are a number of outstanding issues that could make the adverse economic impact of LNP on users of telecommunications services even greater and could make LNP even more unduly economically burdensome. For example, an industry advisory group recently recommended that the FCC reduce the porting interval to 2 days, and in a pending rulemaking proceeding the FCC is examining whether the current four-day porting interval for wireline carriers should be shortened, perhaps to match the wireless porting interval of 2.5 hours. A shorter porting interval will significantly increase the cost of LNP because more systems would have to be automated and more personnel would have to be hired to take and implement porting requests. (Davis Ex. 1 pp. 18, 19; ITC Ex. 3 p. 18; Brookings Ex. 3 pp. 18, 19; Stockholm Ex. 3 p. 19; Venture Ex. 3 pp. 18, 19; West River Ex. 3 p. 18; SDTA Ex. 1 pp. 15, 36; Tr. pp. 897, 898).

The Petitioners' cost exhibits also do not include the cost of implementing wireless to wireline porting, which is under consideration by the FCC. In this regard, the FCC has asked for comment on whether wireline carriers should be required to absorb the cost of providing a customer with a ported wireless number with the same local calling area as the customer received

from the wireless carrier and whether LECs should be required to provide LNP through foreign exchange (FX) and virtual FX service.<sup>5</sup> These proposals also would increase the cost of LNP, however, it is not clear to what extent.

Changes to the LNP requirements that would impose new LNP costs after Petitioners are required to implement LNP also will impose a requirement that is “unduly economically burdensome” because it is very likely that Petitioners would be unable to recover these costs. Under the current FCC rules pertaining to the establishment of a “monthly number-portability charge” the charge is to be “levelized” over five years, or in other words must remain constant over that period. There are no provisions in the FCC rule relating to LNP cost recovery (47 C.F.R. § 52.33) that permit revision to the established monthly number portability charge, should actual LNP related costs change over the 5 year period that the charge is to be in effect. Accordingly, the only means through which a revision to the charge can be obtained is to seek a waiver of the LNP cost recovery rule from the FCC, pursuant to the FCC’s general waiver authority found in 47 C.F.R. § 1.3. Under this rule provision, a waiver can only be obtained based on a showing of “good cause” and it requires a separate petition and a separate FCC process, outside of the FCC’s tariff filing procedures. With respect to obtaining waivers of the established LNP cost recovery rule provisions, the FCC recently commented on the issue in a decision addressing a request for declaratory ruling and/or waiver filed by BellSouth Corporation.<sup>6</sup> In that case, the BellSouth was granted a waiver to increase its end-user LNP charge, so that it could include in such charge the additional costs of implementing “intermodal” LNP. In granting this waiver, however, the FCC

---

<sup>5</sup> It is not clear what “virtual FX” service would entail as the FCC did not define it and the Petitioners offer no such service.

<sup>6</sup> In the Matter of Telephone Number Portability, BellSouth Corporation Petition for Declaratory Ruling and/or Waiver, CC Docket No. 95-116, *Order*, FCC 04-91, released April 13, 2004.

signaled that it was not likely in the future that it would view such requests in a favorable manner. In its decision, the FCC stated:

. . . we expect that carriers implementing LNP in the future will include intermodal capability and there will be no need for staggered end-user charges. Thus, any incumbent LECs that have not filed tariffs for LNP cost recovery as of the release date of this order must comply with the five-year rule. In other words, once they have implemented number portability, these carriers should include the initial implementation costs of both wireline and intermodal LNP costs in any future tariff filing and recover costs over five years. Further, carriers who already have included intermodal costs in filed tariffs will not be eligible for additional recovery under a separate intermodal charge. . . .

In the Cost Recovery Order, the Commission discouraged carriers from attempting to raise their end-user charge. *Emphasis added.*

#### D.

#### THE UNRESOLVED ISSUE OF TRANSPORT RESPONSIBILITY FURTHER SUPPORTS MODIFICATION AND /OR SUSPENSION

The matter of transport responsibility is perhaps the most insidious aspect of LNP implementation before the Commission. The FCC's *November 10 Order* indicates that LNP implementation does not depend on the FCC's long-delayed resolution of this issue, but in a real-world sense, it is difficult to ignore when examining LNP costs.

The Petitioners' submit that the possible imposition of transport responsibility on them does nothing but further support their suspension and/or modification requests. It drives up costs, both to customers and/or the companies themselves (an issue left hanging by the FCC) and threatens to unravel an intercarrier compensation mechanism that has helped rural South Dakota to the forefront of modern telecommunications facilities and service.

Petitioners are confident that as this Commission considers the transport issue it will conclude as the Nebraska Commission recently has, that indirect connections are technically infeasible.

ble presently, and that the resulting costs “...would either be an additional significant adverse economic impact on end users or would be an economic burden on the local exchange carriers...” *Nebraska Order* at 7, 10-11.

The Petitioners’ cost exhibits contain estimates for the recurring and non-recurring cost of transport, which essentially is the cost of installing facilities to enable calls to ported numbers to be routed as local calls. It is undisputed that under current network configurations, a call originating on one of the Petitioner’s networks and terminating to a wireless carrier’s customer is routed to an interexchange carrier and is billed to the originating customer as a toll call, unless the wireless carrier has a direct connection with the Petitioner or it is part of an extended area service arrangement. It also is undisputed that there are very few direct connections between the Petitioners and the wireless carriers operating in their service areas, including Western Wireless. Thus, if no new transport facilities are installed, in many cases the only facilities currently available to route a call to a number ported to a wireless carrier will be interexchange facilities.

Further, Petitioners contend that they have no legal obligation to transport traffic to points beyond their service territories, whether the traffic is associated with a ported number or not. Under the provisions of 47 U.S.C. §251(c)(2)(B), incumbent LECs are required to provide interconnection only at a “technically feasible point within the carrier’s network.”

Western Wireless contends that, pursuant to the FCC’s *November 10 Order*, Petitioners have an obligation to transport traffic to a number ported to a wireless carrier as a local call even if the wireless carrier’s point of interconnection is located outside of a particular Petitioner’s service territory. In essence, Western Wireless argues that the FCC’s Order established a new routing obligation on rural incumbent LECs in connection with traffic to ported numbers.

---

<sup>7</sup> *Id.* at pars. 16 and 17.

Western Wireless' argument clearly fails by the plain language of the *November 10 Order*. In its Order, the FCC acknowledged that LNP raised certain routing issues for rural carriers where no direct connection exists. The FCC, however, specifically found that these issues did not need to be resolved in the LNP proceeding. Rather, the FCC indicated that they would be addressed in a pending Petition for Declaratory Ruling filed by Sprint Corporation.<sup>8</sup> Therefore, it is clear that the question of whether Petitioners have an obligation to transport traffic to a wireless carrier as a local call, even if the wireless carrier's point of interconnection is located outside of a particular Petitioner's service territory, including traffic to a ported number, is pending at the FCC.

In addition, there is no language in the FCC's Order directing rural LECs to install new facilities to transport local calls. Rather, the FCC seems to assume, incorrectly, that existing facilities are sufficient. As testified to by Mr. Watkins:

the Nov. 10<sup>th</sup> Order does not automatically create service arrangements between the Petitioners and wireless carriers . . . [and further] does not clearly answer questions about the manner in which calls to ported numbers of mobile users will be treated from a service definition basis, how such calls will be transported to locations beyond the ILECs' service territories, and over what facilities these calls will be routed. (SDTA Ex. 1 p. 16).

Mr. Watkins further explained:

No LEC, including the Petitioners, has network arrangements for the delivery of local exchange service calls to, and the exchange of telecommunications with, carriers that operate at distant locations beyond the LEC's actual service area in which local exchange service calls originate, and there is no requirement for LECs to establish such extraordinary arrangements. LECs have no obligation to provide at the request of a wireless carrier, at additional costs and expense to the LEC, some extraordinary form of local exchange service calling beyond that which the LEC provides for any other local exchange service call." (*Id.*, p. 17).

---

<sup>8</sup> In the Matter of Sprint Corp. Petition for Declaratory Ruling Regarding the Routing and Rating of traffic by ILECs, CC-Docket 01-92, Petition of Sprint, May 9, 2002 (*Sprint Petition*).

The *Nov. 10<sup>th</sup> Order* neglects to address specific operational and network characteristics of the smaller LECs such as the Petitioners. . . . What the FCC fails to understand . . . is that calls routed outside of the Petitioners' local exchanges are routed to interexchange carriers (IXCs). Therefore they are routed and billed correctly as interexchange calls. The Petitioners do not have any obligation to provision local exchange carrier services that involve transport responsibility or network functions beyond their incumbent LEC service areas. . . . Furthermore, it is well settled that LECs interconnection obligations only pertain to their own networks, not to carriers' networks or to networks in areas beyond their own RLEC service areas. While the FCC has generally acknowledged a limitation on a Bell company to route calls no further than to a LATA boundary, the FCC's 10<sup>th</sup> Order apparently failed also to recognize that the Petitioners are physically and technically limited to transporting traffic to points of interconnection on their existing network that are no further than their existing service territory boundaries. . . . [T]elecommunications services provided to end users that involve transport responsibility to interconnection points with other carriers' networks at points beyond Petitioner's limited service area and network are generally provided by IXCs, not by the Petitioner LECs. (Tr. pp. 17, 18).<sup>9</sup>

Thus, it is clear that the arrangements necessary to route calls to ported numbers as local calls are not in place currently. Further, the record shows that there are a number of options that could be considered to address this issue. The methods contained in the record are briefly outlined below.

#### Petitioners' Methodologies

Based on the existing network configuration for the wireless carriers, the Petitioners (represented by cost consultant John De Witte) assumed a dedicated facility from each of Petitioners' rate centers to each wireless carrier, where the wireless carrier does not have a point of interconnection or numbers in the LEC's rate centers. This method is driven by the fact that to enable

---

<sup>9</sup> Dan Davis, a witness for numerous Petitioners, in addressing the transport issues, expressed similar concerns, noting that "RLECs do not route local traffic to a point of interconnection outside of its local exchange or service area. Requiring RLECs to route traffic to a point of interconnection outside of its exchange or service area would

intermodal LNP on a level playing field (wireline to wireless and wireless to wireline), without separate transiting agreements in place, each CMRS carrier must obtain an NPA-NXX in each wireline rate center to accommodate proper rating and routing of calls. Thus, the cost exhibits for these Petitioners shows the estimated recurring and non-recurring cost of providing a DS-1 for Type 2B interconnection from each of Petitioners' rate centers to each of the wireless carriers. The record indicates that this methodology is, in fact, the current configuration used by the Parties. Thus, currently, calls to wireless carriers are routed as local calls when the wireless carrier establishes and pays for a direct connection to the Petitioner's switch. This configuration complies with the Interconnection Agreements recently entered into between Petitioners and Western Wireless. The transport facility pricing was based on firm, market-driven pricing from SDN Communications (SDN) for DS-1 circuits. Further, the record establishes that this configuration will work and will require no additional negotiated interconnection, transport or transiting agreements between the parties.

The methodology utilized by Mr. Davis and Mr. Bullock is similar in principle to that proposed by Mr. De Witte, however the actual implementation is slightly different. Messrs. Davis and Bullock calculated transport costs using a DS-1 direct connection from each host office location and from each stand-alone end office switch location to each wireless provider's point of interconnection. The traffic that originates from a remote switch was assumed to be transported on the same DS-1 as used by its host switch. The point of interconnection was assumed to be located at the nearest rate center in which a tandem was located. The calls to the ported numbers would then be carried over these DS-1s to a POI located within a Petitioner's service area or exchange, and the Petitioner would then connect with the wireless provider, who

---

add the responsibility of a LEC from providing local exchange service and exchange access to providing interexchange service as well." (Tr. p. 994).

would then transport the calls back to its switch. For the group of companies represented by Mr. Davis, the assumption was made that there were only two wireless carriers. For Mr. Bullock's companies, the estimated number of wireless carriers varied from company to company.

This routing arrangement also is consistent with the Interconnection Agreements entered into between Western Wireless and the Petitioners. The cost is reliable because it is based on tariffed rates for T-1 circuits. Further, this configuration will work and it will allow the porting of numbers from wireless carriers to the Petitioners.

The transport costs estimated by Petitioners range from approximately \$0.20 to \$30.00 per line per month. Most of the Petitioners would see a per line increase of more than \$1.00 per month solely related to transport. Accordingly, it is clear that this issue could have a tremendous adverse impact on end-users and Petitioners.

#### Western Wireless' Methodology

Western Wireless criticized the transport proposals presented by Petitioners as inefficient. In the alternative, Western Wireless states that Petitioners should route calls to ported numbers to the Qwest tandem and, that Petitioners should pay for the network facilities and per call charges associated with this option. Although he admitted that this routing could require the Petitioners to route traffic outside their local exchange boundary or certificated area (Tr. p. 576), Mr. Williams stated that "local companies, since they are the originating carrier of a call to a ported number, do have an obligation to route that traffic to the designated routing location within the LATA." (Tr. p. 576). He was unwilling to accept that there should be any exceptions from such obligation, even for a company like Kennebec whose service area is located approximately 180 miles from the Qwest tandem in Sioux Falls. (Tr. pp. 576, 577).<sup>10</sup>

---

<sup>10</sup> It would appear that Western Wireless' transport proposal, given the company's insistence on imposing the transport costs on Petitioners, is contrary to existing FCC and court decisions. The FCC and the courts have stated that

There are a number of problems with the Western Wireless proposal. First, Western Wireless assumed that existing one-way facilities with Qwest could be converted to two-way facilities; that Qwest would agree to convert the facilities at a specified cost; and that Qwest would charge a specified cost for transiting traffic. However, Qwest is not a party to this proceeding and there is no evidence that it would agree to these terms.

Second, Western Wireless completely ignores the numerous regulatory, policy and business issues that would arise with a “Qwest tandem” option as well as the very real impacts that landline LECs will experience if the transport issues are not resolved in a fair manner. Some of these issues were summarized by Mr. Bullock during the hearing when he described the advantages of not using a tandem option as follows:

The first one is if you don't go through a tandem switch, whether it's Qwest or SDN or somebody else, you're eliminating a potential point of failure. If you direct connect – if you connect directly to the wireless carrier's switch, you're going to establish an operationally more reliable connection. (Tr. 857-858)

Mr. Bullock further stated that:

circuits that come into the ILEC network – I should say trunk links that are established to the ILEC network directly from the individual wireless carriers can be more easily monitored for call detail and billing purposes. Whether you're billing one way or the other way, you know who your trunk link is connected to, as opposed to going through a tandem there's a possibility that you might lose

---

a LEC is free to treat as interexchange service any call to a point of interconnection that is beyond the local calling area of the originating LEC end user. *See e.g. Memorandum Opinion and Order, In the Matter of TSR Wireless, L.L.C., et al. v. US West Communications, Inc. et al.*, released June 21, 2000, in File Nos. E-98-13, E-98-15, E-98-16, E-98-17, E-98-18 at para. 31, affirmed *Qwest Corporation vs. FCC*, 252 F. 3<sup>rd</sup> 462 (D.C. Cir. 2001); See also *Mountain Communications, Inc. v. Qwest Communications, FCC 02-220, Order on Review*, July 25, 2002, para. 6, vacated in part and remanded, *Mountain Communications v. FCC*, 355 F. 3<sup>rd</sup> 644, 647 (D.C. Cir. 2004) wherein the Court of Appeals recognized that LECs may treat as toll calls any call to a mobile user that must be delivered to an interconnection point beyond the normal local calling area.

Toll calls are transported by interexchange carriers, toll calls are interexchange service. Petitioners, as rural LECs, hand off toll calls to competing interexchange carriers consistent with the equal access requirements. There is no requirement for a LEC to deliver local exchange service calls to some distant point or to the “terminating carrier's switch” when that switch is beyond the local calling area and beyond the point that a LEC transports any other local exchange service call.

some information that reveals the identity of where the traffic is coming from. (Tr. 857-858).

Third, contrary to the perception that Western Wireless wants to create, the transport issue is not a simple one and depending on how it is resolved the financial impact on rural LEC operations could be very substantial. Randy Houdek, general manager of Venture Communications Cooperative, offered considerable testimony concerning the transport issues and how they may affect his cooperative. He indicated that the transport issue is a “huge” issue for Venture, and explained that Western Wireless’ proposal for transport would not only make his company responsible for the costs of transport to the Qwest access tandem, but that it would also, by allowing for a bypass of the existing toll network, affect his company’s access and toll revenues. (Tr. pp. 385, 391, 425, 399, 400, 405, 406, 413, 414, 422). This would be in addition to the increase in Venture’s local service rates caused by the direct costs of LNP. According to Mr. Houdek, “the downstream effects of what it will do to access, what it will do to my toll revenues, the impact it will have on my local service it will be in excess of \$3 million.” (Tr. pp. 424). If rural carriers, with their limited service areas, are ultimately forced to bear the burden of transporting landline calls to ported wireless numbers to a serving LATA tandem and are forced to exchange these calls with Western Wireless and all other wireless carriers as local calls, the impacts will be “huge” for all of the Petitioners. (Tr. pp. 204, 478).

The testimony of John DeWitte, on behalf of a number of the Petitioners, confirms that many items must be considered in addressing the transport issues. In referencing the Western Wireless proposal, he noted that utilizing the existing Qwest facilities for traffic destined to ported numbers is not that “simple.” Rather, “an extremely complex analysis . . . would have to be done to determine whether it’s even a viable solution.” (Tr. 266, 267). As part of that analysis, the fact that incumbent LECs are not obligated to transport outside of their service area

would have to be taken into account. (Tr. pp. 269, 279, 269) And also, impacts on “settlements” or separations, toll revenues, other revenues, and toll billing practices would have to be considered. (Tr. pp. 266, 272-274, 482).

Western Wireless attempts to downplay the impacts of its transport proposal, but it would have far reaching impacts on all landline LECs. Not only would there be additional direct costs associated with LNP implementation, there also would be impacts on other LEC revenues. If the traffic to ported numbers is considered local the LEC minutes flowing through the separations process utilized to establish federal and state access rates will be affected. There would be a resulting increase in local traffic and this increase would translate into a greater shift of cost recovery to the intrastate jurisdictions. This in turn would require higher local exchange service rates and/or intrastate access rates. In addition, if the traffic is considered local and not subject to access charges, customers would be encouraged to bypass to an even greater extent the current landline toll network. This increased bypass would lead to fewer access minutes and higher intrastate access charges. The business of landline toll carriers competing also would be impacted. If landline to landline calls moving from one landline local calling area to another landline are considered toll, but landline to wireless calls are not, landline long distance companies are tremendously disadvantaged. There undoubtedly would be a negative impact on landline carriers’ toll revenues.

Western Wireless suggested at the hearing that the impact of its transport proposal would be small because of the small number of expected calls to ported numbers. However, while the number of calls to ported numbers (served by wireless carriers) is expected to be small given the lack of demand for intermodal LNP, this is a fraction of the total traffic that is at stake. Thus, any decision imposing transport responsibilities on rural LECs beyond their existing network

would impact all traffic—including calls to wireless users who do not have a ported number, calls to CLECs, and calls to Qwest customers. Mr. Bullock commented on this particular concern in his testimony. He stated:

I think it is particularly important, at this time [and] I think it's safe to say that nobody can predict the volume of traffic that we're going to see between wireless carriers and rural ILECs. We were talking about the example here of LNP generated traffic. It's quite conceivable that there could be more. If we use this thing as kind of a precedent, there's no telling what could happen. And so assuming that the only traffic that we're talking about that might be [exchanged] between wireless and wireline carriers on a local basis where there's no interexchange carrier, assuming that that level of traffic is going to only the level of traffic attributable to delivering calls to ported numbers is a faulty assumption. *Emphasis added.* (Tr. pp. 857, 858).<sup>11</sup>

#### Other Methodologies

A number of other transport options also were discussed at the hearing. For example, Western Wireless is negotiating settlement agreements with James Valley and CRST in which Western Wireless will pay most, if not all, of the cost of new transport facilities and the LECs will not be required to transport calls to ported numbers beyond their service territory. Also on record there was some discussion as to whether SDN could be a tandem provider for traffic to ported numbers instead of Qwest. This proposal suffers from some of the same problems as the Qwest proposal, however, in that SDN is not a party to this proceeding; it is not known if SDN would be interested in acting as a tandem provider; and it is not known what rate SDN would charge.

---

<sup>11</sup> As indicated by the testimony of Mr. Watkins, Petitioners believe that Western Wireless in these LNP proceedings may be primarily interested in burdening the rural LECs with “extraordinary and unfair transport obligations . . . beyond those that actually apply.” (SDTA Ex. 2 p. 4). “It appears even that the wireless carriers’ interest in these issues may have more to do with transferring that responsibility of transporting local calls beyond the small and

## Study Group Proposal

At the hearing, the Commission asked the parties if they would participate in a study group to examine the transport issue and possible alternatives. Given the complexity of the issue; the number of possible options; and the huge potential impact of the issue, Petitioners agree that a study group would be an appropriate mechanism to consider this issue. Accordingly, Petitioners urge the Commission to grant Petitioners a suspension of LNP until a study group can be convened and its findings on the transport issue reviewed.

E.

### GRANT OF THE REQUESTED SUSPENSIONS/MODIFICATIONS IS CONSISTENT WITH THE PUBLIC INTEREST, CONVENIENCE AND NECESSITY

In addition to meeting at least one of the criteria listed in 47 U.S.C. § 251(f)(2)(A) relating to adverse economic impacts or technical infeasibility, in order for any request for LNP suspension and/or modification to be granted, it must be “consistent with the public interest, convenience and necessity.” 47 U.S.C. § 251(f)(2)(B). As testified to by Petitioners’ and SDTA’s witness, Steven E. Watkins, a determination of the public interest inherently involves a cost/benefit analysis. The determination of the public interest “should involve an evaluation of the cost of LNP implementation and operation compared to the benefits that LNP implementation would present for consumers.” (SDTA Ex. 1 p. 8, Tr. pp. 497-505).<sup>12</sup>

Petitioners believe that the evidence presented in this matter leaves no doubt that the public interest will be served by granting the requested LNP suspensions. Fundamental to any analysis of LNP benefit is an assessment of demand for the service. It is clear from the record in

---

rural LECs’ service areas, more to do with that than LNP.” (Tr. p. 501; See also Mr. Houdek testimony, Tr. pp. 405, 406).

<sup>12</sup> It appears that the necessity to weigh cost vs. benefit as part of the public interest analysis is not challenged by Western Wireless. Mr. Williams expressly referenced in his testimony that the public interest standard is about

this matter that there is little, if any, demand for intermodal LNP from Petitioners' end-user subscribers. In addition, in evaluating the costs of LNP, it is strikingly apparent from the record that there are a number of substantial issues related to the provisioning of LNP that have not yet been resolved by the FCC and that the resolution of these issues will impact LNP implementation costs. Given these unresolved issues, the Commission cannot quantify at this time the total costs of LNP implementation nor, in turn, either reasonably or reliably fully evaluate end-user and/or rural carrier impacts.

Under these circumstances, given the almost complete lack of demand for intermodal LNP in the Petitioners' service areas, and taking into account the significant unresolved issues relating to LNP that will affect LNP implementation costs, Petitioners believe there is no other justifiable result than to grant the LNP suspension petitions. As testified to by Mr. Watkins, "the Commission should extend the current interim suspension of the LNP requirements for the Petitioners until the conditions confronting the Petitioners . . . have changed such that the per-line cost of LNP is more reasonable compared to whatever demand, if any, may exist. . . [And] any consideration under the criteria of Section 251(b)(2) cannot occur until after the issues pending before the Courts and the FCC related to the apparent directives contained in the FCC's November 10, 2003 Order on LNP (*November 10 Order*) are fully resolved, including any further and final disposition of the remaining rulemaking issues and the resolution of the routing issues that the FCC explicitly has left to be resolved later." (SDTA Ex. 1, p. 6).

There is overwhelming evidence in the record to support an affirmative public interest finding with respect to each of the LNP suspension petitions. A finding that the suspensions are in the public interest is supported by the following:

---

"cost" and "benefit" and that it's also about "from a company perspective, revenue and financial wherewithal." (Tr. 562).

## 1. THERE IS A LACK OF CONSUMER DEMAND FOR LNP

Central to the evaluation of whether consumers will benefit from the implementation of LNP is the level of demand for LNP in Petitioners' service areas. (SDTA Ex. 1 p. 10). Regarding demand for LNP, substantial evidence was presented by Petitioners' witnesses that shows that demand for the service is almost non-existent. Mr. Watkins supplied evidence regarding the demand for intermodal number portability in those areas where intermodal LNP has already been implemented, and indicated that there appears to be very little demand from wireline customers to port their numbers to wireless carriers. According to Mr. Watkins, "the vast majority of wireless ports appear to be from one wireless carrier to another. . . . the demand for wireline-to-wireless porting for the non-rural, large local exchange carriers has been small." (SDTA Ex. 1 p. 10). Mr. Watkins presented information from recent FCC press releases, "Communications Daily" and from various other telecommunications industry publications supporting the conclusion that, at the present time, end-user customers do not have much interest in porting their wireline number to a wireless phone. He noted that this lack of interest in wireline-to-wireless porting is probably due to the fact that wireline and wireless services are viewed more as "complementary" and not "substitute" or "replacement" type services. (SDTA Ex. 1 pp. 12-15). He also explained that the interest in rural areas for wireline-to-wireless porting is likely to be even less than in the more urban, top 100 MSAs, because of the fact that wireless service is "less ubiquitous in rural areas, and landline users would be more reluctant to abandon dependable wireline service for a wireless service of less certainty." (SDTA Ex. 1 p. 11; Tr. 499, 500).

The testimony provided by the Petitioners' general managers confirms that there is no demand for LNP. (Tr. 43, 294, 344, 360, 414, 429, 446, 770-772, 806, 814, 822, 825, 949, 957, 969, 982, 1044, 1045; Santel Ex. 1, p. 3). Among the general managers testifying, only three,

Jerry Heiberger, James Adkins, and Steve Oleson, indicated that their company had received a customer inquiry and/or request regarding LNP as a service. Mr. Heiberger and Mr. Oleson indicated that their company had received only one inquiry and/or request, and Mr. Adkins indicated that Brookings Municipal Telephone had, to date, received only two requests or inquiries. (Tr. 43, 106, 294, and 748). Rod Bowar, testifying as general manager for Kennebec Telephone Company, presented more specific information on the issue of consumer demand for LNP, noting that his company had conducted a survey of its local exchange service subscribers. (Tr. 949). He referenced that survey and indicated that the results overwhelmingly indicate that a majority of customers in his service area “do not want to pay for LNP at any price.” He indicated that his survey showed that 73 percent of the survey respondents had a wireless phone, but only 2.6% of the total survey respondents would be willing to pay a surcharge of \$2.00 for the LNP service. (Tr. 957). If the LNP surcharge were established at \$3.00, only 1.6% of the responding customers indicated they would want the service. (Kennebec Ex. 1 p. 3). He further noted that the age of Kennebec’s subscribers is older than the nationwide average, that the average income is lower than the nationwide average and that requiring LNP “would make . . . older customers on fixed incomes pay for a service that they will not use and are not requesting.” According to Mr. Bowar, the “[b]ottom line [is], LNP implementation would have an extreme adverse impact with little or no benefit.” (Tr. 949).

On the other hand, Midcontinent did not present any evidence concerning demand for wireline LNP and Western Wireless’ witness, Ron Williams, did not present any empirical data indicating that there is any present demand for the deployment of intermodal LNP in the rural service areas in South Dakota. Western Wireless introduced a document captioned “Survey of Rural Consumers- Western Wireless Markets,” but that exhibit includes no information specific

to the demand for LNP. (Western Wireless Ex. 11). For instance, although information is presented as to the number of consumers within the surveyed group that would be willing to substitute their landline service with wireless service, there is nothing in the document bearing upon LNP. (Tr. 645). The document is also based on a survey of 1,000 customers throughout Western Wireless' service area covering 19 states but is not specific to the Petitioners' rural service areas. (Tr. 545). Western Wireless also submitted its Exhibit No. 13, a "2004 Rural Youth Telecommunications Survey" conducted by the National Telecommunications Cooperative Association (NTCA) and the Foundation for Rural Service. (Tr. 691). This document is similarly deficient. It is a nationwide survey and, as admitted by Mr. Williams, is not specific to LNP. It speaks merely to general technology concerns of rural telephone companies as those concerns relate to the youth market. (Tr. 730).

As part of its evaluation of Petitioners' LNP costs, in particular recurring costs, Western Wireless included certain port projections. The record shows, however, that these port projections are purely speculative and that they are not relevant to actually determining what level of demand (if any) exists for the LNP service. Mr. Williams indicated that the port volumes used by Western Wireless were developed internally by the company -- that they were based on internal "forecasts" or "projections" (Tr. 606, 608, 644, 645, 690, 691, 929, 1023). He indicated that they are only "estimates," and explained that the port volume numbers were arrived at by taking an "estimate based on Western's belief of the volume of port activity it would see from these companies, and then [by dividing] . . . that number by what we believe our market share to be to get a total intermodal porting estimate." (Tr. 1023, 1024).<sup>13</sup>

---

<sup>13</sup> In regard to these port projections, Mr. Williams testified that most of them come in around a "3 percent per year range which is similar to the . . . line loss experience that we've seen in competitive markets when LNP has been implemented on a wireline to wireline basis." (Tr. 645). Further, with respect to the Faith Municipal Telephone Company, the cost exhibit and related testimony provided by Mr. Williams projects, as previously discussed, the

The evidence presented thus clearly establishes a lack of demand in rural areas for LNP. Accordingly, and as SDTA witness Watkins testified, there is “no policy balance between the substantial costs that would be imposed on the public and the potential benefits of LNP in the rural areas of South Dakota.” (SDTA Ex. 1, p. 6). Further, “the cost to implement LNP in the rural exchanges of the Petitioners is significant and would lead to explicit surcharges and other potential rate increases to the rural users beyond that which would be balanced with any benefit to be derived by the small number, if any, of users that may actually seek to port their wireline service telephone numbers. Accordingly, suspension of the LNP requirements would avoid these burdens consistent with the public interest, convenience, and necessity.” (*Id.*, p. 5).

**2. GIVEN THE LACK OF CONSUMER DEMAND, RURAL LEC RESOURCES SHOULD NOT BE DIVERTED TO LNP IMPLEMENTATION.**

As expressed by Mr. Watkins, “it is not in the public interest for society, and particularly the rural subscribers of Petitioners, to incur the cost of implementing LNP and to divert the limited resources of Petitioners which are already challenged by their service to sparsely populated areas and relatively lower income customers, for such small, if any, demand and such a speculative and abstract objective.” (SDTA Ex. 1, p. 15). Many general managers expressed similar concerns. Specifically, they indicated opposition to being forced to commit human resources and company dollars towards LNP, and away from other company projects, such as the continued deployment of broadband services. (Tr. 349, 357, 360, 1098, 1099, 1107, 1108, 1109, 1111). This concern arises from their understanding that there is little customer interest in LNP, but significant interest in broadband services.

---

number of ports for the company (over the next five years) at zero. This information presented by Western Wireless provides further evidence supporting Petitioners’ claims that there is little, if any, current demand for the LNP service by consumers.

Testimony also was provided concerning the demographics of the rural service areas of Petitioners. In general, the Petitioners provide service to an aging population and, in many cases, to consumers falling on the lower end of the income scale. Because of the older than average age of consumers in the rural areas, many of the consumers are on fixed incomes. (Kennebec Ex. 1 p. 5; Tr.. 1110, 1111).

It is important to keep these demographics in mind in reviewing LNP implementation under the public interest standard. As indicated by Gene Kroell, Santel's general manager, customers in his area are concerned about additional surcharges on their telephone bills. He indicated that his company had received hundreds of telephone calls from these customers when the "end user charge was raised to \$6.50 about a year ago."<sup>14</sup> He also indicated that the population of Sanborn County is ranked fourth in the state on the poverty scale and that Hanson County is ranked third. (Tr.. 1111). Further, he pointed out that Hutchinson County, served by Santel, has more people per capita that are 85 years and older than any other county in the State. (Tr.. 1111).

These demographics indicate that subscribers will have a difficult time paying higher telephone bills and, consequently, it is essential that this Commission recognize the present lack of demand for LNP. All of the Petitioners are rural LECs and all of them face similar challenges in providing state-of-the-art, affordable telecommunications services throughout their service areas. Substantial evidence was presented indicating that broadband services such as DSL are of much greater importance to end-users in the Petitioners' rural service areas than intermodal LNP. (Tr.. 349, 357, 360, 1098, 1099, 1107, 1108, 1109, 1111; Santel Ex. 1, p. 3). All of the Petition-

---

<sup>14</sup> This reference relates to the increase in the "subscriber line charge" (SLC) from \$6.00 to \$6.50 on July 1, 2003, pursuant to the FCC's *Second Report and Order and Further Notice of Proposed Rulemaking in CC Docket No. 00-256*, In the Matter of the Multi-Association Group (MAG) Plan for Regulation of Interstate Services of Non-Price Cap Incumbent Local Exchange Carriers and Interexchange Carriers.

ers are involved in upgrade plans to expand broadband availability within their service areas and very clearly “any amount of capital investment that is diverted to the implementation of LNP will reduce needed capital from broadband investments.” (Santel Ex. 1, p. 3).

Considerable evidence was presented indicating that broadband deployments would be impacted if the requested LNP suspensions are not granted. These impacts provide further good reason for finding that granting the requests would be in the public interest consistent with 47 U.S.C. § 215(f)(2)(B). Petitioners should not be forced to incur substantial costs and to redirect their limited resources into the provisioning of an unwanted, and unnecessary, service.

3. GIVEN THE CURRENT LACK OF DEMAND, THE ASSESSMENT OF A LNP SURCHARGE ON REMAINING LANDLINE CUSTOMERS IS ALSO CONTRARY TO THE PUBLIC INTEREST.

As pointed out by a number of witnesses during the hearing, there are also concerns with LNP implementation because of the current method prescribed for the recovery of carrier-specific costs directly related to providing LNP. (Tr. 297, 324, 444, 445; SDTA Ex. 1, p. 9). Pursuant to the FCC’s rules, incumbent local exchange carriers implementing LNP are directed to recover “specific costs directly related to providing long-term number portability” by establishing a “monthly number-portability charge” that is charged to its end-users on a per-line basis (excluding lines provided to customers on Lifeline Assistance). 47 C.F.R. § 52.33. Under present day circumstances, where there is little, if any, demand for intermodal LNP, this prescribed cost recovery method gives rise to other public interest related concerns. As Mr. Watkins testified, the surcharges and potential basic rate increases that would be necessary for Petitioners to recover the costs of LNP implementation are not consistent with “cost causer principles”. This presents an extreme irony: “The very few customers that may want to port their wireline number from Petitioners to another carrier’s service, such as a wireless carrier’s service, will no longer be customers of the Petitioners. The vast majority of Petitioners’ end users that remain will

shoulder the charges and costs to the benefit of only a handful of users that are no longer customers of the LEC. The vast majority of customers that do not want to port will be forced to foot the bill for the very few that do.” (SDTA Ex. 1, p. 9).

This method of cost recovery is especially unfair if the demand for the service is almost non-existent, as with intermodal LNP. Why should all customers be forced to pay for a service that will only bring benefit to a few individuals? Arguably, there may be justification for socializing the cost recovery method and recouping costs from most, if not all telecommunications end users, where demand for the service is prevalent. But, if this is not in fact the case, the assessment of charges on customers who do not use and thus do not benefit from the service is particularly unfair. It is plainly contrary to the “public interest.”

Moreover, it should be remembered that the FCC departed from the cost-causer method of cost recovery in the case of LNP because, theoretically, all carriers and customers would be able to benefit from LNP. Therefore, the FCC reasoned, each carrier should be responsible for its own implementation costs. This is not the case with intermodal LNP for Petitioners, however. As previously discussed, wireless to wireline porting will not be available because, in most cases, the rate centers of wireless carriers do not match the rate centers of Petitioners. Thus, the mutual benefit upon which the FCC relied to justify departure from cost causer principles does not exist for Petitioners.

#### 4. GENERAL CLAIMS THAT IMPLEMENTING LNP WILL PROMOTE GREATER COMPETITION AND CONSUMER CHOICE ARE INSUFFICIENT.

Both Western Wireless and Midcontinent contend that implementing LNP is necessary to promote further competition in the Petitioners’ rural service areas and to bring consumers greater choice. (Midcontinent Ex. 1, pp. 3, 4; Western Wireless Ex. 1, pp. 23, 25, 26). Such general claims of competitive benefits are not sufficient to override the intended purposes of Section

251(f)(2). Although one purpose of the Telecommunications Act of 1996 was to promote competition for local exchange services, a second primary purpose was to protect universal service and the provisions of Section 251(f)(2) were clearly put into the Act for that reason. State Commissions are specifically given authority under Section 251(f)(2) to suspend and/or modify any of the requirements contained in §§ 251(b) and 251(c) of the Act (including interconnection and other service requirements that were specifically imposed for the purpose of promoting local service competition). Indeed, the very purpose of the suspension and modification provisions contained in Section 251(f)(2) is to allow state commissions to override, in effect, rules related to competition. This being the case, it is obviously insufficient, for purposes of addressing Section 251(f)(2)'s public interest standard, to claim that the implementation of LNP is necessary to promote competition.

There is also no reason to conclude that benefits would result in bringing consumers greater choice, because as noted above, there currently is no consumer demand for the LNP service. Simply put, diverting carrier resources in order to bring consumers a choice they do not want does not benefit consumers.<sup>15</sup>

Furthermore, even though claims are made by Western Wireless that the provisioning of LNP by the rural carriers is necessary to enhance competition, there is other evidence to the contrary. The record reflects, for instance, that Western Wireless is already competing in the Petitioners' service areas without LNP. (Tr. 568, 640, 641, 644) And, as indicated by the testimony

---

<sup>15</sup> The previously referenced decision of the Nebraska Public Service Commission, which granted a LNP suspension until January 20, 2006 to many of Nebraska's rural local exchange carriers, includes findings addressing the claims made by Western Wireless that LNP is necessary to provide greater choice. In that decision, the Nebraska PSC noted that "Mr. Williams testified that public interest means consumer choice and that LNP is about elimination of a barrier for consumer choice." In response, the Nebraska PSC concluded: "While the Commission acknowledges that introduction of competition into telecommunications markets is a key policy of the 1996 Telecommunications Act, without any evidence that demand for intermodal LNP exists and thus, that consumer choice is being thwarted, this Commission must assign greater weight to another Congressional policy of the Act." See, *Nebraska Order*, page 14.

of Mr. Adkins of Swiftel, Western Wireless is competing successfully. He indicated that Swiftel already has seen a significant migration of customers from wireline to wireless. (Tr. 311). Over the last three years, as a result of college students moving from wireline to wireless, the company's access line count has gone down approximately 1,200 phone lines. This illustrates, as pointed out by Mr. Adkins, "that what we have is pretty fair competition without local number portability." (Tr. p. 312). With respect to the claimed advantages of LNP, as further commented on by Mr. Adkins, "in an environment where competition is being served, the customers are, in fact, migrating as they desire from wireline to wireless . . . to say that they would be advantaged when you look at the cost to provide that small advantage, it certainly doesn't seem to . . . it certainly doesn't seem to pass muster on the benefit ratio." (Tr. 312).

It is also clear, and as has been noted previously, that Western Wireless itself is a new and, perhaps, disingenuous, advocate of the position that LNP is necessary to promote competition between wireless and wireline providers. As Mr. Watkins testified, "Western Wireless has also previously concluded in comments filed with the Federal Communications Commission (FCC) that 'LNP is unnecessary to further competition.' Reply Comments of Western Wireless filed October 21, 2001, in WT Docket No. 01-184 at pp. 2-5 . . . . Western Wireless noted that, as a provider of conventional cellular and wireless local loop services, 'Western is making significant inroads competing against wireline service providers – without offering LNP.'" Western Wireless went on to state that "there is no evidence to suggest that the inability of CMRS customers to port their numbers is an impediment to changing service providers."

Thus, contrary to the general claims made by both Midcontinent and Western Wireless, there is absolutely no evidence on the record that any measurable public benefit will be facilitated by LNP implementation. There is no consumer demand for the service

and, as a result, forced implementation of LNP would only result in substantial additional costs and charges without any corresponding consumer benefit.<sup>16</sup>

5. IF THE FCC SHORTENS THE “PORTING INTERVAL” THIS WILL ALSO INCREASE LNP IMPLEMENTATION COSTS.

Along with its *Nov. 10<sup>th</sup> Order*, the FCC issued a Further Notice of Proposed Rulemaking on a number of issues including the issue of whether the current established “porting interval” should be reduced and also issues related to the porting of telephone numbers from wireless-to-wireline.<sup>17</sup> Specifically, regarding the porting interval, the FNPR seeks comment on whether the FCC should “reduce the current wireline four business day porting interval for intermodal porting.”<sup>18</sup> In seeking these comments, reference was made in the FNPR to the intention of wireless carriers to complete their “intramodal wireless ports” within two and one-half hours, which raises concerns among landline LECs that the current four day porting interval could be shortened considerably.

As testified to by a number of Petitioners’ witnesses, if the FCC proceeds under its pending FNPR to reduce the porting interval from the current four day interval there will be an impact on LNP implementation costs, and in many cases this impact would be substantial. (Davis Ex. 1 pp. 18, 19; ITC Ex. 3 p. 18; Brookings Ex. 3 pp. 18, 19; Stockholm Ex. 3 p. 19; Venture Ex. 3 pp. 18, 19; West River Ex. 3 p. 18; SDTA Ex. 1 pp. 15, 36; Tr. pp. 897, 898). Thus, the costs differences are significant between the costs that are necessary to implement a “manual” vs. “automated” service order administration (“SOA”) process. Moreover, the prospect of some future decision by the FCC causes Petitioners to be concerned, because under the current FCC

---

<sup>16</sup> Mr. Williams also claimed that the absence of LNP also affects wireless-to-wireless ports, specifically alleging that the benefits of wireless-to-wireless porting may be lessened if LNP is not ordered. (Tr. 562). In later questioning regarding these alleged impacts, however, Mr. Williams indicated that the particular problem (associated with routing calls from landline to wireless customers who have a ported number) was already being addressed by Western Wireless through its provisioning of a “default query service.” (Tr. 599).

rules pertaining to the establishment of a “monthly number-portability charge” the charge is to be “levelized” over five years, or in other words must remain constant over that period. As previously discussed, there are no provisions in the FCC rule relating to LNP cost recovery (47 C.F.R. § 52.33) that permit revision to the established monthly number portability charge, should actual LNP related costs change over the 5 year period that the charge is to be in effect and the FCC has indicated that waivers will not be forthcoming easily.

It is obvious from the foregoing that revising end-user LNP surcharges after they have been established would be problematic; it is also very possible that the FCC will reduce the current porting interval; and that this will affect costs to be incurred by Petitioners in their provisioning of the LNP service. This additional uncertainty related to the pending “porting interval” issue also supports and affirmative public interest finding pursuant to 47 U.S.C. § 251(f)(2).

6. THE FCC’S FAILURE TO ADDRESS WIRELESS-TO-WIRELINE PORTING ISSUES IN CONJUNCTION WITH ORDERING WIRELINE-TO-WIRELESS PORTING SHOULD ALSO BE CONSIDERED.

In addition to not addressing the pending porting interval issue in its *November 10 Order*, the FCC also left to another day issues needing to be resolved in order to implement wireless-to-wireline porting capabilities. Like the porting interval issue, various issues related to wireless-to-wireline porting were noticed for comment as part of the FNPR issued along with the *November 10 Order*. In implementing intermodal LNP, wireline-to-wireless, but not at the same time requiring under similar circumstances the porting of numbers from wireless-to-wireline, the FCC has established what amounts to a “one-way” porting environment.

As testified to by Mr. Watkins:

The manner in which the FCC put in place intermodal porting, inconsistent with the reports of the industry workgroup that had been

---

<sup>17</sup> *Nov. 10<sup>th</sup> Order*, FCC 03-284, at pars. 41 thru 51.

<sup>18</sup> *Id.* at par. 49.

charged with examining the intermodal issues, means that there is an extreme disparity between wireline-to-wireless opportunities to port versus wireless-to-wireline. Therefore, for the most part, Petitioners will be able to lose customers if LNP is implemented, but will not be able to get them back. The necessary methods and rules to allow wireless-to wireline porting that would be competitively fair are the subject of a further rulemaking proceeding before the FCC with no apparent resolution of the geographic disparity issues that are at the root of the issues. . . . In the meantime, a competitively unfair version of intermodal LNP is in place. (SDTA Ex. 1 pp. 9, 10)

Petitioners strongly urge this Commission to keep the above described competitive unfairness in mind in reviewing the requested LNP suspensions. Under the version of intermodal LNP ordered by the FCC, there is absolutely no upside for the rural LECs. The Petitioners are faced with losing local service customers and must expend substantial additional dollars to facilitate this loss. Such a result can only have negative impacts and will only serve to increase local service rates for most rural consumers and harm universal service efforts. (Tr. pp. 297, 303, 304, 364, 365, 378, 399, 400, 445, 503, 511, 514).

#### IV.

#### CONCLUSION AND SUMMARY OF REQUESTED RELIEF

As this brief and the record demonstrate, LNP deployment in South Dakota is an expensive solution in search of a problem. Western Wireless has defined the “problem” as the need to better compete in the local exchange market. Yet, the record clearly demonstrates (e.g., testimony of Brookings’ witness, Mr. Adkins) that wireless companies are winning customers away from rural ILECs without LNP. And, for the vast majority of rural customers, whose telephone company managers testified at the hearing, LNP is a service they simply do not want. As this brief has discussed earlier, wireless services in South Dakota complement, rather than replace, wireline service and logically so, given the poor coverage afforded by wireless carriers.

Against such modest advantages of LNP are arrayed its considerable costs. The costs of implementation alone, setting aside the transport issue, constitute a “significant adverse economic impact” and ‘undue economic burden’ on both the companies and their customers. The recently issued *Nebraska Order*, discussed earlier, finds that a range of end user surcharges between \$0.64 and \$12.23 per month, including surcharges and taxes, would impose a “significant adverse economic impact on users of telecommunications generally.” *Id.*, p. 11. The prospect of additional costs being imposed on Nebraska’s rural carriers, by virtue of FCC determinations, likewise justified suspensions as “unduly economically burdensome”, according to the Nebraska Commission. *Id.*, p. 12. The evidence in this case proves the likelihood that similar costs and cost uncertainties attend the imposition of LNP.

All of this, of course, does not contemplate the havoc that could be wreaked upon South Dakota’s intercarrier compensation regime of access charges, reciprocal transport and termination charges and potential transit charges charged by third parties, such as Qwest, if rural carriers are forced to carry traffic to locations distant from their exchanges.

In light of these costs, and the technical infeasibility of transporting LNP traffic without any intercarrier arrangements, the imposition of LNP by the rural carriers clearly is not in the public interest. The Petitioners accordingly request the following relief, consistent with the recommendations of SDTA’s witness, Mr. Watkins (Tr. 504-05):

- 1). The current suspension of the FCC’s LNP requirements should be extended until cost and demand are better balanced from a public interest perspective;
- 2). Such suspension should continue and evaluations take place, no earlier until such time that the courts and the FCC resolve outstanding LNP issues, including currently pending LNP rulemakings;

- 3). The Commission should meanwhile confirm that under no circumstances do the Petitioners have the responsibility to transport local calls to some distant location, and ;
- 4). If and when the issues are resolved, and public interest circumstances have changed to warrant LNP implementation, some period of time should be allowed to facilitate Petitioners' provisioning of the necessary hardware and software, and to implement necessary administrative processes.

CERTIFICATE OF SERVICE

The undersigned hereby certifies that he served the original and ten copies of the foregoing POST-HEARING BRIEF OF PETITIONERS AND SDTA upon:

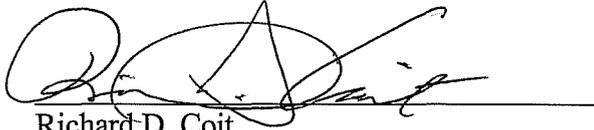

Ms. Pamela Bonrud  
Executive Director  
SD Public Utilities Commission  
500 East Capitol Ave.  
Pierre, South Dakota 57501

and a copy upon the persons herein next designated, on the date below shown, by depositing a copy thereof in the United States mail at Pierre, South Dakota, postage prepaid, in an envelope addressed to each said addressee, to-wit:

Talbot J. Wiczorek (also via Federal Express)  
Gunderson, Palmer, Goodsell & Nelson, LLP  
P. O. Box 8045  
Rapid City, South Dakota 57709-8045

David A. Gerdes  
MAY, ADAM, GERDES & THOMPSON  
P. O. Box 160  
Pierre, South Dakota 57501

Dated this fifth day of August, 2004.

A handwritten signature in black ink, appearing to read "Richard D. Coit", is written over a solid horizontal line.

Richard D. Coit  
Director of Industry Affairs  
South Dakota Telecommunications Association  
P. O. Box 57  
Pierre, South Dakota 57501

- TC04-061    West River Cooperative Telephone Company
- TC04-062    Stockholm-Strandburg Telephone Company
- TC04-084    Tri-County Telcom, Inc.

**PROCEDURAL HISTORY**

In 2004, a number of rural local exchange telephone companies filed petitions pursuant to section 251(f)(2) of the federal Communications Act of 1934 as amended, (the Act) and SDCL 49-31-80 seeking suspension or modification of their requirement to implement local number portability (LNP) under section 251(b)(2) of the Act. The

Petitioners are as follows: Kennebec Telephone Company (Kennebec); Santel Communications Cooperative, Inc. (Santel); Sioux Valley Telephone Company (Sioux Valley); Golden West Telecommunications Cooperative, Inc., Vivian Telephone Company, and Kadoka Telephone Company (Golden West/Vivian/Kadoka); Armour Independent Telephone Company, Bridgewater-Canistota Independent Telephone Company, and Union Telephone Company (Armour/Bridgewater/Union); Brookings Municipal Utilities d/b/a Swiftel Communications (Brookings); Beresford Municipal Telephone Company (Beresford); McCook Cooperative Telephone Company (McCook); Valley Telecommunications Cooperative Association, Inc. (Valley); City of Faith Telephone Company (Faith); Midstate Communications, Inc. (Midstate); Western Telephone Company (Western); Interstate Telecommunications Cooperative, Inc. (ITC); Alliance Communications Cooperative, Inc. and Splitrock Properties, Inc. (Alliance/Splitrock); RC Communications, Inc. and Roberts County Telephone Cooperative Association (Roberts County/RC); Venture Communications Cooperative (Venture); West River Cooperative Telephone Company (West River); Stockholm-Strandburg Telephone Company (Stockholm-Strandburg); James Valley Cooperative Telephone Company (James Valley); Tri-County Telcom, Inc. (Tri-County); and Cheyenne River Sioux Tribe Telephone Authority (CRST).

Intervention was granted to WWC License LLC d/b/a CellularOne (WWC) and the South Dakota Telecommunications Association (SDTA) in all of the dockets and intervention was granted to Midcontinent Communications (Midcontinent) in Santel, Sioux Valley, Valley, Faith, ITC, Alliance/Splitrock, Roberts County/RC, Venture, West River and

James Valley. Midcontinent later withdrew its interventions in Roberts County/RC and West River. Prior to the hearings on the petitions, the Commission issued an order granting the Petitioners' requests for interim suspension of their obligations to implement LNP pending final decision as allowed by section 251(f)(2) and SDCL 49-31-80.

The hearings were held on these dockets beginning on July 21, 2004. A related docket, TC03-192, was also included as part of the hearings. This docket concerned a motion by Midcontinent to compel local number portability or good faith negotiations with ITC. During the course of the hearing, James Valley and CRST went on record as stating that they had entered into settlement agreements and, thus, no hearings were held on those two dockets. In addition, Midcontinent and ITC entered into a Settlement Agreement concerning Docket TC03-192. At its July 20, 2004, meeting, the Commission approved that Settlement Agreement. At its August 17, 2004, meeting, the Commission approved the Stipulation for James Valley (Docket TC04-077) and the Stipulation for CRST (Docket TC04-085).

### **JURISDICTIONAL STATEMENT**

The Commission has jurisdiction over this matter pursuant to section 251(b)(2) of the federal Act and SDCL 49-31-80. Although Western Wireless attempted to cast doubts on the Commission's jurisdiction to consider suspensions, the FCC has recognized the jurisdiction of the state commissions to grant or deny petitions to suspend the implementation of LNP.<sup>1</sup>

---

<sup>1</sup> TR. at 565-68. Staff notes that the chairman of the FCC is urging "State Commissions to consider the burdens on small businesses in addressing those waiver requests and to grant the requested relief if the State Commissions deem it appropriate." Venture Exhibit 4.

## LEGAL STANDARDS

The federal Act requires local exchange carriers "to provide, to the extent technically feasible, number portability in accordance with the requirements prescribed by the [Federal Communications] Commission." 47 U.S.C. § 251(b)(2). In its November 10, 2003 order, the Federal Communications Commission (FCC) required local exchange carriers that are located outside of the top 100 metropolitan statistical areas to provide LNP and to port numbers to wireless carriers.<sup>2</sup> Pursuant to this order, local exchange carriers were required to provide LNP by May 24, 2004, or within six months of the date that the local exchange carrier receives a bona fide request.

State commissions are given the authority under the Act to grant a suspension or modification of local number portability requirements if the local carrier has fewer than two percent of subscriber lines nationwide.<sup>3</sup> The applicable South Dakota statute is based on the federal statute. SDCL 49-31-80 provides as follows:

Consistent with 47 U.S.C. § 251(f)(2) as of January 1, 1998, the commission may grant a suspension or modification of any of the interconnection or other requirements set forth in 47 U.S.C. §§ 251(b) and 251(c), as of January 1, 1998, to any local exchange carrier which serves fewer than two percent of the nation's subscriber lines installed in the aggregate nationwide. Any such carrier shall petition the commission for the suspension or modification. The commission shall grant the petition to the extent that, and for such duration as, the commission determines that the requested suspension or modification is consistent with the public interest, convenience, and necessity and is necessary:

- (1) To avoid a significant adverse economic impact on users of telecommunications services generally;

---

<sup>2</sup> *In the Matter of Telephone Number Portability*, CC Docket 95-116, Memorandum Opinion and Order and Further Notice of Proposed Rulemaking, FCC 03-284 (rel. November 10, 2003).

<sup>3</sup> 47 U.S.C. § 251(f)(2). All of the Petitioners meet the "less than two percent" requirement.

- (2) To avoid imposing a requirement that is unduly economically burdensome; or
- (3) To avoid imposing a requirement that is technically infeasible.

The commission may suspend enforcement of the requirement or requirements identified in the petition pending final action on the requested suspension or modification.

Thus, based on both state and federal law, the Commission must evaluate the three standards as outlined in the statutes and determine whether a suspension or modification is necessary and is also consistent with the public interest, convenience, and necessity. If the Commission grants a suspension or modification, the Commission must also determine how long any such suspension or modification should last.

The first two standards focus on economic impacts. The first standard is centered on the customer - is suspension or modification necessary to avoid significant adverse economic impact on customers. The difficulty in applying this standard lies in deciding at what point the economic impact becomes significantly adverse.

The second standard requires the Commission to look at whether implementation of LNP would impose a requirement that is unduly economically burdensome. Although at first Staff thought that this standard could be evaluated by looking at the impact on the company, it seems to make more sense that this standard should be applied to both the consumer and the company, especially given the uncertainties surrounding how the costs of LNP will be distributed between the company and the consumers. For instance, it is difficult, at this point, to actually determine a fairly definite number that would be used by

the company to impose a surcharge on their customers.<sup>4</sup> Second, even if a surcharge could be stated with a relatively certain degree of accuracy, any costs not recovered in the surcharge could still be recovered from the customers through an increase in local rates. Third, an LNP surcharge is not mandatory and a company could choose not to implement one. Thus, Staff will evaluate this standard by considering the possible effects on both consumers and company.

With respect to the two economic standards, Staff notes that even without transport costs, the costs to implement LNP are considerable.<sup>5</sup> Predictably, the smaller the number of access lines, the greater the economic impact is on the consumer and the company. In addition, for some companies there are economic impacts beyond those that perhaps could reasonably have been expected. For example, in some cases, the implementation of LNP would require a company to acquire a new switch or invest a considerable amount of money to upgrade a switch that may need to be replaced in the next couple of years.

The third standard requires the Commission to determine whether the imposition of local number portability is technically infeasible. Staff will discuss this standard further below.

The final standard is one that this Commission is certainly familiar with -- is the request for suspension consistent with the public interest, convenience, and necessity. One of the main benefits of local number portability is that it is a tool for fostering

---

<sup>4</sup> The FCC has authorized the companies to place a surcharge on their customers for LNP costs.

<sup>5</sup> When evaluating the individual companies, Staff has not included transport costs. This is based on Staff's position, discussed in more detail below, that the Petitioners are not responsible for the cost to transport calls outside of their exchange areas.

competition. In addition, Staff would expect that the demand for LNP will continue to grow, especially in areas where wireless coverage is good or where wireline competition exists. On the other hand, there are significant costs associated with the implementation of LNP and there are unresolved issues that could further impact those costs. Staff believes that the Commission needs to conduct a cost versus demand analysis when considering the public interest. Or, in other words, the lower the demand and the higher the costs, the greater the likelihood becomes that the imposition of LNP is not in the public interest. Conversely, higher demand coupled with lower costs tilts the balance in favor of requiring implementation of LNP. When making its recommendations, Staff has attempted to conduct this balancing test for each of the companies.

## **ISSUES**

Staff will first discuss some of the major areas of disagreement among the parties.

Following that discussion, Staff will evaluate the particular facts for each company and make recommendations.

### *1. Transport*

Transport costs comprised a significant portion of the costs to implement LNP as estimated by the Petitioners. Transport costs as estimated by WWC were considerably smaller. The highest transport costs were set forth by the companies who used John DeWitte as their cost witness. DeWitte's high transport costs were due to the method that he chose to provide transport. Under DeWitte's method, each wireless carrier would directly connect with a DS-1 to each end office or host office. DeWitte estimated the cost of each direct connection at either \$4,000 or \$5,000, depending on the company. TR. at 216-17. In addition, DeWitte did not limit the number of wireless carriers to wireless

carriers who were currently serving each exchange, but also included wireless carriers that were authorized to serve and that were considered, by the Petitioners, to be likely to serve in the next few years. TR. at 218.

The transport method proposed by the Petitioners who used Dan Davis and Tom Bullock, the TELEEC cost witnesses, was somewhat similar to the method proposed by DeWitte. The TELEEC cost witnesses proposed using a T-1 circuit installed between each host or stand-alone switch that is not subtended from a local tandem to each wireless carrier that is currently providing service in the RLEC's territory that does not already have a direct trunk into the RLEC's network. TR. at 868. This methodology also resulted in significant transport cost although the costs were less than the costs derived using DeWitte's method.

By contrast WWC's routing method was based on converting existing one-way trunks to the Qwest tandem to two-way trunks and using Qwest as the transit provider. This routing method resulted in significantly lower costs.<sup>6</sup> For example, under DeWitte's routing method, ITC's non-recurring transport costs would be \$576,000 with a monthly recurring cost of \$153,069. ITC Revised Exhibit 4B. Contrast those numbers with WWC's routing method which resulted in non-recurring costs of \$1,200 and monthly recurring costs of \$2,228. WWC Exhibit 9. For Alliance/Splitrock, the TELEEC witness' routing methodology resulted in non-recurring transport costs of \$11,789 and recurring transport

---

<sup>6</sup> Staff notes that WWC stated at the hearing that WWC would pay for transport on an interim basis, until the final FCC decision on transport, provided the Qwest tandem based routing method was used. TR. at 939.

costs of \$15,502. Alliance Exhibit 3. For the same company, WWC estimated non-recurring costs of \$564 and recurring transport costs of \$1,441. WWC Exhibit 15.

The main basis for the routing methodology as proposed by the Petitioners' cost witnesses appeared to be that the Petitioners' current interconnection agreement requires direct connections. TR. at 175. However, the Petitioners' routing methods are not the most efficient methods to route or, obviously, the least costly methods. *Id.*

Staff's position is that the Commission does not need to dictate any particular transport route. Staff believes that the question that the Commission *does* need to answer is whether the Petitioners are responsible for the costs of transporting LNP traffic outside of their exchange areas.<sup>7</sup> Staff's position is that the Commission should find that an RLEC is *not* responsible for the cost of transporting LNP traffic outside of its exchange area. A local exchange company should not be required to transport local exchange calls beyond its local exchange area.

If the Commission finds that an RLEC is not responsible for transporting LNP traffic outside of its area, the next question that needs to be answered is how should the traffic be routed. Staff believes that the Commission should not require that a requesting carrier directly connect with the RLEC in each exchange. It will then be up to the RLEC and requesting carrier to negotiate the most efficient and reliable transport method. Thus, the RLEC and the requesting carrier will negotiate the method of transport, knowing that if the routing method requires transport of the call outside of the RLEC's area, the requesting

---

<sup>7</sup> Apparently the FCC is considering this issue in a pending docket. See *In the Matter of Sprint Corp. Petition for Declaratory Ruling Regarding the Routing and Rating of Traffic by ILECs*, CC-Docket 01-92, Petition of Sprint, May 9, 2002.

carrier would be responsible for those transport costs. The routing method would then be based on how each carrier's current network is configured for that particular service area. Staff believes that the settlement agreements in James Valley and CRST demonstrate that the parties are in the best position to determine how to route LNP traffic.

## 2. *Porting Estimates*

A critical element in the analysis of whether LNP requirements should be suspended is whether the costs of LNP can be justified given the demand for the service. Unfortunately, it would appear that accurately estimating LNP demand, especially for wireline to wireless ports, is fairly difficult. Based on the evidence presented, Staff does not have much confidence in the porting estimates presented by any of the parties.

WWC's witness, Williams, stated that WWC's porting estimates were "based on what we thought we would be able to obtain as a result of both our coverage and our view of what their demographics represented." TR. at 1031. His estimates for ports, based on each company's number of access lines, ranged from a low of 2.743% for Golden West to a high of 3.528% for Brookings. WWC Exhibits 9, 15, 18, 19. Williams further stated that, for most of the companies, the numbers are close to what WWC would expect in WWC's rural areas, which is approximately 15 percent intermodal porting over a five year period. TR. at 1031. He assumed that WWC would have about 45% of the total estimated ports. TR. at 690. Williams stated that there has not yet been any experience in intermodal porting in rural service areas so far. *Id.* He went on to state that there is a track record for wireline to wireline portability and that has resulted in an annual migration of 3.5% to 4.5%. *Id.* at 1033. He also stated that he would not expect wireline to wireless migration to be that high. *Id.*

Regarding the issue of demand, Steven Watkins, a witness for the Petitioners, stated that NeuStar reported that "95% of wireless ports have been from one wireless carrier to another and only 5% of wireless ports were between wireline and wireless carriers." SDTA Exhibit 1 at 11. He noted that these numbers were based on wireless to wireline reporting in more urban areas and expected that interest in rural areas would be even less. *Id.* He stated that in rural areas "the public does not recognize wireless service as an absolute substitute for wireline service" due to reliability and that "demand for wireless service is more for its mobile capability[.]" *Id.* at 12. He further stated that even for customers who decide to give up their wireline service for wireless generally will try wireless service first and then drop their wireline service. *Id.* Thus, there would not be a need to port numbers in that case. *Id.*

DeWitte, the cost witness for Brookings, ITC, Stockholm-Strandburg, Venture, West River, and Santel, also referenced the NeuStar report. Santel Exhibit 2 at 18. DeWitte believed that the porting percentage would be small for rural areas because of the "lack of ubiquitous quality and incomplete coverage of the Petitioner's existing service area by the existing wireless carriers." *Id.* DeWitte's estimated number of ports were quite low and ranged from 0.021% to 0.341% of a company's access lines per year.

Bullock, the cost witness for Alliance/Splitrock, Armour/Bridgewater/Union, Faith, Golden West/Vivian/Kadoka, McCook, Sioux Valley, Tri-County, and Valley, stated that he assumed that if LNP were required, the wireless companies would begin an aggressive marketing campaign which may generate some porting activity. TR. at 890. He also assumed that some of the customers would port back to the wireline carrier. *Id.* He stated

that he did not do a scientific analysis since there is no track record for number porting in rural areas. *Id.* He also stated that his porting estimates were not based on the number of wireless carriers operating in any particular area. *Id.* at 891. Bullock's estimated number of ports were higher than DeWitte's and ranged from 0.694% to 3.061% of a company's access lines per year.

Davis, the cost witness for Beresford, Kennebec, Midstate, Roberts County/RC, and Western, also used porting estimates when he calculated the cost to implement LNP. However, at the hearing, he stated that his porting numbers should not be taken as "any sort of estimate for demand" and that he did not do any type of empirical analysis. TR. at 1009-10. He just picked a number to "show a relationship between a specific demand level and what the resulting costs would be." TR. at 1009.

Only one company, Kennebec, attempted to forecast demand through a survey to its customers. The survey showed that 2.6 of the survey respondents were willing to pay a surcharge of \$2.00 per month for LNP. TR. at 957. If the surcharge were a \$1.00 a month, the demand increased to 12%. TR. at 964-65.

After reviewing the evidence presented, it appears to Staff that, as might be expected, the demand for porting will likely fall somewhere in between the numbers as forecasted by the Petitioners and those set forth by WWC. Staff believes that Williams numbers are too high based on a number of factors. First, according to Williams own testimony *wireline to wireline* portability has only resulted in porting percentages of 3.5% to 4.5%. TR. at 1033. Moreover, a survey regarding *wireless porting* showed that only 5% of wireless ports were *between wireline and wireless carriers*. SDTA Exhibit 1 at 11. On

the other hand, DeWitte's estimates that averaged less than two tenths of one percent appear to be somewhat low. For example, in Kennebec, 12% of the survey respondents would be willing to pay a dollar a month in order to have the ability to port their wireline numbers to their wireless carrier. TR. at 965. In addition, one of the cost witnesses, Bullock, used estimates that ranged from 0.694% to 3.061%.

Based on all of the evidence presented at the hearing, Staff asserts that a more realistic number might be around one and one half percent for the more densely populated areas that have adequate cellular coverage. Staff would expect the percentage to be lower in less densely populated areas with less than adequate cellular coverage.

### *3. Non-Transport Costs*

With respect to non-transport related costs, the Petitioners and WWC disagreed on some categories of costs. Staff will address the major disagreements, to the extent they are relevant to Staff's recommendation, when Staff makes its recommendation for each company.

### *4. Technical Infeasibility*

In their brief, the Petitioners contend that "in light of current routing arrangements, it is technically infeasible to complete calls on a local basis to telephone numbers ported to a wireless provider." Post-Hearing Brief of Petitioners and SDTA at 3. The Petitioners' brief also refers to "the technical infeasibility of transporting LNP traffic without any intercarrier arrangements." *Id.* at 54. To the extent the Petitioners are claiming that this meets the standard of "technical infeasibility," Staff asserts that the Petitioners' definition is incredibly broad and serves to render the standard almost meaningless. An analysis of whether LNP is technically infeasible should not be based on whether, using the current

routing methods, LNP can be implemented. Using this type of analysis, the Petitioners could just as well argue that LNP is technically infeasible because their switches do not currently have any LNP capability.

According to some of the Petitioners' own witnesses, LNP is technically feasible. Bryan Roth, manager for McCook, agreed that LNP was technically feasible. TR. at 829. Pamela Harrington, general manager of Roberts County and RC, stated that LNP is technically feasible with the proper upgrades. TR. at 1049. Davis, one of the cost witnesses, stated that under his proposed routing method, LNP is technically feasible. TR. at 997. Dennis Law, Golden West's manager, stated that his companies are technically able to connect to the Qwest tandem. TR. at 791-792.

It is Staff's position that it is technically feasible for each of the Petitioners to implement LNP. It will obviously cost money to implement LNP, but it can be implemented. Therefore, Staff will evaluate each company in light of the two economic standards and the public interest standard.

### **RECOMMENDATIONS BY COMPANY**

Based on the evidence presented at the hearing, Staff has three different recommendations. Staff recommends that some of the very high cost companies should be granted a two year LNP suspension, which would be until May 24, 2006. For the companies in this group, Staff submits that the high costs, coupled with the small number of access lines which will result in a very low number of monthly ports, demonstrate that these companies meet the statutory standards.

For the second group of companies, Staff recommends that these companies be granted an one year LNP suspension, which would be until May 24, 2005. For these companies, the costs are still considerable. Staff believes that these companies also meet the statutory standards.

Given the projected costs and demand, Staff submits that these companies would benefit from additional certainty in the process which would result when the FCC acts on issues such as porting intervals and transport routing issues. Staff would hope that the FCC decisions will be made by late this year or early next year. After the FCC decisions are issued, the companies should have a clearer picture of what costs must be incurred to implement LNP. The decisions may result in lower projected costs or higher projected costs, but either way, there should be more certainty. Further, the additional time should result in the ability to more accurately predict demand based on what has occurred in other rural areas. Depending on the demand that is experienced in other rural areas where LNP has been implemented, it is possible that these companies could justify a further suspension. On the other hand, if the demand is closer to Western Wireless' estimates of 3% per year or 15% over five years, then the Commission may decide to not allow any further suspensions.

Staff believes that these suspensions should be reviewed sooner than the first group given that the estimated costs per line are lower and the number of monthly ports will likely be higher given the larger number of access lines when compared with the first group. Or, in other words, because these companies present a closer question as to whether a suspension is necessary, Staff recommends a one year suspension as opposed to a two year suspension.

For the third group of companies, Staff recommends that the Commission deny any further suspension beyond what is needed to immediately begin implementation of LNP. Given the lower costs and higher expected demand, Staff does not believe that these companies meet the public interest standard. In each case, the companies estimated costs are below a dollar, in some cases considerably below a dollar a month, and their number of access lines are greater which will result in a higher number of ports each month. For each company Staff attempted to balance the economic impact on the consumers and company with the benefits of LNP. For these companies, where the estimated costs are lower and the estimated demand is higher, Staff believes that the cost versus demand balancing test is tilted in favor of implementing LNP.

***Companies that should be granted a suspension until May 24, 2006.***

***Faith***

Faith's cost witness projected an LNP cost of \$3.10 per line per month. WWC projected \$2.42 cost per line per month. WWC Exhibit 15. Both projected only 12 ports per year, one per month. *Id.* In addition, Faith will lose support for its Mitel switch at the end of 2007. TR. at 762. Faith did not know whether it would need to buy a new switch or upgrade the switch at that time. TR. at 762. WWC's witness stated that it would be appropriate for the Commission to give Faith a suspension until March 31, 2005 and allow Faith the opportunity to request a further suspension depending on its projected cost and estimated demand at that time. TR. at 622.

It is Staff's position that given the high per line costs (whether one relies on WWC's or Faith's cost testimony) and the projected low demand by both Faith and WWC, that

Faith should be granted a suspension until May 24, 2006. At that point, Staff anticipates that there will also be much better numbers regarding demand for LNP based on numbers from other rural areas where LNP has been implemented. Staff further expects that the issues that are currently pending at the FCC will be decided.<sup>8</sup> The Commission can then evaluate whether any further suspension should be granted.

Another reason why Staff believes that Faith should be granted a suspension until May 24, 2006 is that Staff would expect that by 2006, Faith should know what it intends to do regarding its switch. It makes little sense to require a company to put in significant dollars to upgrade a switch that may be replaced in a couple years. If Faith intends to replace the switch, Staff assumes the new switch will be LNP compliant.

Given the high costs, low porting estimates, and switch situation, Staff believes that Faith has shown that it meets the statutory standards for suspension.

In order to evaluate any future request for suspension, Staff recommends that Faith be required to keep track of all LNP inquiries or requests from its customers. Staff also recommends that the wireless carriers serving Faith also keep track of inquiries or requests.

### ***Tri-County***

Tri-County's cost witness projected an LNP cost of \$3.03 per line per month. WWC projected a cost of \$1.83 per line per month. WWC Exhibit 15. Tri-County estimated 12 ports per year while WWC projected only 13 ports per year. *Id.* At the hearing, Tri-

---

<sup>8</sup> In addition, depending on what decisions are made at the FCC, it is conceivable that an RLEC may request suspension or modification of any FCC requirements.

County's cost witness stated that he had learned that Tri-County would actually require a new switch to implement LNP. Bullock stated that "Tri-County has some ancient DMS-10s and to actually provide LNP they would have to replace both of their switches." TR. at 912. He stated that he did not include the costs of new switches because it was not Tri-County's position "that this huge switch replacement cost is eligible to be included in an LNP end-user charge, but if Tri-County does not receive a suspension of the LNP requirements and Tri-County proceeds to implement LNP, they have to replace their switches, and it will cost them a lot of money to do that." TR. at 917. As with Faith, WWC's witness stated that it would be appropriate for the Commission to give Tri-County a suspension until March 31, 2005. TR. at 623.

Based on the high costs and estimated low demand plus the need for Tri-County to replace its switches to implement LNP, Staff makes the same recommendation as its recommendation for Faith.

### ***Stockholm-Strandburg***

Stockholm-Strandburg's cost witness projected an LNP cost of \$4.99 to \$5.58 per line per month. ITC Revised Exhibit 4B. WWC projected \$2.62 to \$2.93 cost per line per month. WWC Exhibit 9. Stockholm-Strandburg estimated one port per year while WWC projected 23 ports per year. ITC Revised Exhibit 4B; WWC Exhibit 9. Even at 23 ports per year, Staff believes that Western Wireless' estimate is too high. As with Faith, WWC's witness stated that it would be appropriate for the Commission to give Stockholm-Strandburg a suspension until March 31, 2005. TR. at 623.

Once again, it is Staff's position that given the high per line costs (whether one relies on WWC's or Stockholm-Strandburg's cost testimony) and the projected low demand

by both Stockholm-Strandburg and WWC, that Stockholm-Strandburg should be granted a suspension until May 24, 2006.

### ***Kennebec***

Kennebec's cost witness projected an LNP cost of \$3.45 per line per month. WWC projected \$1.84 cost per line per month. WWC Exhibit 18. One of the major reasons for the differences in projected per line costs concerned switch-related investment costs. The issue was whether generic upgrades should be included as a cost. Williams excluded the costs for the generic upgrade to the switch in the amount of \$31,400 for Kennebec. TR at 1024. Williams agreed that Kennebec could not actually implement LNP without the generic upgrade but stated that the upgrade is "part of ongoing switch operations, maintenance investments, and includes other features and capability sets unrelated to LNP and, therefore, shouldn't be included when one's trying to estimate the cost of what LNP costs for a company." TR. at 1024-25.

Davis, Kennebec's cost witness, did not check with Kennebec as to whether it had planned to upgrade the host at any time in the future. TR. at 1006. Davis further stated that with respect to Kennebec, he did not know what other benefits would be derived from the generic upgrade or if it provides extra services. TR. at 999 to 1000.

Staff believes that under the statutory standards, the costs for the generic upgrades can be considered. It is not disputed that the generic upgrade will need to be done before LNP can be implemented. Whether the costs can be included in an LNP customer surcharge is not relevant when considering whether the costs of LNP meet the statutory standards for suspension -- these costs can still be recovered from the customer through

an increase in local rates. Thus, Staff believes that the per line costs will be closer to Kennebec's estimate than to Western Wireless' estimate. However, if the Commission grants Kennebec a suspension and Kennebec later asks for a further suspension, Kennebec should provide more information regarding when it plans to do a generic upgrade.

Regarding the estimation of ports, both Kennebec and WWC estimated 24 ports per year. WWC Exhibit 18. Staff believes that even this low estimate is too high. As with Faith, WWC's witness stated that it would be appropriate for the Commission to give Kennebec a suspension until March 31, 2005. TR. at 661-62.

Based on the high costs and estimated low demand, Staff makes the same recommendation as its recommendation for Faith.

### ***Western***

Western's cost witness projected an LNP cost per line of \$3.97, compared to \$1.80 as projected by WWC. WWC Exhibit 18. As with Kennebec, the major reason for the difference was whether generic upgrades should be included as an LNP cost. Williams, Western Wireless' witness, excluded the costs for the generic upgrade to the switch in the amount of \$93,000, stating that the costs are not directly related to LNP. TR. at 1021. Again, Davis, Western's cost witness, did not check with Western as to whether it had planned to upgrade the switch at any time in the future. TR. at 1006.

As with Kennebec, Staff believes that the costs for the generic upgrades can be considered. Thus, Staff believes that the per line costs will be closer to Western's estimate than to Western Wireless' estimate. However, if the Commission grants Western

a suspension and Western later asks for a further suspension, Western should provide more information regarding when it plans to do a generic upgrade.

Regarding the estimation of ports, both Western and WWC estimated 36 ports per year. WWC Exhibit 18. Staff believes that these estimates, although low, are still overly optimistic.

Based on the high costs and estimated low demand, Staff makes the same recommendation as its recommendation for Faith.

***Companies that should be granted a suspension until May 24, 2005.***

***Armour/Bridgewater/Union***

Armour/Bridgewater/Union's cost witness projected an LNP cost of \$1.44 per line per month. WWC projected \$1.15 cost per line per month. WWC Exhibit 15 Armour/Bridgewater/Union projected 60 ports per year and WWC estimated 88 ports per year. *Id.* Armour/Bridgewater/Union has a Mitel switch that will lose support in 2007. TR. at 771.

Staff believes that Armour/Bridgewater/Union meets the statutory standards. First, given Armour/Bridgewater/Union's relatively low number of access lines, the number of estimated ports per month is quite low. The parties' estimates for ports range from five to seven ports per month. Staff would be very surprised if the number of actual ports per month will approach the 3% (seven ports per month) level. Second, the cost per line, although less than the previous cases, is still considerable. Third, Staff notes that Armour/Bridgewater/Union has a Mitel switch that will lose support in 2007. Any additional time will allow Armour/Bridgewater/Union to determine what it intends to do regarding its

switch. If Armour/Bridgewater/Union intends to replace the switch, Staff believes that it makes little sense to require Armour/Bridgewater/Union to spend over \$76,000 to upgrade a switch that will be replaced in the near future. As stated earlier, Staff anticipates that by next year there will also be much better numbers regarding demand for LNP based on numbers from other rural areas where LNP has been implemented. In addition, Staff hopes that the outstanding issues will be resolved by the FCC by next year. Therefore, based on all of the factors just listed, Staff recommends that Armour/Bridgewater/Union be granted a suspension until May 24, 2005.

As with the first group of companies, Staff recommends that the companies listed in this second group be required to keep track of all LNP inquiries or requests from its customers. Staff also recommends that the wireless carriers serving these companies also keep track of inquiries or requests.

### ***Roberts County/RC***

Roberts County/RC's cost witness projected an LNP cost of \$1.23 per line per month. WWC projected \$1.05 cost per line per month. WWC at Exhibit 18. Roberts County/RC projected 48 ports per year and WWC estimated 65 ports per year. *Id.*

As with Armour/Bridgewater/Union, this company also has a relatively low number of access lines and the number of estimated ports per month is quite low. The parties' estimates for ports range from four to five and one half ports per month. Again, Staff does not believe that these numbers are realistic. Second, the cost per line, although less than the previous cases, is still considerable. Thus, based on the evidence presented in this case, it is Staff's opinion that Roberts County/RC be granted a suspension until May 24, 2005.

### ***Beresford***

WWC's and Beresford's cost witnesses projected very similar LNP costs with Beresford estimating an LNP cost of \$1.27 per line per month and WWC coming in at \$1.22. WWC Exhibit 18. Beresford projected 36 ports per year and WWC estimated 43 ports per year. *Id.*

Once again, an examination of the facts presented in this case leads Staff to recommend that Beresford be granted a suspension until May 24, 2005. Porting estimates range from three to a mere three and one half per month and per line costs are still considerable.

### ***McCook***

McCook's cost witness projected an LNP cost of \$1.66 per line per month. WWC projected \$0.84 cost per line per month. WWC Exhibit 15. McCook projected 48 ports per year and WWC estimated 70 ports per year. *Id.*

Unlike the previous case, this case has a significant cost difference between the parties' estimated per line costs. The most significant difference in estimates concerns "other internal costs." McCook estimated \$41,316, while WWC estimated \$15,000. Williams' estimate of \$15,000 was used for each company. TR. at 934. He stated that this cost was based on his involvement with the process of establishing LNP. TR. at 935-36. Bullock's calculation was based on his estimation of the number of hours required to analyze and fill out forms to facilitate porting to wireless carriers. TR. at 851. Since Bullock's calculations appear to be more company specific, Staff would expect that these costs will probably fall closer to Bullock's estimates.

Another significant cost difference concerned switch upgrade costs. McCook used \$26,400 and Western Wireless estimated \$17,152. Western Wireless' estimate was based on McCook's original estimate. TR. at 934. Bullock's revised estimate was based on "the pricing policies of the individual switch manufacturers that the telephone companies utilize in their networks" and information from the companies. TR. at 849. Staff finds that Bullock's numbers are more reliable since the numbers are based on the company's actual switches. Thus, Staff believes that the per line number would be closer to McCook's number of \$1.66 per line.

Once again, an examination of the facts presented in this case leads Staff to recommend that McCook be granted a suspension until May 24, 2005. Porting estimates range from four per month to almost five per month. Staff believes that the per line costs and the low ports (which Staff believes are probably overstated) allows the Commission to grant the suspension.

### ***West River***

West River's cost witness projected an LNP cost of \$0.93 to \$1.04 per line per month. ITC Exhibit 4B. WWC projected costs of \$1.17 to \$1.31 per line per month. WWC Exhibit 9. West River projected one port per year and WWC estimated 121 ports per year. ITC Exhibit 4B; WWC Exhibit 9.

WWC is estimating 10 ports per month. Staff believes that WWC's estimate of over 3.2% of access lines porting per year is too high. A more realistic number would be 54 ports per year, or 4.5 per month. Thus, for the same reasons as the previous cases, Staff recommends that West River be granted a suspension until May 24, 2005.

## **Valley**

Valley's cost witness projected an LNP cost of \$0.67 per line per month. Valley Exhibit 3. WWC projected costs of \$0.63 per line per month. WWC Exhibit 15. Valley projected 60 ports per year and WWC estimated 112 ports per year. Valley Exhibit 3; WWC Exhibit 15. Although the cost witnesses differed on some costs, as can be seen, the cost differences did not amount to much.

Since the estimated per line costs were almost the same, Staff will look at the porting estimates. Steve Olesen, Valley's manager, testified that Valley currently has 25% or less cellular coverage. TR. at 740-41. Olesen also testified that his customers had complained about the lack of cellular coverage and he had no indication from the cellular companies that service would improve in the near future. TR. at 752. As stated earlier, WWC's witness, Williams, stated that WWC's porting estimates were "based on what we thought we would be able to obtain as a result of both *our coverage* and our view of what their demographic represented." TR. at 1031 (emphasis added).

However, despite the lack of coverage for Valley, Williams *still* estimated that a little over 3% of Valley's access lines would be ported each year. Staff finds it hard to believe that porting demand will exceed three percent in an area with this type of cellular coverage. Thus, although the costs for implementing LNP are less than the previous cases we have analyzed thus far, Staff believes requiring implementation of LNP in an area that has 25% or less cellular coverage is not in the public interest and recommends a suspension until May 24, 2005.<sup>9</sup>

---

<sup>9</sup> Staff notes that although Midcontinent intervened in this case, Midcontinent is not providing service in Valley's service area.

### ***Midstate***

Midstate's cost witness projected an LNP cost of \$1.00 per line per month. WWC projected costs of \$0.54 per line per month. WWC Exhibit 18. Midstate projected zero ports per year and WWC estimated 143 ports per year. *Id.*

With respect to projected costs, one of the major differences concerned switch upgrade costs. At the hearing Midstate's cost witness changed the switch upgrade cost to \$65,000, which lowered the per line cost to \$0.92. Western Wireless asserted that \$25,000 was the appropriate cost. WWC Exhibit 18. Staff believes that WWC's lower estimate is based on a misunderstanding of a per-line cost quote from Nortel. TR. at 1038-1039. Staff believes that Midstate's projected cost for the switch upgrade is more accurate.

Porting estimates ranged from zero to almost 12 per month. Again, Staff finds that using 3% of access lines (12 per month) as an estimate for demand is too high.

Staff recognizes that this case, along with the next cases, pose a closer question on whether LNP suspension should be granted. Staff is recommending suspension for these cases because Staff believes that given the low number of ports expected and the costs, it is not in the public interest to require immediate implementation of LNP. As stated previously, a suspension until May 24, 2005, should help to clarify costs, routing responsibilities, and will allow the Commission to more accurately determine the actual demand for porting. Thus, Staff recommends that Midstate be granted a suspension until May 24, 2005.

### ***Sioux Valley***

Sioux Valley's cost witness projected an LNP cost of \$0.71 per line per month. WWC projected costs of \$0.62 per line per month. WWC Exhibit 15. Sioux Valley projected 120 ports per year and WWC estimated 177 ports per year. *Id.* Given the less than ten cents difference in the parties' cost estimates, Staff will not attempt to analyze the slight cost differences.

Staff would estimate that ports per month might be closer to seven per month or lower. Based on the same rationale as the previous case, Staff recommends granting Sioux Valley's request for suspension until May 24, 2005.

### ***Santel***

Santel's cost witness projected an LNP cost of \$0.78 to \$0.87 per line per month. ITC Exhibit 4B. WWC projected costs of \$0.73 to \$0.82 per line per month. WWC Exhibit 19. Santel projected one port per year and WWC estimated 155 ports per year. ITC Exhibit 4B; WWC Exhibit 19. Staff would just note that one of the differences in costs concerns service order administration costs. Santel's cost witness used the more costly automated SOA based on the uncertainty regarding whether the porting interval will be shortened. TR. at 222-23. Staff believes that this is an example of why allowing for a suspension may result in more accurate cost estimates. If the FCC were to decide the porting interval question, then the company will be better able to evaluate what type of service order administration is necessary.

Porting estimates ranged from one to over 12 per month. Again, Staff believes that Western Wireless' estimate is too high given that it is based on 3.2% of Santel's access lines. Staff believes that it would be more reasonable to expect six per month or even

lower. Based on the same rationale as the previous case, Staff recommends granting Santel's request for suspension until May 24, 2005.

***Companies that should be denied a suspension.***

***Brookings***

Brookings' cost witness projected an LNP cost of \$0.74 to \$0.83 per line per month. ITC Exhibit 4B. WWC projected costs of \$0.68 to \$0.76 per line per month. WWC Exhibit 9. Brookings projected 48 ports per year and WWC estimated 496 ports per year. ITC Exhibit 4B; WWC Exhibit 9. Given the relatively small difference in the cost estimates, Staff will not explore these costs any further.

Staff finds that it is in the public interest to deny suspension when the costs are balanced along with a higher expected level of demand than the other cases. Brookings is a significantly larger company than the other companies that have been discussed thus far. Staff does not believe that demand for porting will reach 3%, especially in the first few years. However, cutting that number in half and using 1.5% of Brookings' access lines as an estimate of demand would result in over 210 ports per year, or over 17 ports per month. In addition, Staff notes that Brookings' wireless company is LNP capable. Therefore, Staff believes that it is in the public interest to deny Brookings request for suspension.

***ITC***

ITC's cost witness projected an LNP cost of \$0.54 to \$0.61 per line per month. ITC Exhibit 4B. WWC projected costs of \$0.55 to \$0.62 per line per month. WWC Exhibit 9. ITC projected 24 ports per year and WWC estimated 453 ports per year. Given the nearly identical cost estimates, Staff will not attempt to analyze any of the cost differences.

As with Brookings, Staff finds it is in the public interest to deny suspension when these costs are reviewed in conjunction with a higher level of estimated demand. Using a 1.5% estimate for demand, ITC could expect to port around 218 numbers per year, or over 18 per month. And, in ITC's case, the demand could certainly be higher given Midcontinent's entry into parts of ITC's service area. Thus, Staff believes that it is in the public interest to deny ITC's request for suspension.

### ***Venture***

Venture's cost witness projected an LNP cost of \$0.55 to \$0.61 per line per month. ITC Exhibit 4B. WWC projected costs of \$0.53 to \$0.59 per line per month. WWC Exhibit 9. Venture projected 24 ports per year and WWC estimated 409 ports per year. ITC Exhibit 4B; WWC Exhibit 9. Again, since there is not much difference in the parties' cost estimates, Staff will not attempt to analyze these minimal cost differences.

As with Brookings and ITC, Staff finds that it is in the public interest to deny suspension when the costs are around \$0.60 and there is a higher expected level of demand. Using 1.5% estimate for demand, Venture could expect to port up to 204 numbers per year, or around 17 per month. Therefore, Staff believes that it is in the public interest to deny Venture's request for suspension.

### ***Golden West/Vivian/Kadoka***

Golden West/Vivian/Kadoka's cost witness projected an LNP cost of \$0.32 per line per month. Golden West Exhibit 3. WWC projected costs of \$0.35 per line per month. WWC Exhibit 15. Golden West/Vivian/Kadoka projected 240 ports per year and WWC estimated 1076 ports per year. WWC Exhibit 15.

By choosing to combine the three companies, the monthly costs are the lowest of all the Petitioners and the expected porting demand is the highest. Staff finds that it is not in the public interest to grant a suspension when the costs are this low and there is a higher expected level of demand. Using 1.5% estimate for demand, Golden West/Vivian/Kadoka could expect to port up to 588 numbers per year, or around 49 per month. Staff believes that it is in the public interest to deny Golden West/Vivian/Kadoka's request for suspension.

### ***Alliance/Splitrock***

Alliance/Splitrock's cost witness projected an LNP cost of \$0.79 per line per month, which was reduced at the hearing to around \$0.73. Alliance Exhibit 3. WWC projected costs of \$0.47 per line per month. WWC Exhibit 15. Alliance/Splitrock projected 180 ports per year and WWC estimated 293 ports per year. WWC Exhibit 15.

One of the major cost differences concerned switch upgrade costs. It is Staff's position that the switch upgrade costs as set forth by Alliance/Splitrock at the hearings are more accurate than Western Wireless. Alliance/Splitrock's estimate is based on the actual number of equipped lines in the DMS-10 switches for Alliance and Splitrock. TR. at 836.

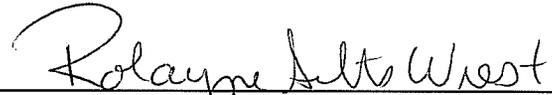

Staff finds that this case poses a closer question of whether a suspension should be granted. However, using 1.5% estimate for demand, Alliance/Splitrock could expect to port up to 147 numbers per year, or over 12 per month. Thus, Staff believes that it is in the public interest to deny Alliance/Splitrock's request for suspension.

### **CONCLUSION**

Staff has attempted to conduct a company specific analysis in order to arrive at reasonable recommendations that are consistent with the facts of each case and the legal

standards. Admittedly, some of the cases presented a much clearer picture as to whether a suspension should be granted than other cases. However, Staff hopes that its analysis will give the Commission some guidance in making its decisions for these cases.

## STATEMENT OF THE ISSUE

Whether the South Dakota consumers living within the areas served by petitioning local exchange carriers (hereinafter “LEC”s) will receive the right to port their numbers as the remaining South Dakota citizens are allowed to do today.

## PROCEDURAL HISTORY

In 1996, Congress enacted the Telecommunications Act of 1996 (hereinafter the “Act”). This Act was intended to effectuate comprehensive changes to the 1934 Telecommunications Act. Pub.L. 104-104, 110 Stat. 56 (codified as amended in sections of Title 47, United States Code). The 1996 Act’s primary purpose, “...was to reduce regulation and encourage the rapid deployment of new telecommunications technology.” Reno v. American Civil Liberties Union, 521 U.S. 844, 857-58 (1997). Moreover, the Court noted that many of the provisions found in the Act were intended to, “promote competition in the local telephone service market, the multi-channel video market, and the market for over-the-air broadcasting.” Id.; *See Also* Implementation of the Local Competition Provisions of the Telecommunications Act of 1996, CC Docket No. 96-98, first Report and Order, 11 F.C.C.R. 15499, FCC 96-325 (1996).

The provision of the Act that is relevant to this matter is Intermodal Portability, Section 251(b) of the 1934 Telecommunications Act as amended by the 1996 Act. 47 U.S.C. § 251(b). Section 251(b), “... requires LECs to provide local number portability (LNP), to the extent technically feasible, in accordance with the requirements prescribed by the Commission.” 47 U.S.C. § 251 (b)(2); In the Matter of Telephone Number Portability, CC Docket No. 96-98, Order, 19 F.C.C.R. 875 (2004). Congress required LNP because it determined LNP was necessary to enhance competition between wireless and wireline carriers. Id. at 876.

The Federal Communications Commission (“FCC”) initially designated November 24, 2003 as the date when carriers in the top 100 metropolitan statistical areas (“MSA”s) must be

capable of LNP. Id. The FCC extended this requirement for LECs that operate in an area with less than two percent of the nation's subscriber lines until the later of May 24, 2004 or six months after receiving a request for LNP. Id.

In addition, the 1996 Act also provides rural carriers with fewer than two percent of the nation's subscriber lines the ability to petition the State commission for a suspension or modification of the LNP requirements. 47 U.S.C.A. § 251 (f)(2). It is undisputed that the Petitioning parties constitute "rural carriers" under § 251 (f)(2).

On February 12, 2004, Kennebec Telephone Company petitioned the Public Utilities Commission of the State of South Dakota (hereinafter "Commission") for suspension or modification of the § 251 (b)(2) LNP requirements. Santel Communications Cooperative, Inc. petitioned on February 23, 2004. On March 9, 2004, Armour Independent Telephone Company, Bridewater-Canistota Independent Telephone Company and Union Telephone Company jointly petitioned, Sioux Valley Telephone Company individually petitioned, and Golden West Telecommunications Cooperative, Inc., Vivian Telephone Company and Kadoka Telephone Company jointly petitioned. During March 10-17, 2004, the following companies filed individual petitions: Brookings Municipal Utilities d/b/a Swiftel Communication, Beresford Municipal Telephone Company, McCook Cooperative Telephone Company, The City of Faith Telephone Company, Midstate Communications, Inc., Interstate Telecommunications Cooperative, Inc., Valley Telecom Coop. Assoc., Venture Communications Coop., Western Telephone Company, and West River Coop. Telephone. On March 15, 2004, Alliance Communications Inc. and Splitrock Properties Inc. jointly petitioned, RC Communications, Inc. and Roberts County Telephone Cooperative Assn. jointly petitioned, and Stockholm-Strandburg Telephone Company individually petitioned.

On March 29, 2004, WWC License LLC, doing business as CellularOne (hereinafter “Western Wireless”) petitioned to intervene in the above referenced actions. After Western Wireless filed its petition to intervene, James Valley Cooperative Telephone Company, Tri-County Telecom and Cheyenne River Sioux Tribe Telephone Authority individually petitioned on April 13, 2004 and April 23, 2004 respectively. Western Wireless subsequently filed similar petitions to intervene in those actions and the Commission allowed intervention.

On April 19, 2004, the Commission issued an Order Granting Interim Suspension Pending Final Decision and an Order Granting Intervention. The hearing for all previously referenced Petitioners commenced on June 21, 2004. During this hearing, the burden of proof was appropriately placed upon each rural carrier to demonstrate it is entitled to a suspension or modification of the LNP requirements.<sup>1</sup> See Implementation of the Local Competition Provisions of the Telecommunications Act of 1996, CC Docket No. 96-98, first Report and Order, 11 F.C.C.R. 15499, 15518, FCC 96-325 (1996).

During the course of the hearing, James Valley Telephone reached a stipulated settlement agreement with Western Wireless. Cheyenne River Sioux Tribe Telephone Authority also reached a settlement agreement with Western Wireless but remains part of the action to the extent that the decision may impact future transport obligations.

### **FACTUAL BACKGROUND**

Throughout this brief, cites to the transcripts will be cited as “TR, Page \_\_\_, Lines \_\_\_.” Cites to prefiled testimony will be given setting forth the name of the witness, whether the citation is to direct or rebuttal prefiled testimony and a page number.

---

<sup>1</sup> The 8<sup>th</sup> Circuit Court of Appeals has considered which party burden is appropriately placed upon under § 251(f) and it concluded that burden is appropriately placed upon the petitioning party. Iowa Utilities Board v. Federal Communications Commission, 219 F.3d 744, 761 (8th Cir. 2000), *reversed in part on other grounds by Verizon Communications Inc. v. Fed’l Communications Comm’n*, 535 U.S. 467 (2002).

Mr. Williams, testifying on behalf of Western Wireless, explained that Petitioners had two obligations related to LNP. One was to perform updates to their switches to be able to port out numbers from their customers. The second was to update their networks to permit customers to call ported numbers. TR, Page 555, Lines 12-16. The second obligation is not an obligation that can be suspended or modified by the Commission. The first obligation does fall within the jurisdiction of the Commission. Id.

The obligation of LNP is not a new requirement. Rather, it is a long-term plan under the federal law. Mr. Williams testified that the FCC clarified issues and deadlines for implementing LNP in its November Order of 2003. TR, Page 556, Lines 1-11.

In presenting the factual evidence that Petitioners claimed would support modification or suspension of their obligations to provide LNP, the Petitioners for the most part followed a standard format. Each Petitioner presented cost testimony through one of four cost experts. Most Petitioners then also had a company representative testify. The following delineates the various evidence introduced, and the issues surrounding that evidence.

#### **I. Consumer Demand.**

With the exception of Kennebec Telephone Company, no Petitioner did any survey of their customer base as to whether they desired LNP or what they were willing to pay for LNP. Additionally, while company representatives may have generally testified concerning their customer base, no Petitioner presented any documentary evidence or any testimonial evidence actually providing such things as the average household income or any other demographic information regarding their customer base.

In the case of Kennebec, the Kennebec manager did testify that he had commissioned a survey. Mailings were sent to their customers who were asked to fill the survey out and mail it back. Bowar Direct, Page 1. Even using this unscientific poll, approximately twelve percent of

the customer base was willing to pay over \$1.00 per month to have the opportunity to port their landline number to wireless. Bowar Direct, Page 3.

Ron Williams, of Western Wireless, also talked about the desire for local number portability. In response to Commissioner's questions, he explained how people identify and are "invested in their land line phone number." TR, Page 619, Lines 8-14. Further, he explained how Congress intended LNP to be a universal feature available throughout the country. As a universal feature, it eliminates any "costs causer" argument because a person moving from one provider to another pays for LNP at his/her new carrier. TR, Page 621, Lines 5-6.

Mr. Williams provided two surveys showing the interest in the ability to use a cellular phone as a primary phone. *See* Western Wireless Hearing Exhibits 11 and 14. The survey done by Western Wireless covers rural areas that it serves, including South Dakota. *See* Western Wireless Exhibit 11. That exhibit showed 16 percent of people eventually replacing their land line phone and 25 percent unsure whether they would replace their land line phone. *Id.* Mr. Williams explained in response to Commissioner Berg's questions that wireline to wireless migration facilitated by local number portability has been predicted anywhere from three percent to as high as 50 percent. TR, Page 645, Lines 7-14. However, Western Wireless' experience has been approximately three percent per year migration. TR, Page 645, Lines 15-19.

## **II. Cost Analysis.**

In regard to the cost of LNP, on behalf of the Petitioners, four cost experts testified. These cost experts were John DeWitte, Tom Bullock, Dan Davis and Douglas Neff.<sup>2</sup> They presented three different ways to provide LNP. Intervenor, Western Wireless, presented a witness, Ron Williams, to provide cost analysis testimony. Although, Mr. Williams questioned

---

<sup>2</sup> Mr. Neff's cost analysis was only done on behalf of Cheyenne River Sioux Tribe Telephone Authority. He predicted LNP cost per access line at \$.70 monthly without transport and \$2.46 per month with transport costs. Because Cheyenne River Sioux Tribe Telephone Authority agreed to begin providing LNP pursuant to a stipulated settlement, Mr. Neff's analysis will not be addressed further in this brief.

the legitimacy of some of the numbers Petitioners presented, he still used those numbers in his cost analysis.

In regard to economic burden, none of the Petitioners have taken the position that they could not afford to implement LNP, even at the costs submitted by the Petitioners' experts. TR, Page 558, Lines 5-14. Rather, Petitioners acknowledged that they have the ability to pay for LNP and to recover their investment in LNP through the LNP surcharge. TR, Page 558, Lines 15-18; TR Pages 89, 92, 313, 346, 378-379, 438-439, 742, 784-785, 816, 829, 953-954, 973, 984, 1047 and 1101. Further, a number of the Petitioners' company representatives acknowledged that these LNP surcharges would also, to the extent allowable, be included in submissions for USAC funding. Id.

While Petitioners' cost witnesses differed on how to provide LNP, all Petitioners' cost experts agreed that they only considered one way to provide LNP. They restricted their review on how to provide LNP to methods already contained within existing interconnection agreements. *See* TR, Pages 857, 997. They did this even though they acknowledged that the FCC has specifically stated that transport agreements are not required to provide LNP. *See* DeWitte ITC Direct Prefiled Testimony, Page 6, Lines 19-21; TR, Page 857, Lines 1-3. On the other hand, Williams submitted a lower cost alternative which was not restricted to existing interconnection agreements.

Because the Petitioners' cost experts required that their structure for providing LNP be subject to existing interconnection agreements, they as a whole, without analysis, rejected Western Wireless' proposed method for facilitating LNP. TR, Page 177; Page 997, Lines 13-15. Still, it was pointed out during the hearing that in Minnesota, rural LECs had jointly petitioned the Minnesota Public Utilities Commission proposing the same method being proposed by Western Wireless for facilitating LNP. The Minnesota rural LECs stated that LNP, "can be

accomplished efficiently and cost effectively,” under such a method. Hearing Exhibit 6, Page 5. Further, the rural LECs of Minnesota referred to such method of providing LNP as an “eminently reasonable solution of making use of the very same facilities used by the CMRS providers to deliver traffic to [rural LECs].” *Id.* at page 10. Regardless, Petitioners continued to reject Western Wireless’ proposal.

**A. Cost testimony proffered by Mr. DeWitte.**

The first cost expert to testify was Mr. DeWitte. Mr. DeWitte is employed by Vantage Point Solutions, Inc. He testified on behalf of Swiftel Communications, Interstate Telecommunications Cooperative, James Valley Cooperative Telephone Company, Santel Communications, Stockholm-Strandburg Telephone Company, Venture Communications Cooperative and West River Cooperative Telephone Company. Notably, Mr. DeWitte’s analysis on the costs changed every time he submitted testimony. His final cost analysis is contained in ITC Hearing Exhibit 4B.

Mr. DeWitte told the Commission the way to provide LNP is to provide a DS1 connection between every wireless carrier to every end and host office, essentially every exchange, of each Petitioner. Mr. DeWitte’s plan for Interstate is graphically illustrated by Western Wireless Exhibit 5. Based on this proposal, Mr. DeWitte assumed six CMRS carriers or wireless carriers would require DS1 lines to all twenty-four Interstate Telecom end or host offices. He then priced each DS1 line at \$4,000. *See* DeWitte Prefiled Direct, Page 13, Lines 7-23. After accounting for any pre-existing Points of Interconnection (“POI”), his one-time nonrecurring transport cost for Interstate is \$560,000. *See* ITC Exhibit 4B.

Although Mr. DeWitte admitted the traffic over these POIs would be minimal, he testified minimum monthly recurring charges for each line would be \$1,150 per month. *See*

DeWitte Prefiled Direct, Page 13, Line 21. This resulted in a final monthly reoccurring transport cost of \$153,069. *See* ITC Exhibit 4B.

Mr. DeWitte further admitted that when coming up with these calculations, he projected future wireless carriers coming into the market, and included those costs. *See* TR, Page 218, Lines 11-17. He even admitted that in the case of some companies, he included POIs for wireless carriers currently doing business in part of the LECs territory, but not having a license to do business in the remaining parts. TR, Page 217, Lines 18-24. Thus, even though no license existed in some cases, he included POIs to exchanges even where carriers were not licensed. His rationale was that some day more wireless carriers *may* come into the area. TR, Page 217, Lines 18-24.

With respect to Interstate, Interstate's corporate representative, acknowledged Interstate was a named party in a proceeding in front of the Minnesota Public Utilities Commission. TR, Page 56. In that proceeding, an entity similar to South Dakota Telecommunications Association ("SDTA"), Minnesota Independent Coalition ("MIC"), had petitioned on behalf of its members for an extension of the time to provide LNP to allow agreements to be reached with Qwest to transport ported numbers. *See* Hearing Exhibit WW6 ("MIC Petition"). Mr. DeWitte admitted that he did not investigate in any way this alternative avenue to provide LNP services. TR, Page 165. Rather, he reiterated that he simply confined his analysis to an approach where interconnection agreements already exist regarding traffic. TR, Page 178, Lines 14-22. Although Mr. DeWitte did admit that the Qwest hardware to make the trunk group two way, as being requested in the Minnesota MIC filing, exists here in South Dakota. TR, Page 163.

Mr. DeWitte contended that he needed to stay with his plan even though his plan was more expensive than that proposed by Western Wireless. In discussions about the monthly

recurring costs dealing with Interstate, he was questioned regarding the large variance between the proposed plans.

Question: Alright. 1,825. And rather than absorbing that cost what Interstate is proposing to do is spend monthly recurring \$157,000 to provide porting; correct?

Answer: Based on the information in the ruling and, you know, all the rules that were in place, yes.

Question: And essentially we could do that same mathematical model for each one of the companies you are testifying for?

Answer: Yes.

TR, Page 283, Lines 10-17. Regarding the installation costs, Vice Chair Hansen inquired of Mr. DeWitte's plan versus how James Valley had solved the transport issue.

Vice Chair Hansen: Thank you. Is it realistic for us to believe that when looking at the \$4,000 option and the \$576,000 option that notwithstanding the recurring costs, etc., it is realistic for us to believe that there are considerably less expensive ways of skinning this cat than the methodology that was shown on 3A?

Mr. DeWitte: I believe there are other options that could be explored.

TR, Page 239, Lines 1-9

As to Mr. DeWitte's other categories of cost beyond transport, such as switch related costs and technical and administrative costs, Mr. DeWitte admitted that he had not calculated in any economies of scale. He assumed each of his clients would bring in their own trainers and not pursue cost sharing arrangements. He did not account for any of the Petitioners working together. TR, Page 154, Lines 1-4, although SDTA has done some of that for their members previously.

As a cost, he assumed such things as a subscriber flyer, costing \$2 per subscriber nonrecurring, and then an additional one dollar per year per subscriber in the future. He based this on printing and mailing costs. *See*, for example, DeWitte Direct Prefiled Testimony in

Interstate, Page 12, Lines 3 – 18. He obtained this information from a third party contact and not the actual companies he represented. He did not consider that the information could be placed in a regular flyer already produced by some of the companies he represented, at a lower cost. For example, one of Interstate's flyers was marked as an exhibit for the hearing. *See* Midcontinent Hearing Exhibit 2. That flyer is sent out by Interstate on a regular basis. The actual publishing cost for that flyer is twenty-five cents, as noted on the flyer, and not the one dollar a piece estimated by Mr. DeWitte. Id.

Additionally, for the flyers, he estimated \$15,000 to come up with the first informational flyer. He assumed that all seven of the Petitioners he was testifying on behalf would pay the \$15,000 to come up with this additional flyer for a total of \$105,000 to be expended by these companies. TR, Page 153, Lines 1-9. He did not make any assumption that these companies could get together to do one informational flyer explaining LNP and spread the cost between them. He assumed all the companies would have to work on their own to do everything. TR, Page 153, Lines 14-24.

**B. Cost Testimony proffered by Mr. Bullock and Mr. Davis.**

Cost experts Bullock and Davis are both employed by TELECOM Consulting Resources, Inc., in Nebraska. *See* Davis Prefiled Direct Testimony, Page 1; Bullock Prefiled Direct Testimony, Page 1. Mr. Bullock testified extensively on how the TELECOM experts had calculated costs.

Mr. Bullock testified that the TELECOM routing provision assumed a necessary T1 circuit be installed between each host or stand alone switch and each wireless carrier currently providing service in an ILECs territory. He further indicated a T1 switch would not be necessary between a host switch and a subtended local tandem switch. TR, Page 868, Lines 15-22. *See* also TR Pages 993-994 (Davis Testimony).

In coming up with his calculations for required T1 lines and monthly recurring transport costs, TELEC simply asked each Petitioner what wireless carriers *might* be doing business in *any* part of their territory. For example, with respect to Golden West, TELEC received the response that five (5) wireless companies provided service somewhere in its area. From there, TELEC made the assumption that these wireless carriers operated throughout the service area, and T1 lines would be needed for every exchange to every wireless carrier. TR, Page 873, Lines 10-14. The companies doing business somewhere in the Golden West area are Verizon, Western, Viaero, Qwest and AT&T. TR, Page 875, Lines 11-13. Based on this, TELEC created a cost analysis assuming the necessity of five (5) T1s for every Golden West exchange, less any already existing POIs. Mr. Bullock admitted TELEC did not investigate or even ask whether any of these wireless companies simply resold services or roamed off of someone else's facilities. TR, Page 875, Line 16. Rather, since Golden West reported five (5) wireless companies doing business somewhere in their area, TELEC assumed five (5) T1s necessary for such sights as Philip, Wall, Pine Ridge and every other Golden West exchange. Bullock did agree that while TELEC had no independent knowledge of any of these wireless carriers or what exchanges they actually operated in, if they were roaming, roaming would not be a direct charge and therefore, there would be no need for a T1. TR, Page 877, Lines 15 – 25; TR, Page 874, Lines 5 – 25.

Moreover, TELEC did not consider any other traffic mechanisms, such as the Western Wireless proposal, because one of TELEC's criteria in coming up with its traffic proposal was that the proposal would be "consistent with existing interconnection agreements." TR, Page 857, Lines 1-3. Additionally, Mr. Bullock took the position that it would be inappropriate to transport through Qwest, although he admitted it would be cheaper, because it would shift the responsibility of transportation outside the local calling area of the LEC. He did agree, in response to a question by Vice Chairman Hansen, that if the wireless company is going to be

responsible for paying the transport costs, the wireless company should be able to choose such a mode of transportation. TR, Page 919, Lines 4-20.

Mr. Davis then testified on behalf of the remaining companies TELECOM was hired to represent including: Beresford Municipal Telephone, Kennebec Telephone, Midstate Communications, RC Communications/Roberts County Telephone and Western Telephone. He stated that exhibit R1 attached to his prefiled rebuttal testimony was the most accurate numbers that he was presenting to the Commission. These numbers range from a low of \$.55, Midstate's LNP cost per line per month excluding transport, to a high of \$3.76, Western's LNP cost per month including transport. Exhibit R1 of Davis Rebuttal.

During cross examination at the hearing, Mr. Davis confirmed that LNP was technically feasible. TR, Page 997, Lines 6-10. He only contended that the Western Wireless proposal was technically infeasible because it did not follow the existing interconnection agreements. TR Page 997, Lines 11-15.

In addition to estimating standard costs related to LNP, with respect to in at least two of the companies, Mr. Davis also included significant switch upgrades. On behalf of Kennebec, he included a switch upgrade to a platform that could then support LNP. TR, Page 999. He acknowledged that companies regularly upgrade switches, (TR, Page 1000), but that he did not bother to ask Kennebec when it had this switch scheduled for an upgrade. Id. As to Kennebec alone upgrade cost was estimated to be \$37,400. This amount is continued in Mr. Davis' switch upgrade costs under Kennebec. He did not bother to ask Kennebec what other services it would derive from the upgrade or how it impacted their need to upgrade the switch anytime in the future. TR, Page 999, Lines 24-25 and Page 1000, Lines 16-18.

He also included a similar non LNP upgrade for Western Telephone. The upgrade to the host switch was \$76,795 of his projected costs for Western Telephone's switch upgrade costs.

As with Kennebec, he did not ask Western Telephone if it obtained any other services based on this upgrade. TR, Page 1009, Lines 3-6. Further, Mr. Davis did not ask Western Telephone whether it already had this upgrade planned. Id. at Lines 7-9.

Like Mr. Bullock, Mr. Davis acknowledged that TELECOM did not assume any economics of scale that would occur if the companies they were testifying on behalf jointly negotiated agreements, or provide training with other companies. TR, Page 1007, Lines 12-20.

**C. Cost Testimony proffered by Mr. Williams.**

Ron Williams, testifying on behalf of Western Wireless, addressed the costs submitted by Petitioners and the subsequent public policy issues. Western Wireless Hearing Exhibits 9 and 19 present its cost analysis regarding Mr. DeWitte's companies. Western Wireless Hearing Exhibit 15 presents its costs information for the companies Mr. Bullock provided testimony. Western Wireless Hearing Exhibit 18 provides the cost information regarding the companies Mr. Davis testified.

Regarding the mechanism recommended by the Petitioners' cost experts to provide LNP service, Mr. Williams made it clear that the existing facilities should be maximized to save the Petitioners' money. Mr. Williams noted it was unnecessary and unreasonable to build an entire specialized infrastructure for LNP service when existing facilities could handle the service. TR, Pages 579 and 734. Mr. Williams presented a cost analysis using a reasonable and efficient mechanism. TR, Page 579. Id. See also Western Wireless Exhibits 9, 15, 18 and 19. While Mr. Williams used some of the estimates made by Petitioners cost experts, he questioned a number of them as being too high. Williams has experience in providing LNP and has noted that even beyond transport costs, Petitioners' costs seemed excessive. TR, Page 560.

The proposal by Western Wireless to use the Qwest tandem is low cost and can be quickly accomplished. Williams noted that in the MIC petition, Qwest had filed comments in

Minnesota wherein it said it could provide such a service within three weeks. TR, Page 631, Lines 22-25; TR, Page 699, Lines 1-9. *See* Western Wireless Hearing Exhibit 14, Page 2 of comments. Additionally, Qwest stated its desire to provide a transit service similar to the rural LECs in Minnesota. *Id.* The entire debate in Minnesota between the MIC RLECs and Qwest was whether Qwest would charge \$.0089 per minute or, the charge MIC RLECs wanted \$.00164 per minute use. *See* Western Wireless Exhibit 6, Page 6 of petition

Under examination by the Commission, Mr. Williams stated Western Wireless' LNP monthly surcharge is approximately \$.85 to its users. TR, Page 679, Lines 17-20.

The Commission expressed concerns about whether this is a situation where the cost causer was not paying the expense for the service. In response, Williams explained that when the FCC established the mechanism for providing LNP it envisioned every company charging for LNP use. TR, Page 561, Lines 1-8; TR, Page 621, Lines 2-20. Because of this, someone porting from a rural LECs may be causing costs to the rural LEC but the individual would pay the cost to the new provider. Thus, the cost becomes "socialized" over all companies with all users paying for LNP. *Id.*

### **III. Joint Filings.**

Mr. Bullock did not provide individual cost testimony for each Petitioner he represented. Rather, Mr. Bullock provided combined financial information for various companies. Specifically, Armour Independent Telephone Company, Bridgewater-Canistota Independent Telephone Company and Union Telephone Company applied for suspension or modification in one petition. Bullock then provided the financial information in one document incorporating all three companies together. *See* Bullock Prefiled Rebuttal Testimony, Exhibit R-1-TB. Similarly, Golden West Telecommunications Cooperative, Inc., Vivian Telephone Company and Kadoka Telephone Company filed a joint petition. Bullock merged all of their financial information

together and provided one set of numbers. Id. No breakdown for these individual companies was provided at the hearing nor does it appear in the record.

Commission staff inquired why the companies did not file separate studies as required by the Commission at its April 6, 2004 meeting. TR, Page 791, Lines 2-5. In response to staff's question, the corporate representative merely acknowledged that nothing in the record shows separate costs for any of these companies. TR, Page 792, Lines 17-19.

It was noted that there was no evidence presented by any of the Petitioners that any of the policy issues being represented were unique to these Petitioners. Rather, the policy arguments appear to be a general argument against LNP. TR, Page 557, Lines 1-7.

#### **IV. Public Policy.**

Petitioners submitted the testimony of Steven Watkins to address public policy. Mr. Watkins testified under cross examination at the hearing that his opinions were all general in nature and thereby not specific to any Petitioner. Further, he did not perform an independent evaluation of any of the Petitioners. Consequently, he offered no differentiation amongst any of the Petitioners, nor had he investigated any of the Petitioners' clientele. TR, Page 509, Lines 1-10.

Primarily, Mr. Watkins' testimony centered on his complaint that the FCC had not provided enough guidance or rules regarding how LNP should be implemented. TR, Pages 500-502. Additionally, he argued that there was no evidence of a demand for LNP. It appears he based this on the fact that he saw no "anecdotal experience" of LNP demand. TR, Page 499, Lines 2-3.

As to public policy concerns, Williams pointed out that these types of services are being demanded in rural America. TR, Page 693, Lines 19; TR, Page 692, Line 21. *See also* Western Wireless Hearing Exhibit 11 and 13. Further, the people of rural America are asking for the

same types of services that are being offered in metropolitan areas. Id. Regarding the actual migration given LNP, Williams pointed out that some forecasts had ranged from three to as much as 50 percent. TR, Page 645, Lines 13-14. Western Wireless had been experiencing approximately three percent migration per year in competitive markets where LNP had been implemented. TR, Page 624, Lines 15-19. This would amount to a 15 percent migration over a five year period.

Williams did concede some that of the Petitioners who will incur low numbers of envisioned ports and higher costs should be given additional time to become LNP compliant. To that end, he agreed that Kennebec, City of Faith, Western, Stockholm and Tri-County, all being approximately \$2 or over under Western Wireless' projections, should be granted more time to transition into LNP. He therefore acknowledged suspension for these entities until the end of March, 2005, would be appropriate. TR, Page 622, Lines 19-25; TR, Page 661.

## ARGUMENT

- I. Each Petitioner Bears the Burden of Proving that it is entitled to a suspension or modification of LNP by either proving (1) that such a suspension or modification is necessary to avoid a significant adverse economic impact, avoid imposing an undue economical burden, or avoid imposing a requirement that is technically infeasible; and, (2) proving that as to the Petitioner, providing this LNP is not consistent with the public interest, convenience and necessity.**

Section 251(b)(2) requires all local exchange carriers provide LNP, to the extent technically feasible, in accordance with the requirements of the Commission. 47 U.S.C. § 251(b)(2). Section 251(f)(2) provides local exchange carriers with fewer than two percent of the Nation's subscriber lines the ability to petition the State Commission for a suspension or modification of the LNP requirements found in § 251(b). It states,

A local exchange carrier with fewer than 2 percent of the Nation's subscriber lines installed in the aggregate nationwide may petition a State commission for a suspension or modification of the application of a requirement or requirements of subsection (b) or (c) of this section to telephone exchange service facilities specified in such petition. The State commission shall grant such petition to the

extent that, and for such duration as, the State commission determines that such suspension or modification –

(A) is necessary –

- (i) to avoid a significant adverse economic impact on users of telecommunications services generally;
- (ii) to avoid imposing a requirement that is unduly economically burdensome; or
- (iii) to avoid imposing a requirement that is technically infeasible; and

(B) is consistent with the public interest, convenience, and necessity.

The State commission shall act upon any petition filed under this paragraph within 180 days after receiving such petition. Pending such action, the State commission may suspend enforcement of the requirement or requirements to which the petition applies with respect to the petitioning carrier or carriers.

47 U.S.C. § 251(f)(2). In 1998, South Dakota promulgated S.D.C.L. § 49-31-80, which adopted the requirements set forth in 47 U.S.C. § 251(f)(2). Under both, the party filing the petition bears the burden of establishing the above required factors. Iowa Utilities Board, 219 F.3d at 761.

The statute clearly requires the finding of two elements. First, the Commission must find that it is necessary to grant a modification or suspension to avoid one of the three factors enumerated under 47 U.S.C. § 251(f)(2)(A). In addition then, the Commission must find that such a suspension or modification is also consistent with the public interest, convenience, and necessity. It must be noted that the Commission’s power is limited to only granting a suspension or modification to the extent “necessary” to avoid one of the enumerated three factors.

Moreover, the Commission is under no obligation to grant a suspension or modification under § 251(f)(2) at all. The Commission should not grant each individual Petitioner’s request for suspension or modification unless that Petitioner demonstrates suspension or modification is necessary due to the existence of one of the above factors, and that such suspension or modification is consistent with the public interest. 47 U.S.C. § 251(f)(2). “In seeking an extension of the LNP deployment deadline, a carrier must provide substantial, credible evidence to support its contention that it is unable to comply with the deployment schedule.” In the Matter

of Telephone Number Portability Petition of the North-Eastern Pennsylvania Telephone Company for Temporary Waiver of its Porting Obligations, Order, 2004 WL 1066289, CC Docket No. 95-116, DA 04-1312 (*citing* 47 C.F.R. §§ 52.23(e) and 52.31(d)). “All of these determinations require an affirmative act and technical findings by the State commission before a decision may be reached.” Indiana Bell Telephone Company Incorporated v. Smithville Telephone Company, Inc., 31 F.Supp.2d 628, 632 (S.D.Ind. 1998) (*citing* 47 U.S.C. § 251(f)). Denial is the appropriate course of action if the requirements set forth in § 251(f)(2) are not satisfied. 47 U.S.C. § 251(f)(2).

Congress granted the states the authority to determine what is necessary to demonstrate the existence of the requirements of § 251(f)(2). To do so, the Commission must ensure its’ interpretation is consistent Congress’ intent supporting the promulgation of the statute. Indiana Bell Telephone Company Incorporated, 31 F.Supp.2d at 636-37 (*citing* Ingersoll-Rand Co. v. McClendon, 498 U.S. 133, 138 (1990)). In discerning intent, it is proper to consider the statutory framework as a whole and the objectives of the statute. Indiana Bell Telephone Company Incorporated, 31 F.Supp.2d at 637 (*citing* Crandon v. U.S., 494 U.S. 152, 158 (1990)). It is further proper for the Commission to rely upon guidance promulgated by the FCC, the agency tasked with implementation of the Act. Iowa Utilities Board, 219 F.3d at 748 (*citing* Chevron U.S.A. Inc. v. Natural Resources Defense Council, Inc., 467 U.S. 837, 842-43 (1984)).

In determining whether a petitioner has met its burden of establishing the need for a waiver of modification under 47 U.S.C. § 251(f)(2), the Commission must examine each Petitioners case individually. The text of § 251(f)(2) refers to, “A local exchange carrier....” Thus, the plain meaning of the statute requires that each individual Petitioner demonstrate the existence of the above factors before a suspension or modification can be granted under § 251(f)(2).

In conformance with the plain meaning of the statute, the North Carolina Utilities Commission has rejected joint submissions. In the Matter of Petition by the Alliance of North Carolina Independent Telephone Companies for Limited Modification of the Requirement to Provide Number Portability, Docket No. P-100, Sub 133r, State of North Carolina Utilities Commission Raleigh, (2003). It held,

While the Commission knows of no problem with the Alliance bringing these claims on behalf of its members, it would appear necessary for each *individual company* in the Alliance which wishes to benefit from this exemption to provide data showing that in fact the exemption is necessary for it to avoid significant adverse economic impact on users generally, to avoid imposing a requirement that is unduly economically burdensome, or to avoid imposing a requirement that is technically infeasible. Unfortunately, the Alliance's Petition contained no such individual data; instead the Alliance appears to argue that *any* imposition of what it believes to be a wrongful obligation *ipso facto* meets those tests. The Commission believes that Section 251(f)(2) requires more than this, especially since the proceeding must be concluded within 180 days of receiving the Petition.

*Id.* (emphasis in original). Consequently, under the plain meaning of § 251(f)(2), the Commission should reject all joint petitions that fail to delineate company specific data.

**A. 47 U.S.C. §251(f)(2)(A) requires that each Petitioner prove that action of the Commission is "necessary."**

Under 47 U.S.C. §251(f)(2)(A), the burden is upon the Petitioner to prove the existence of one of three factors which would justify a suspension or modification. The statute only authorizes the Commission's action if the action is necessary to avoid one of these three events. The term "necessary" needs to be read in context with the statute. Cellular Telecommunications and Internet Association v. Federal Communications Commission, 330 F.3d, 502, 510 (US App. D.C. 2003). See also AT&T Corporation v. Iowa Utilities Board, 525 U.S. 366, 388-89 (199).

The Eighth Circuit has already interpreted the term necessary under § 251. Iowa Utilities Board, 291 F.3d at 761. It indicated a formal interpretation of the term was intended. *Id.* In the context of this statute, "necessary" clearly should be read to require the Commission's action only if Petitioners cannot avoid one of the circumstances. Because the Commission action has to

be necessary, logically, the Commission must only order a suspension of the minimum length or the minimum modification to resolve the issue. Obviously, if a Petitioner purposely arranges for one of these three events to occur, it is not necessary for the Commission to act to avoid one of these events because Petitioner has brought the event upon itself. A Petitioner cannot be allowed to bring upon its own harm and then argue that action of the Commission becomes necessary.

**B. Significant adverse economic impact to telecommunications users.**

The first factor under § 251(f)(2) is significant adverse economic impact. 47 U.S.C. § 251(f)(2)(A)(i). The FCC has not promulgated definitional guidance regarding significant adverse economic impact. As a result, it is proper to consider the common meaning of the terms. Significant is defined as, "...having or likely to have influence or effect; important; of a noticeably or measurably large amount...." Webster's Ninth New Collegiate Dictionary, Merriam Webster Inc., 1096 (1991). Adverse is defined to be, "...opposed to one's interests...." Id. at 59. Economic is defined as, "...of or relating to a household or its management...." Id. at 395. Lastly, impact is defined to be, "...an impelling or compelling effect...." Id. at 603. As a result, Petitioners claims of significant adverse economic impact fail unless each Petitioner provides substantial credible evidence of a significant financial impact upon its users that is likely to be contrary to his/her financial interests. Indiana Bell Telephone Company Incorporated, 31 F.Supp.2d at 632 (*citing* 47 U.S.C. § 251(f)).

Several state PUCs have considered the impact of monthly costs upon their consumers. Although the resultant decisions are not binding upon the Commission, they do provide some guidance as to what has been deemed to be a "significant adverse economic impact." The Arizona Corporation Commission has found an end user direct cost of two dollars and ninety-three cents insufficient to be a significant adverse economic impact. In the Matter of the

Emergency Petition of Arizona Telephone Company for Suspension of the LNP Obligations of Section 251(b), Arizona Corporation Commission, Docket No. T-02063A-04-0010 (2004).

Moreover, the NY PUC has found failure to introduce concrete evidence of actual impact upon a LECs users fatal to a claim of adverse economic impact. It flatly rejected petitioners' claims of adverse economic impact upon users when those petitioners failed to produce any impact evidence. *See* Order Denying Petition, State of New York Public Service Commission, Case 03-C-1508 (2004). It stated,

FCC number portability orders permit incumbent local telephone companies to recover certain costs of providing number portability by charging their customers a monthly fee for a period of five years. Petitioners provided individual estimates of the cost of number portability to support their contention that intermodal portability is unduly economically burdensome. *However no company provided a detailed analysis of the impact on their respective customers in the petitions.* Using the company submissions, the Commission does not find a basis to conclude that there would be 'significant adverse economic impact.'

Id. (*emphasis added*). Failure to produce a detailed analysis of impact upon users should likewise be fatal to Petitioners' claims of significant adverse economic impact upon users in this case.

**C. Unduly economically burdensome requirement.**

The second circumstance is for the avoidance of an unduly economically burdensome requirement. 47 U.S.C. § 251(f)(2)(A)(ii). The Commission has been provided some guidance on what constitutes unduly economically burdensome as required in the tests found under both § 251(f)(1) and (2). *See* In the Matter of Implementation of the Local Competition Provisions in the Telecommunications Act of 1996, CC Docket No. 96-98, Order, FCC 96-483 (1996). In that decision, the FCC has stated that in order to justify a suspension or modification, the proof must be sufficient to establish, "...burden beyond the economic burden that is typically associated with efficient competitive entry." Id.

The Eighth Circuit Court of Appeals has further fleshed out the unduly economically burdensome standard. The court has indicated a Commission must look to the whole of the burden, and not just a discrete part. Iowa Utilities Board, 219 F.3d at 761. In addition, the court noted that a Commission should also consider the fact that the LECs will, "...be paid for the cost of meeting the request and may also receive a reasonable profit pursuant to § 252(d)." Id. at 762.

Failure to introduce specific and supported information of economic harm is fatal to a claim of the existence of this element. Speculation and unsupported allegations of economic harm have been deemed insufficient to establish undue economic burden. *See Clarification Order, Pennsylvania Public Utility Commission*, 33 Pa.B. 1904, Doc. No. P-00971177 (2003). Speculation and unsupported allegations are insufficient because a finding of undue economic burden is not proper unless the PUC reaches sufficient technical findings. Indiana Bell Telephone Company Incorporated, 31 F.Supp.2d at 632 (*citing* 47 U.S.C. § 251(f)).

**D. Technical feasibility.**

The remaining basis to meet the first part of the test for a suspension or modification is technical infeasibility. 47 U.S.C. § 251(f)(2)(A)(iii). The FCC has defined the term technically feasible as it is intended to apply with respect to interconnections considerations under § 251(f). *See* 47 C.F.R. § 51.5. Specifically, § 51.5 states,

Technically feasible. Interconnection, access to unbundled network elements, collocation, and other methods of achieving interconnection or access to unbundled network elements at a point in the network shall be deemed technically feasible absent technical or operational concerns that prevent the fulfillment of a request by a telecommunications carrier for such interconnection, access, or methods. *A determination of technical feasibility does not include consideration of economic, accounting, billing, space, or site concerns, except that space and site concerns may be considered in circumstances where there is no possibility of expanding the space available.* The fact that an incumbent LEC must modify its facilities or equipment to respond to such request does not determine whether satisfying such request is technically feasible. An incumbent LEC that claims that it cannot satisfy such request because of adverse network reliability impacts must prove to the state commission by *clear and convincing evidence* that such

interconnection, access, or methods would result in specific and significant adverse network reliability impacts.

47 C.F.R. § 51.5 (*emphasis added*). Under the above regulation, the clear and convincing evidence standard applies. *Id.* “The ‘clear and convincing’ standard lies somewhere between ‘the rule in ordinary civil cases and requirements of our criminal procedure, that is, it must be beyond a reasonable doubt.’” In the Matter of the Medical License of Dr. Setliff, M.D., 2002 SD 58, ¶ 13, 645 N.W.2d 601, 604 (*citing* Kent v. Lyon, 1996 SD 131, ¶ 15, 555 N.W.2d 106, 111). Under this standard, Petitioners must introduce clear and convincing evidence of technical feasibility before this element can be satisfied.

The Commission should find the implementation of LNP technically feasible if Petitioners fail to demonstrate LNP is technically infeasible under a similar analysis as the above guidance. In addition, the Commission should disregard, “unsupported statements” regarding “unspecified existing technical limitations” as unpersuasive. *See* Order Denying Petition, State of New York Public Service Commission, Case 03-C-1508 (2004). Rather, the Commission must reach sufficient technical findings of technical infeasibility before this factor can be deemed established. Indiana Bell Telephone Company Incorporated, 31 F.Supp.2d at 632 (*citing* 47 U.S.C. § 251(f)). Without such findings, Petitioners technical infeasibility claims fail.

**E. If a Petitioner shows that Commission action is necessary because of technical infeasibility, significant adverse economic impact on its consumers or because an undue economic burden will result to Petitioner, before acting the Commission must determine whether its actions are consistent with public interest, convenience and necessity.**

A suspension or modification is not properly granted under § 251(f)(2) unless the Petitioners establish that such a suspension or modification is consistent with the public interest, convenience and necessity. 47 U.S.C. § 251(f)(2)(B). Consistency with public interest alone is not enough to warrant a suspension or modification under § 251(f)(2). Petitioners must still establish the existence of a factor required under § 251(f)(2)(A). Should the PUC find

Petitioners fail to establish the three criteria necessary for suspension or modification, then consideration of public interest is not necessary. Id.

In making a determination of whether LNP is inconsistent with the public interest, convenience and necessity of a LEC service area, the Commission needs to look at the basis in a historical context of why LNP end service has been promulgated. In 1996, the FCC noted promotion of competition was one of the objectives of the 1996 Act. See Implementation of the Local Competition Provisions of the Telecommunications Act of 1996, CC Docket No. 96-98, First Report and Order, 11 FCCR 15499, Fcc 96-325 (1996). Congress recognized that LNP was critical to fostering competition. Id. The United States Supreme Court has also indicated that a purpose of the Telecommunications Act was to promote competition in local telephone markets. Reno, 521 U.S. at 857-58. The FCC continues to maintain the position that LNP is in the public interest. It has stated, “Implementations of LNP for CMRS providers has promoted, and will continue to promote, competition by allowing consumers to move to carriers that would better serve consumers’ needs without having to make the difficult choice to give up their number.” See In the Matter of Telephone Number Portability, Order, CC Docket No. 95-116 (May 7, 2004). As a result, the FCC has concluded that unnecessarily delaying implementation would improperly delay benefits to the public. Id.

In addition, state PUCs continue to recognize LNP to be, “...clearly in the public interest in a competitive telecommunications environment.” Order Denying Petition, State of New York Public Service Commission, Case 03-C-1508 (2004)(noting, “...number portability has consistently and repeatedly been found to be in the public interest at both the state and federal levels.”). The Michigan PUC has likewise denied a request to suspend or modify the requirements because it concluded that such action would be, “anti-competitive” and “anti-consumer.” See In the Matter of Waldron Telephone Company and Ogden Telephone Company

for Temporary Suspension of Wireline to Wireless Number Portability Obligations Pursuant to § 251 (f)(2) of the Federal Telecommunications Act of 1996, as Amended, Michigan Public Service Commission, Opinion and Order, Case Nos. U-13956 and U-13958 (February 12, 2004).

When making a determination of whether Commission's actions would be consistent with the public interest, convenience and necessity, the Commission should only look to the individual Petitioner's area. It would be inconsistent with the Act and statutory scheme to somehow construe this test to be an analysis of LNP as a whole or LNP in rural areas as a whole. Rather, state Commissions need to look at the petitioning LECs area and the public interest, convenience and necessity within that area. To look beyond a petitioner's area, would be inconsistent with the language of 47 U.S.C. § 251(f)(2) where the evaluation concerns "a local exchange carrier."

**II. The Commission must deny any requests for suspension or modification from Golden West, Vivian Telephone Company, Kadoka Telephone Company, Armour, Bridgewater-Canistota Telephone Company and Union Telephone Company because the companies failed to provide individual company specifics upon which the Commission could base a decision under 47 U.S.C. § 251(f)(2)(A).**

Docket Number TC-045 is a joint petition filed by Golden West, Vivian Telephone Company and Kadoka Telephone Company. Docket Number TC-046 is a joint petition filed by Armour, Bridgewater-Canistota Telephone Company and Union Telephone Company. The corporate witness for all these companies testified that the Petitioners did not provide individual information on these companies. TR, Page 792, Lines 1-19. To meet the burden to prove the necessity for waiver or exemption, the statute clearly requires that "a local exchange carrier" must file with the state Commission. 47 U.S.C. § 251(f)(2). The State of North Carolina Utilities Commission has already recognized that failure to do so obligates the Commission to reject the petition. See In the Matter of Petition by the Alliance of North Carolina Independent Telephone Companies for Limited Modification of Their Requirement to Provide Number

Portability, Docket No. P-100, SUB 133R, State of North Carolina Utilities Commission, Raleigh, 2003. Furthermore, noted by staff counsel during the hearing, prior to the hearing, the Commission requested such individual information be provided. TR, Page 72, Lines 1-4.

The reason this information must be provided by each LEC becomes obvious when one reviews the standards that the Commission must judge the request for modification or suspension. The need to avoid a significant and adverse economic impact on telecommunications users must center on the LECs' customers. One cannot argue that the Commission must make this judgment on some broader scale. Clearly, the FCC and Congress have allowed LNP to go forth in a large portion of the United States. The only logical reading of the statute is to require the Commission to do an analysis of each LEC area for impact.

The same also applies in regard to imposing a requirement that is unduly and economically burdensome. It would be inappropriate for the LEC to somehow argue costs and economic burdens associated with LNP requirements in other areas somehow justify a modification or suspension for that particular LEC.

Further, the testimony of Mr. Law, the corporate representative on behalf of these various companies, illustrates the need to reject these joint petitions. When asked whether he was representing to the Commission that all these companies have the same demographic make-up, he clearly stated "No I am not." TR, Page 777, Lines 20-24. Even with the information submitted, one has to conclude there are significant differences between these companies.

Armour, which is geographically separated from the other companies that its financial information is commingled with, has only 583 access lines and has 33 lifeline customers. TR, Page 783, Lines 3-8. This equates to 5.66 percent of their access lines being lifeline customers. Union Telephone Company has 1600 access lines and only 38 lifeline companies. Making less than 2.5 percent of its customers lifelines customers. TR, Page 777, Lines 1-10.

Golden West, Kadoka Telephone and Vivian Telephone, may be located in contiguous areas but, there is no way for this Commission to ascertain whether LNP implementation in Kadoka is an extremely low cost because of limited numbered exchanges or an extremely high cost because of an older switches. The Commission's inability to make these determinations is a result of these companies failing to properly file their information individually. The plain language of the statute requires the Commission to consider each of these Petitioners individually. Petitioners have failed to provide information under which the Commission can make an individual determination. Therefore, under 47 U.S.C. § 251(f)(2)(A), these two petitions must be rejected outright.

**III. None of the Petitioners have met their burden to prove they are entitled to a suspension or modification under 47 U.S.C. § 251(f)(2) as the Petitioners have failed to submit the necessary evidence to support such action.<sup>3</sup>**

Petitioners' cost estimates should be rejected. The cost estimates are fundamentally flawed because they assume that LNP must be provided pursuant to an interconnection agreement. Because the costs of providing LNP service ripple throughout the standards that Petitioners have to prove under 47 U.S.C. § 251(f)(2), it is appropriate to address Petitioners' cost analysis as a threshold issue. All three costs experts presented by Petitioners conditioned their proposed LNP transportation system to meet in existing interconnection agreements.<sup>4</sup> Mr. Davis went as far to claim that Western Wireless' proposal was technically infeasible because Western Wireless' its interconnection agreement with Petitioners did not allow for traffic over the Qwest tandems. TR, Page 997. Lines 6-15.

---

<sup>3</sup> While Western Wireless is contending that no Petitioner has actually met its burden in this filing, Western Wireless is not disputing that it stipulated in the record to a continuing suspension until May 31, 2005 for the City of Faith, Stockholm, Tri-County and Kennebec. See TR, Page 622 – 623, 661.

<sup>4</sup> A fourth cost expert was presented on behalf of Cheyenne River Sioux Tribe Telephone Authority. Since that matter has been settled, his analysis is not independently reviewed in this brief.

It is inappropriate for Petitioners' cost experts to condition LNP delivery on the existence of an interconnect agreement. The FCC has already determined interconnection agreements are not necessary to provide local number portability. See In the Matter of Telephone Number Portability, CC Docket No. 96-98, Order, 19 F.C.C.R. 875 (2004) at paragraph 1. In rejecting the need for an interconnection agreement to provide for local number portability, the FCC concluded

...that wireline carriers should be required to port numbers to wireless carriers without necessarily entering into an interconnection agreement because this obligation can be discharged with a minimal exchange of information. We thus find that wireline carriers may not unilaterally require interconnection agreements prior to intermodal porting.”

Id. at paragraph 34. In complete disregard to the FCC, Petitioners' cost experts require interconnection agreements. Consequently, they have come up with proposals that drive costs extraordinarily high in an attempt to convince this Commission that a significant adverse economic impact will occur on the users or that the requirement for LNP becomes unduly economically burdensome<sup>5</sup> and Petitioners meeting their LNP obligation is contrary to public policy.

As illustrated by the MIC petition in front of the Minnesota Public Utilities Commission, Petitioners could have taken the approach of providing this service at a low cost as MIC did in Minnesota. Some of the Petitioners, specifically Sioux Valley Telephone and Interstate Telecommunications, are members of MIC and were part of this original petition in front of the Minnesota Public Utilities Commission. While these individual Petitioners may have withdrawn from the Minnesota action after the hearing started in front of this Commission, it does not

---

<sup>5</sup> It appears that Western Wireless is being penalized because they have an interconnection agreement with Petitioners. Because of this, defendants' experts claim you have to route LNP traffic pursuant to the existing interconnection agreement. Since the FCC does not require interconnection agreements, it would appear a wireless carrier who does not have an interconnection agreement with Petitioner would be treated better. It is incongruent to the total purpose of the Act to penalize people for entering into interconnection agreements.

diminish the fact that they could have taken the same approach to reduce the cost of providing LNP. *See* ITC Exhibit 9, Letter of June 23, 2004 to Minnesota Public Utilities Commission

Petitioners spend a large section of their brief dealing with the unresolved issue of transport. *See* Petitioners' Brief, Pages 30-40. The issue of transport runs throughout Petitioners' analysis. It has implications of whether there is a significant adverse economic impact, whether there is a resulting unduly economic burden and whether Petitioner' avoidance of their LNP obligation is in the public interest.

The difficulty with the analysis presented by Petitioners arises out of their all or nothing approach. For instance, Petitioners continually assail the Western Wireless suggestion to use existing tandem trunks, whether it be SDN or Qwest, rather than requiring hundreds of additional DS1s be installed. They complain that they are not "obligated" to route traffic over SDN or Qwest tandem trunks. At the same time, Petitioners wail about the install costs and monthly reoccurring costs associated with all the DS1s that they insist they must use to be conducive with their interconnection agreements.

It does not appear that Petitioners contest they have an obligation to route ported calls under the LNP constructs. Simply, they do not want to be obligated to deliver those calls by sending them over a tandem trunk out of their service area.

Providing LNP should not be examined as an all or nothing approach. The opportunity, not the obligation, exists to route ported traffic over existing facilities. The opportunity to use existing facilities reduces the monthly line item charge by as much as 90 percent as illustrated between calculations of Petitioners' experts and Western Wireless' expert.<sup>6</sup>

---

<sup>6</sup> See for example, ITC Exhibit 4B, Interstate's LNP costs per line per month including transport is \$13.46 while under the Western Wireless transport analysis (See Western Wireless Hearing Exhibit 9) the LNP monthly per line cost including transport is \$.80.

Moreover, testimony was clear that a number of the Petitioners already have existing points of interconnect with wireless carriers. As Mr. Williams correctly pointed out, the same type of resolution used by James Valley could be available to these Petitioners, for example Interstate, since Western Wireless already has existing POIs.

Instead of finding a low cost effective way to provide for LNP traffic,<sup>7</sup> Petitioners' cost experts proposed creating new facilities and dedicating them to LNP. For example, a proposed remedy for Venture entailed the installation of well over 100 new type 2B DS1s. *See* DeWitte Prefiled Direct for Venture, Page 13. Mr. DeWitte's resulting cost numbers for Venture entailed \$486,000 for nonrecurring transport related costs and recurring monthly transport related costs of \$218,546. *See* ITC Exhibit 4B.<sup>8</sup> Under these numbers, in the first year alone for transport, Venture is trying to convince this Commission it would rather spend \$3,118,552 (\$496,000 plus 12 times \$218,546) than transport the traffic as recommended by Western Wireless.

Mr. Houdek contends this is necessary to maintain the integrity of his system and because under Western Wireless' proposal he would then have to potentially carry his competitors traffic for free. TR, Page 383, Line 22 through Page 385, Line 19. When Mr. Houdek complains that he might have to pay for transportation for Western Wireless under the MIC approach endorsed by Western Wireless in this filing, he wants this Commission to accept the premise that Venture should spend over 3.1 million dollars the first year to provide LNP rather than the \$25,000 in transport costs Venture would incur following the Western Wireless proposal. *See* Exhibit 9 (\$800 nonrecurring plus 12 times \$2,012 monthly recurring). Mr. Houdek's complaint that

---

<sup>7</sup> In the MIC petition, it was presented to the Minnesota PUC that routing LNP traffic "can be accomplished efficiently and cost effectively, if such calls were routed via the same facilities used by the CMRS providers to deliver their traffic to the companies." Hearing Exhibit 6, Petition Page 5. Further, such a method of routing ported numbers was "technically sound, efficient and not unduly economically burdensome." *Id.* Petition, Page 9.

<sup>8</sup> Mr. DeWitte's original numbers showed a requirement of \$625,000 in initial costs and \$220,000 in recurring costs. After several errors in his calculations were pointed out to him, Mr. DeWitte's final numbers are reflected on ITC Exhibit 4B.

Venture would have to pay for the transport of LNP under Western Wireless' approach falls flat. Under his own experts' cost analysis, he is paying 3.1 million dollars in the first year to provide LNP call transport. Western Wireless over the Qwest tandem lines currently pays three tenths of one cent per minute. TR, Page 588, Lines 21-25. Even if one were to accept Mr. Houdek's argument that he might have to pay as much as \$.20 per minute to transport LNP calls, in the first year Venture would have to transport 15,592,760 minutes of LNP calls before it spent the same amount they are proposing to spend under Mr. DeWitte's proposal. This is the equivalent of 10,829.3 days of phone usage.

This same analysis applies to all Petitioners' cost estimates. Every Petitioner and every cost expert ratcheted up their transport costs as high as possible and refused to look at any alternatives.

In addition, every cost expert testified that he did not consider any economics of scale. Instead, they all assumed such things contractual negotiations to be required by all Petitioners with all wireless companies, whether the wireless companies were actually doing business in their territory or not.

A readily available example of this overstatement is how Mr. DeWitte treated the marketing flyer. He not only assumed that it would cost a dollar per line user per year to provide this marketing flyer, although Interstate's own documents show that they produced a monthly flyer at a quarter a piece, he assumed that all seven of his clients would each spend \$15,000 designing this flyer. He did not assume that one flyer explaining LNP could be designed for all his clients or even potentially all the Petitioners. TR, Page 153, Lines 1-25. Because the cost analysis presented by the Petitioners were clearly overstated, they should be disregarded by this Commission.

The waiver and modification statute, 47 U.S.C. § 251(f)(2)(A) requires a finding that Commission action must be necessary to avoid a significant adverse economic impact or unduly economically burdensome imposition. Commission action is not necessary in these petitions. Rather, the Petitioners hold in their hands the power to avoid causing a significant adverse economic impact on their own customers or imposing any kind of economic burden upon themselves.

- A. Each Petitioner has failed to show the Commission that its action is necessary to avoid a significant adverse economic impact on users of telecommunications services wherein none of the Petitioners provided any demographic information from their customer base and, with the exception of Kennebec, failed to provide any information on their customers' desires for LNP.**

In Mr. Bower's prefiled direct testimony, he provided some information regarding a survey they had conducted on Kennebec's customer base. In that survey, Kennebec mailed out surveys to their customer base. It was left to the recipient's discretion to return the completed survey.<sup>9</sup> Bower Direct Page 2, Lines 12-15. Of the surveys mailed back, over one-fifth of Kennebec's customers said they would be willing to pay a surcharge of \$.50 per month to have an option for LNP. At \$1.00 per month, the demand was just short of twelve percent. No feedback was solicited regarding a rate of \$1.50. However, even at a surcharge of \$3 there were still 1.6 percent of the responding customers willing to pay for a LNP service. Bower Direct, Page 3, Lines 6-12.

As to the demographic information, Mr. Bowers testified that one in five residents of Kennebec and Presho are 65 years of age or older according to the 2000 U.S. Census. He compared this to one in eight or 12.4 percent of the United States. Bower Prefiled Direct, Page 5, Lines 3-6. The Kennebec interest is gauged at a lower income demographic in South Dakota.

---

<sup>9</sup> Western Wireless would assert that people who do not want to pay extra fees generally will respond to these surveys as opposed to people who do not object extra fees and thus, people who want LNP are likely unrepresented in such a survey.

It is logical that if 12 percent of the customer base is willing to pay \$1 per month in a community such as Kennebec, then Petitioners with higher demographics and those closer to metropolitan areas would have increased interests and increased tolerance for these rate increases.

As unscientific as they are, these numbers support LNP implementation. Western Wireless predicts that they will see ports of three percent a year from wireline customers. A rate Western Wireless has observed in other areas. TR, Page 645, Lines 13-19. Over the five year projected cost analysis done by Western Wireless, it was predicted that approximately 15 percent would move over five years. As the testimony of Mr. Williams reflected, the desire for these types of services is growing in rural communities. TR, Page 693, Lines 19; TR, Page 694, Lines 21, *See also* Western Wireless Hearing Exhibits 11 and 13.

By Western Wireless' estimates, excluding transport, Alliance and Splitrock, Golden West, Vivian and Kadoka all have costs below \$.50. Mid-State's cost is only \$.54. *See* Western Wireless Exhibit 18. In this range, over 20 percent of the people in Kennebec wanted to pay for this option. As a comparison, Western Wireless customers pay \$.85 per month for LNP. TR, Page 679, Lines 17-20.

Several companies fell into a range of less than \$1 but more than \$.50. Brookings is only \$.76, excluding transport. *See* Western Wireless Exhibit 9. Interstate is only \$.62; Venture is only \$.59; McCook Telephone is \$.89; Sioux Valley is \$.62; and Valley Telephone is \$.63, excluding transport. *See* Western Wireless Exhibit 15. Santel is only \$.82. *See* Western Wireless Hearing Exhibit 19. None of these companies provided any type of polling or research on what their customers were willing to pay. Areas such as Brookings have a younger population than areas Kennebec and likely a higher household income. Based on these demographics, demand for LNP will be higher. *See* Exhibit 13.

All Petitioners except Kennebec relied on simply anecdotal, self-serving reports reported by company representatives suggesting that no one has bothered to ask them for portability. If 20 percent of the people in Kennebec and Presho are interested in paying for number portability at \$.50 and twelve percent in those same communities are interested at \$1 per month, there is a substantial interest in number portability in this state.

Obviously, from the testimony submitted at the time of the hearing and from the briefs, Petitioners do not want to provide LNP. Petitioners know there is demand for LNP. Kennebec's survey demonstrated demand. *See* Bowar Direct, Page 3. Western Wireless' survey of its customers showed 16 percent were willing to switch land line service to wireless and 25 percent were unsure if they would make the switch. If individuals could take their land line number with them, common sense tells you a number of these people would chose to make that transition. *See* Hearing Exhibit 11. As noted by the FCC, "the focus of the porting rules is on promoting competition, rather than protecting individual competitors" In the Matter of Telephone Number Portability, CC Docket No. 96-98, Order, 19 F.C.C.R. 875 (2004) at paragraph 27. This Commission should disregard the cost proposals submitted by all the Petitioners in this case because they were created with an intent to avoid competition and avoid obligations of LNP. The cost studies were done in such a way to artificially create an impression that LNP was extraordinary expensive.

The company witnesses as a whole testified that they did an extensive investigation as to the economically feasibility of LNP. Yet, none of them contacted Western Wireless or any other cellular providers about how they could provide this service at low cost and only came up with one cost analysis. *See* TR, Pages 47-49, 315, 345, 376-377, 430-431, 433, 742, 782, 816, 829, 913, 984, 1046 and 1098. None of them asked wireless companies how they could lower transport costs or what might be an effective method to provide this service at a low cost. These

actions coupled with the over-the-top mechanisms suggested by the cost experts clearly imply that the Petitioners simply want to avoid providing LNP.

The Petitioners must show under this element that it is the Commissions actions are necessary to avoid a “significant adverse economic impact on the users of telecommunication services generally.” Any increase in fees arguably causes some economic impact. However, increase in competition actually nullifies some of the increase in fees by lowering costs to the public generally and providing better services. TR, Page 560, Lines 12-18. Petitioners have not demonstrated at what level an increase in fees creates an adverse economic impact. Therefore, Petitioners had not demonstrated the existence of this element.

**B. None of the Petitioners have shown how this Commission’s action is necessary for any Petitioner to avoid an undue economic burden where all the Petitioners have testified that they can pay for LNP.**

None of the Petitioners have taken the position that they cannot pay for implementation of LNP. Petitioners all freely admit that they believe they could cover at least the majority of their costs through an end user surcharge. TR, Page 558, Lines 15-18; TR Pages 89, 92, 313, 346, 378-379, 438-439, 742, 784-785, 816, 829, 953-954, 973, 984, 1047 and 1101.

As detailed above, Petitioners’ experts greatly overstated the costs of implementing LNP. Yet, Petitioners do not take the position they could not pay for it even at these exaggerated estimates. Some of the Petitioners complain that if they have to provide LNP it may slow down their rollout of other services, such as DSL. This is irrelevant to this analysis of undue economic burden. The test is not whether Petitioners would prefer to rollout a service where they had no competitors rather than provide LNP where they could lose some customer base. The standard is whether the Commission’s action is necessary to prevent the imposition of an unduly economically burdensome requirement. 47 U.S.C. 251(f)(2)(A)(ii).

The mere fact that these Petitioners do not want to provide LNP does not justify an undue economic burden. Similarly situated LECs have agreed to provide LNP services. Both James Valley and Cheyenne River Sioux Tribe Telephone Authority, during the pendency of these proceedings, agreed to provide LNP. Further, at least three LECs located in the State of South Dakota did not even apply for suspension or modifications. In all, Petitioners did not cite to anything that distinguished any one of them from other LECs that are providing this service, or from the other Petitioners in these filings that resulted in individual economic burden. Because of this, the Commission cannot find that any of the Petitioners met the standards required under the statute.

**C. Providing LNP for all Petitioners is technically feasible as all their cost experts have agreed that there are technically feasible ways in which to implement the service.**

In the absence of clear and convincing evidence of technical infeasibility, the PUC should reject Petitioners claims of the existence of the third prong delineated under § 251(f)(2). *See* Post-Hearing Brief of Petitioners and SDTA, pp. 3, 54; 47 C.F.R. § 51.5. Notably, Commission proffered a pre-hearing opinion that LNP is technically feasible.

Ms. Wiest: Thank you. Commission staff has not yet taken a position on any of the LNP Dockets. However, based on our valuation of the prefiled testimony we have arrived at some initial thoughts with respect to the standards that the Commission has to apply in these cases. One of the questions is whether the suspension is necessary to avoid imposing a requirement that is technically infeasible. Based upon our evaluation of the prefiled testimony, it's staff's belief that, no, it is not technically infeasible for any of the Petitioners to implement LNP. There are certainly costs associated with implementation and there appear to be routing and who pays issues that are not necessarily easy to resolve but it does appear that LNP can be implemented.

*See* Hearing Transcript, p. 38. Based upon the Commission's pre-hearing findings, it is apparent that Petitioners offered no clear and convincing evidence of technical infeasibility in their pre-file testimony.

Petitioners further failed to introduce any evidence of technical infeasibility in the hearing. Rather, all of Petitioners' witnesses testified that LNP is technically feasible.

Attorney Wieczorek: And when we talk about the technical cost issues you'd agree with me that, you know, LNP is technically feasible – can be technically done, it's all a matter of how much it costs.

Mr. DeWitte: That's correct. In no – I'm not going to tell you that it technically can't be done, at least for any of the clients that we're representing as part of these proceedings. And I think that you can take a look at anything, and the fact is if you throw enough money at it, yeah, you can make it work from a technical perspective.

*See* Hearing Transcript, p. 157.

Attorney Wieczorek: Yeah. But that's trunk groups. And I don't want to get into any confusion here but what you have proposed, your method, that's technically feasible today; correct?

Mr. Davis: That is correct, yes.

*See* Hearing Transcript, p. 997. Based upon the above excerpts, it is evident that the Petitioners' evidence supports feasibility. In fact, Petitioners introduced no evidence to indicate LNP is technically infeasible. Therefore, Petitioners repeated inferences of technical feasibility in their post-hearing brief should be categorically rejected as unsupported.

**IV. Even if a Petitioner demonstrates Commission action is necessary to avoid significant adverse impact, or imposition of an unduly economically burdensome requirement, or technical feasibility all the Petitioners failed to show how the Petitioner having to provide local number portability within its service area would be inconsistent with public interest, convenience and necessity.**

Under 47 U.S.C § 251(f)(2), a Petitioner must show how Commission action is necessary to avoid significant adverse economic impact or to avoid the imposition of an unduly economic burden, or technical infeasibility, before the Commission need even address whether providing the LNP is somehow inconsistent with public interest, convenience and necessity.<sup>10</sup> No where within the Petitioners' submitted testimony did they show how providing LNP services within

---

<sup>10</sup> As all the Petitioners' cost experts admitted that LNP is technically feasible, it is not addressed in this section.

their service area would be inconsistent with the public interest, convenience and necessity.

Rather, Petitioners relied upon broad complaints against LNP.

Mr. Watkins freely admitted that he did no independent evaluation of any of the Petitioners. In fact, he contended that all of his opinions applied “evenly” to every Petitioner. TR, Page 509, Lines 1-4. He also freely admitted that nowhere in his testimony did he single out any specific Petitioner and talk about how LNP could impact it specifically in any certain way. TR, Page 509, Lines 5-9. He then went on to state no amount of cost would be reasonable because he did not believe there was any demand for LNP. TR, Page 511, Line 21 through Page 513, Line 3.

Mr. Watkins makes no distinction between the Petitioners where wireless service might be ubiquitous throughout their service areas and those where there might be parts of their service area with no wireless service. He makes no distinction on demographic information. He makes no distinction on whether the Petitioner serves a South Dakota urban community, such as Brookings, or a more rural area. Rather, he essentially simply complains that the FCC is not requiring interconnection agreements and that some of the issues are yet unresolved. TR, Page 502. And, thus, LNP should not be allowed.

Moreover, he claims there is no evidence of demand for LNP. He relies solely upon anecdotal experience in urban areas. TR, Page 499, Lines 1-3. He disregards the Kennebec survey results. He ignores the surveys submitted by Western Wireless showing the customer demand for portability. *See* Western Wireless Hearing Exhibit 11 and 13.

Basically, Mr. Watkins’ testimony is so broad and general it should be rejected. His opinions are not derived from any kind of review of these Petitioners’ situations or even the State of South Dakota. By his own admissions, his opinions supposedly apply evenly to a consumer who is in the suburbs of Sioux Falls and a consumer who is in a remote area of western South

Dakota. Mr. Watkins wants this Commission to believe that demand for LNP is the same in Faith as it is in Brookings, South Dakota. Yet, he has done no surveys. He cites no studies out of South Dakota. He cites no particularities as to why LNP would be inconsistent with public interest for any Petitioner. He simply does not think LNP should be allowed in South Dakota, or for that matter, anywhere else.

When looking at whether LNP is consistent with public interest, convenience and necessity, the Commission is not looking at this issue for the whole nation. 47 U.S.C. § 251(f)(2). It does not provide this Commission with the ability to redraft the Telecommunications Act of 1996. While Mr. Watkins would like to revisit LNP under the Act, this Commission's focus is that LNP impact on these Petitioners and the South Dakota consumers who these Petitioners serve.

One need only to look as far as Kennebec's own survey to see a desire for LNP portability as a service. In Kennebec evidence exists of a significant demand. Mr. Watkins ignores Kennebec's own survey and only talks about anecdotal experience. In doing so, his analysis becomes incomplete and irrelevant.

More appropriately, one needs to look at the fact that the competition created by local number portability will improve services to all users. As Mr. Williams testified, the ability to take that phone number that someone feels identified with to another carrier strengthens customer choice immensely. TR, Page 619, Lines 11-25. By strengthening consumer choice, one encourages businesses to satisfy the consumer. What is the demand for LNP in Brookings or in those areas outside of Sioux Falls or Aberdeen or Mitchell? Petitioners did not choose to provide that information. Rather, the remaining Petitioners simply offer this Commission generic complaints about LNP. None of the complaints deal with the facts that the public in

South Dakota is extremely mobile and, according to all the actual hard numbers provided to this Commission, interested in LNP services.

Furthermore, Petitioners are not currently providing LNP. There has not been any marketing to individuals promoting the competition. Education through marketing will increase the demand for LNP. That education cannot occur until Petitioners begin to provide the required service.

**V. Should the Commission determine a suspension or modification is warranted, the Commission should not grant any suspension or modification beyond 60 days from the date of the decision to become compliant with LNP.**

Western Wireless stipulated to the propriety of granting an extension until March 31, 2005 to Kennebec, City of Faith, Western, Stockholm and Tri-County as they all have implementation costs at approximately at \$2 or over based on Western Wireless' projections. James Valley Telephone and Cheyenne River Sioux Tribal Telephone Authority agreed to implement LNP in 90 days. In James Valley's situation, even though DeWitte had estimated in his prefiled testimony for James Valley that it would take several months to implement LNP, James Valley agreed it could become LNP compliant within 90 days.

Of the remaining Petitioners, none have provided a valid showing of why modification or suspension should be granted. Company representatives took the position that they fully investigated LNP before coming to this Commission with these Petitions. During the hearing, it became evident that most of the companies approach to the investigation was simply on how not to implement LNP. No substantial steps had been made to become LNP compliant.

Nonetheless, Petitioners have requested at least six months from any decision to implement LNP.

As Mr. Williams testified at the hearing, on most Nortel switches, which most Petitioners have, LNP software only needs to be activated. The software does not need to be installed. TR, Page 632, Lines 5-10. The Petitioners should not be rewarded for their attempts at trying to

build up reasons for this Commission to take action. Petitioners could have adopted a much more prudent, cost effective approach. For example, under Mr. DeWitte's plan, it was allegedly necessary for James Valley to provide LNP services to Western Wireless to have thirteen DS1s installed. Presently, James Valley is going to provide that service to Western Wireless using one DS1.

The Petitioners have the ability to avail themselves to the existing facilities in South Dakota, which are low costs alternatives, just like the RLECs have done in the MIC petition filed before the Minnesota Public Utilities Commission. In addition to the tandem solution, are the existing POIs. As Mr. DeWitte testified to in response to Commission questions, the way James Valley resolved its LNP obligations "merits evaluation by other carriers." TR, Page 238, Lines 4-5.

Rather than look to these alternatives, the Petitioners wholesale ask this Commission to simply give an open-ended extension of these suspensions. These suspensions are not tied to any dates certain but rather a six-month window after the rules are "finalized." However, no one could define for the Commission what "finalized" means.

When judging whether the Petitioners have met their burdens under 47 U.S.C. § 251(f)(2) in regards to the Petitioners use of available existing infrastructure, the tandems of SDN and Qwest and existing POIs with wireless carriers, the Commission should find the failure to meet their LNP obligations using these viable, low cost alternatives means Petitioners have not sustained their burden.

To reward other Petitioners who have held on to unreasonable proposals by granting them more than 60 days would only encourage such activities in the future. An Order by this Commission saying it will take no action for 60 days from the Order for noncompliance gives the

remaining Petitioners enough time to implement LNP in a low cost, efficient, and effective manner.

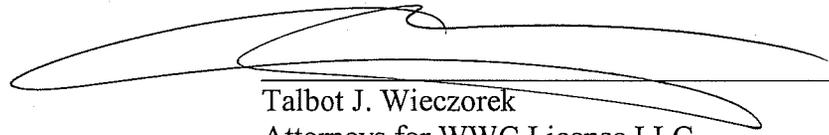

### CONCLUSION

For the reasons set forth above and the hearings in this matter, this Commission should grant to Kennebec, City of Faith, Western, Stockholm and Tri-County a suspension of their LNP requirements until March 31, 2005. As to the remaining Petitioners, the Commission should deny these petitions and enter an order setting forth it will take no action for 60 days but at the conclusion of 60 days, all Petitioners need to be compliant and provide LPN for their customers' benefit.

LNP is required under the Telecommunications Act of 1996. The fact that Petitioners may disagree with LNP implementation by Congress and the FCC does not reopen that issue in front of a state Commission.

Dated this 20 day of August, 2004.

## **PETITIONERS HAVE CORRECTLY STATED THE LEGAL STANDARD**

Petitioners' initial brief contains a detailed discussion of this Commission's jurisdiction to adjudicate the suspension/modification petitions that are now before it (Id. pp. 6-8). Western Wireless' brief does not challenge the Commission's jurisdiction to grant or deny the petitions, as its witness, Mr. Williams, conceded this point at the hearing. (Tr. 659).

Once having crossed that bridge, however, Western Wireless draws in a number of state and federal decisions in an apparent attempt to fashion a slightly different statutory framework that fits its version of the facts. As is demonstrated below, Western Wireless' Brief on this score is largely irrelevant. It is a classic "strawman" argument, constructed for no other purpose than to distract.

Western Wireless begins its statutory argument with a lengthy recitation of the language of section 251(f)(2) itself (the suspension statute), as it notes that the party filing the modification/suspension petition bears the burden of proof, and then recites FCC and federal court decisions that have precious little to do with the matters before this agency (Western Wireless brief, pp. 17-20). The brief then concludes on this score that: "Consequently, under the plain meaning of § 251(f)(2), the Commission should reject all joint petitions that fail to delineate company specific data" citing In the Matter of Petition by the Alliance of North Carolina Independent Telephone Companies for Limited Modification of the Requirement to Provide Number Portability, Docket No. P-100, Sub 133r, State of North Carolina Utilities Commission Raleigh, 2003. (Id.) This reliance upon a decision by the state of North Carolina appears designed to fit Western Wireless' later argument that a joint submission on behalf of Golden West and certain affiliates should be rejected, and, indeed, the North Carolina decision is cited again in that portion of Western Wireless' brief (Id., pp. 26-27).

This reply brief later reveals the disingenuousness of Western Wireless' argument on the joint submission of affiliates; the assertion that the North Carolina decision is at all relevant merits some discussion here, however.

A review of the decision illustrates its irrelevancy. The petition covered by the North Carolina Order concerned a legal question as to whether North Carolina's independent telephone companies (The Alliance of North Carolina Independent Telephone Companies ("Alliance")) were required to implement LNP – particularly for wireless carriers – where no showing was made by the requesting carrier that the ported number would only be used within the rate center from which it was ported. It appears that no data, collective or otherwise, was filed, in sharp contrast to the instant record, to permit any sort of economic or public interest analysis. Of course, this context was not disclosed by Western Wireless when it plucked the language upon which it relies from the North Carolina Order. The first three sentences of the quoted paragraph, omitted by Western Wireless, further expose this misuse of the case: "Whether landline-to-wireless number portability of the type described is a valid requirement is a separate question from whether a rival company should receive an exemption from number portability requirements pursuant to Section 251(f)(2) of the Telecommunications Act. Section 251(f)(2) allows for an exemption for a rival company from even a lawful obligation. In this regard, the Commission does not believe that the Alliance made a threshold showing under the exemption provision of Section 251(f)(2) of the Telecommunications Act that it is entitled to such exemption." In short, the North Carolina decision involved a legal issue, rather than the factual showings made in this case. Hence, as a legal standard, it is a strawman and irrelevant.

Western Wireless' brief next launches into a discussion of the meaning of the word "necessary" found in section 251(f)(2)(a). (Western Wireless brief, pp. 20-21). The import of this

discussion in the context of legal standards appears to be Western Wireless' contention that: "A Petitioner cannot be allowed to bring upon its own harm and then argue that action of the Commission becomes necessary." (Id., p. 21.)

This argument is a bizarre eyewash intended to cloud the issue. Nowhere in the rest of Western Wireless' brief does it contend that Petitioners have arranged to bring economic harm on themselves, or their subscribers, so that they could then file and prosecute their suspension/modification petitions. That would necessarily be the case, since Western Wireless made no such claim during the hearing.

Western Wireless' advocacy of what the "significant adverse impact" standard means in section 251(f)(2)(A)(i) fares no better. (Western Wireless brief, pp. 21-22). In this respect, Western Wireless resorts to Webster's Dictionary to define "significant adverse economic impact" and concludes from its less than objective dictionary survey<sup>1</sup>: "As a result, Petitioners claims of significant adverse economic impact fail unless each Petitioner provides substantial credible evidence of a significant financial impact upon its users that is likely to be contrary to his/her financial interests" citing Indiana Bell Telephone Company Incorporated v. Smithville Telephone Company, Inc., 31 F.Supp.2d 628, 632 (S.D. Ind. 1998) (Id.).

This argument suffers from serious defects, chief among which is the citation to Indiana Bell. Petitioners have examined that case, and it does not stand for the proposition cited, or anywhere close to it. The case dealt with EAS arrangements between Ameritech and Indiana independents, and simply does not contain the proposition attributed to it by Western Wireless.

---

<sup>1</sup> As an example, Western Wireless defines "impact" to be "...an impelling or compelling effect..." Western Wireless brief, p. 21. An additional definition of "impact" found in Webster's is "to impinge upon", which certainly differs from "compelling."

And, while Petitioners do not believe that Webster's Dictionary is an unreasonable source of authority to define words, we question the need to so carefully meter the meaning of "significant adverse impact" when the Commission's expertise will serve that very purpose. If Webster's is deemed necessary, Petitioners urge the Commission to take a more balanced view, as earlier discussed.

Western Wireless' brief next discusses its highly incorrect understanding of the "unduly economically burdensome" statutory modification/suspension element found in section 251(f)(2)(A)(ii). It states that the FCC's Local Competition Order defined this element to require proof of a "burden beyond the economic burden that is typically associated with competitive entry." The brief goes on to assert that the Eighth Circuit "fleshed out" this standard. (Western Wireless brief, pp. 22-23). This characterization is, to say the least, incomplete. In Iowa Utilities Board v. Federal Communications Commission, 219 F.3d 744 (8<sup>th</sup> Cir. 2000), the Court vacated FCC Rule 51.405(d) (47 C.F.R. § 405(d)). This section contained the proof requirement Western Wireless urges upon this Commission. This was not changed in the Supreme Court's review of that decision and the further decision on remand by the Eighth Circuit court. Iowa Utilities Board v. Federal Communications Commission, 301 F.3d 957 (8<sup>th</sup> Cir. 2002). Thus, the higher proof standard urged by Western Wireless has no lawful basis. Western Wireless again invokes Indiana Bell as instructive as to the meaning of "undue economic burden." (Western Wireless brief, p. 23). As previously discussed, however, the value of this precedent is nil given the passing reference made by the court to section 251(f)(2). In any event, the rule against "speculation and unsupported allegations" that Western Wireless attributes to this case is unremarkable.

The remaining standard discussed by Western Wireless under section 251(f)(2)(A) concerns the showing of technical infeasibility (47 U.S.C. § 251(f)(2)(A)(iii)). Western Wireless urges a novel standard of “clear and convincing” proof as to technical feasibility, which it then translates, based on South Dakota judicial precedent, as “beyond a reasonable doubt,” citing In the Matter of Medical License of Dr. Settliff, M.D., 2002 S.D. 58, 645 N.W. 2d 601, 604 (further citation omitted) (Western Wireless brief, pp. 23-24).

As Western Wireless has relied upon a demonstrably incorrect FCC Rule, the rest of its syllogism fails. As is evident from the text quoted by its brief, FCC Rule section 51.5 concerns the definition of “technically feasible.” That section defines the term by reference to “access to unbundled network elements” as the first sentence demonstrates.

As the Commission is no doubt aware, however, access to unbundled elements is an unbundling obligation contained in section 251(c), while the duty to provide Local Number Portability is contained in section 251(b) of the Communications Act of 1934, as amended. As such, the standard urged upon this Commission by Western Wireless is patently flawed, and should be rejected.

Relatedly, Western Wireless relies upon a New York Public Service Commission Order Denying Petition because the suspension and/or modification requests were “unsupported” as to technical infeasibility. (Western Wireless brief, p. 24). As Western Wireless has earlier recognized, however, those state decisions are not binding upon the Commission, but do provide some “guidance” as to the findings of other commissions. (Western Wireless brief, p. 21). In this vein, the Nebraska Public Service Commission’s Order Granting Suspension, Application Nos. C-3096 et seq. is at least as persuasive as a decision from a more urbanized state like New York. In Nebraska, the Commission found that, absent direct connects, intermodal LNP between a

CMRS provider and a local exchange carrier "...is technically infeasible at this time..." *Id.*, p. 7.<sup>2</sup>

In sum, the legal standard urged upon the Commission by Western Wireless is flatly unlawful. The Commission may easily find that LNP implementation is technically infeasible, just as have Nebraska *supra*, and the Mississippi Public Service Commission. See, Order, *Petition of Mississippi Incumbent Rural Telephone Companies for Suspension of Wireline to Wireless Number Portability Obligations Pursuant to Section 251(f)(2) of the Communications Act of 1934, as amended*; 03-UA-918.

---

<sup>2</sup> Indeed, the value of other state decisions is probably best appreciated as a whole. For instance, Western Wireless' brief earlier points to an Arizona decision for the proposition that an end user cost of \$2.93/month was insufficient to constitute a significant adverse economic impact. Western Wireless brief, pp. 21-22. On the other hand, the Nebraska Order, referred to above, found surcharges ranging from \$0.64 to \$12.23, monthly, to all be excessive. *Id.*, p. 11. The Commission may review a more complete record of state activity, including a state-by-state survey of LNP suspension activity and decisions in the states, compiled by NeuStar and the National Association of Regulatory Utility Commissioners ("NARUC"), updated as of June 22, 2004. While an exact count is difficult, and the reader can draw his or her own conclusions, the summary report indicates that approximately 250 LNP suspension requests have been submitted in 38 states on behalf of approximately 786 LECs. It also appears that as of June 22, 2004, approximately 150 companies have been granted LNP suspensions for various periods of time; approximately 53 LECs were denied suspension requests; approximately 446 LECs were granted temporary suspensions while the overall merits of their applications are being considered; approximately 62 companies have LNP suspensions pending but have not been granted temporary relief during the interim period; and 75 LECs have withdrawn their petitions prior to final state commission action.

Of course, the status of that activity in each state is different and is based on the facts and circumstances of the carriers in those states, the specific suspension requests of those carriers, and the specific judgements made by the individual state commissions. Regardless of how one might tabulate the activity based on a review of survey, the majority of those states that have pending suspension requests have granted some relief to the rural LECs. And for the minority of the states that have denied the LNP suspension requests, it is not surprising that the state commissions have struggled with their decisions as a result of the FCC's less than adequate handling of its confusing LNP orders, the obfuscation of the wireless carriers, and the uncertainty surrounding the consequences of the unresolved issues.

Western Wireless' final argument on the subject of statutory standards concerns the public interest standard. This argument is addressed later in this Reply Brief.

**PETITIONERS HAVE MET THE REQUIREMENTS  
OF SECTION 251(F)(2)(A)(1).**

Pursuant to Section 251(f)(2)(A)(1), Petitioners have demonstrated that a suspension or modification of the LNP requirement is necessary “to avoid a significant adverse economic impact on users of telecommunications services generally.” As demonstrated in the Post-Hearing Brief (Brief) of Petitioners and supported by the cost exhibits and testimony filed by each Petitioner, each Petitioner has presented detailed information concerning the known costs that will be incurred to implement LNP, including switch software and hardware costs, LNP service order and query costs, and the technical and administrative costs associated with implementing LNP. As indicated by Staff in its Brief, “even without transport costs, the costs to implement LNP are considerable.”<sup>3</sup> Moreover, as stated by Staff and demonstrated by Petitioners, these costs will impact users of telecommunications services because they will be recovered either through the federal LNP surcharge on such users or increases in local rates.

Staff's Brief confirms Petitioners' argument that the only party to dispute the Petitioners' cost showings was Western Wireless and that Western Wireless only disputed a few cost elements. Even where Western Wireless did dispute certain cost elements, Staff confirms that Western Wireless' estimates of the cost of LNP, in many cases, are fairly close to the Petitioners' estimates.

Further, in its Brief, Staff supports the Petitioners' cost estimates disputed by Western Wireless.<sup>4</sup> Staff also supports the per-line, per-month impact of LNP as presented by the Peti-

---

<sup>3</sup> Staff's Brief at 7.

<sup>4</sup> Id. at 17-31.

tioners.<sup>5</sup> Accordingly, Petitioners ask the Commission to find that the Petitioners' estimates of the known cost of providing LNP are reasonable and accurate. Further, the Petitioners ask the Commission to find that the estimated known per-line, per-month impact of LNP is as follows for each Petitioner (Petitioners have grouped the companies following the method used by Staff in its Brief):

GROUP 1

Faith \$3.10  
Tri-County \$3.03  
Stockholm-Strandburg \$4.99 to \$5.58  
Kennebec \$3.45  
Western \$3.97

GROUP 2

Armour/Bridgewater/Union \$1.44  
Roberts County/RC \$1.23  
Beresford \$1.27  
McCook \$1.66  
West River \$0.93 to \$1.04  
Valley \$0.67  
Midstate \$1.00  
Sioux Valley \$0.71  
Santel \$0.78 to \$0.87

GROUP 3

Brookings \$0.74 to \$0.83  
ITC \$0.54 to \$0.61  
Venture \$0.55 to \$0.61  
Golden West/Vivian/Kadoka \$0.32  
Alliance/Splitrock \$0.73

In their Brief, Petitioners argue that they meet the requirement of Section 251 251(f)(2)(A)(1) because the known per-line, per-month impact of LNP as reflected above would impose "a significant adverse economic impact on users of telecommunications services generally." Although Staff has grouped the Petitioners' into three groups depending on its evaluation of the cost of LNP versus demand, it appears that Staff supports the conclusion that all of the Pe-

---

<sup>5</sup> Id.

tioners, even those whom Staff recommends should be required to implement LNP, have met this requirement. Thus, for Group 1, Staff states that the Petitioners' costs are "high."<sup>6</sup> Similarly, for Group 2, Staff states that the costs "are still considerable."<sup>7</sup> For Group 3, Staff states that "[g]iven the lower costs and higher expected demand, Staff does not believe that these companies meet the public interest standard." (emphasis added).<sup>8</sup> Thus, even for the Petitioners in Group 3, it appears that Staff found that the implementation of LNP should not be suspended because the Petitioners do not meet the public interest requirement in Section 251(f)(2)(B) and not because they do not meet the requirements of Section 251(f)(2)(A)(1) and (2).

In addition to the known costs of LNP, the Petitioners also presented evidence that there are a number of outstanding issues that could make the adverse economic impact of LNP on users of telecommunications services even greater. For example, the FCC is considering whether to shorten the porting interval for wireline carriers, which would significantly increase the cost of LNP. (Davis Ex. 1 pp. 18, 19; ITC Ex. 3 p. 18; Brookings Ex. 3 pp. 18, 19; Stockholm Ex. 3 p. 19; Venture Ex. 3 pp. 18, 19; West River Ex. 3 p. 18; SDTA Ex. 1 pp. 15, 36; Tr. pp. 897, 898) The FCC also is considering options to require wireless to wireline porting, which also would increase the cost of LNP.

In its Brief, Staff acknowledges that issues such as these could further impact the cost of LNP. As stated by Staff, "there are significant costs associated with the implementation of LNP and there are unresolved issues that could further impact those costs."<sup>9</sup> Staff also states that the Petitioners in Group 2 "would benefit from additional certainty in the process which would result

---

<sup>6</sup> Staff's Brief at 16.

<sup>7</sup> Id.

<sup>8</sup> Staff's Brief at 17.

<sup>9</sup> Staff's Brief at 8.

when the FCC acts on issues such as porting intervals and transport routing issues.”<sup>10</sup> While Staff is correct with respect to Group 2, all Petitioners, including those in Group 3, would benefit from more certainty. Thus, even if the known per-line, per-month cost of LNP for certain Petitioners as stated above was not sufficient to meet the standard of Section 251(f)(1)(A)(1), the known cost plus the additional adverse economic impact that would be imposed by the outstanding issues supports a finding that the standard has been met.

The arguments of Western Wireless and Midcontinent in opposition to the evidence presented by Petitioners are wrong and should be rejected. In addition to the few cost elements challenged by Western Wireless, Western Wireless argues that the Commission should reject the cost studies of all Petitioners that filed a combined study for more than one company. According to Western Wireless, a combined study does not meet the requirement of Section 251(f)(2)(A) and, therefore, such companies have not met their burden. Western Wireless is simply wrong. The plain language of Section 251(f)(2)(A) does not require separate filings or impose a “penalty” when separate filings are not made. Rather, this Commission has the expertise to evaluate the merits of the information presented by each Petitioner for the purposes offered. Further, the Petitioners that filed consolidated cost studies did so because of the consolidated nature of the companies’ operations. Therefore, a consolidated filing more accurately reflects the costs that the individual companies will incur, and the resulting impact on their end users. Petitioners note the irony of Western Wireless’ argument in that elsewhere, Western Wireless argues that the Petitioners’ cost studies are flawed because unrelated Petitioners did not assume economies of scale by consolidating certain functions with other Petitioners. Yet, when affiliated entities with common operations prepare cost studies to reflect those common operations, Western Wireless argues that the studies should be rejected.

---

<sup>10</sup> Staff’s Brief at 16.

Midcontinent's position also is wrong and should be rejected. Midcontinent argues that the cost of transport, which primarily involves intermodal LNP, is significant and possibly even greater than the other costs associated with LNP. Therefore, Midcontinent incorrectly concludes that "the cost of providing intramodal LNP is not such that it represents an adverse economic impact on users of telecommunications services generally, [or] imposes a requirement that is unduly economically burdensome..."<sup>11</sup> Midcontinent reaches this faulty conclusion by simply ignoring the Petitioners' cost studies and brief which clearly show that the cost of LNP is significant even when the cost of transport is not included and that the non-transport LNP costs would impose "a significant adverse economic impact on users of telecommunications services generally." As demonstrated earlier in this reply brief, it appears that Staff supports Petitioners on this point.

Furthermore, Midcontinent has ignored the cost exhibit presented by ITC which shows that the per-line cost of providing LNP for Midcontinent in the Webster exchange is even greater than the cost of company-wide LNP. This is so primarily because most, if not all, of the non-transport costs of LNP would have to be incurred to provide LNP in only one exchange. Those costs, however, only could be assessed to the lines in the Webster exchange and not all ITC lines. Accordingly, contrary to Midcontinent's position, the cost of providing intramodal LNP as requested by Midcontinent imposes an even greater adverse economic impact on users of telecommunications services generally.

---

<sup>11</sup> Midcontinent's Post Hearing Brief at 3.

Thus, Petitioners ask that the Commission find that each Petitioner has met the requirement of Section 251(f)(2)(A)(1) and that a suspension of the LNP requirement is necessary “to avoid a significant adverse economic impact on users of telecommunications services generally.”

**PETITIONERS HAVE MET THE REQUIREMENTS OF SECTION 251(F)(2)(A)(2).**

Petitioners also have met their burden under Section 251(f)(2)(A)(2) and demonstrated that a suspension of the LNP requirement is necessary “to avoid imposing a requirement that is unduly economically burdensome.” It is unduly economically burdensome to require Petitioners to implement LNP when a number of implementation issues are not resolved. It would be more efficient and less costly to implement LNP only once, after the LNP parameters are more certain, rather than require carriers to implement LNP when important issues are unresolved (such as the requirements of wireless to wireline porting), or could be changed (such as whether the porting interval will be reduced).

Changes to the LNP requirements that would impose new LNP costs after Petitioners are required to implement LNP also will impose a requirement that is “unduly economically burdensome” because it is very likely that Petitioners would be unable to recover these costs through the authorized federal LNP surcharge. Under the current FCC rules pertaining to the establishment of a “monthly number-portability charge” the charge is to be “levelized” over five years, or in other words must remain constant over that period. There are no provisions in the FCC rule relating to LNP cost recovery (47 C.F.R. § 52.33) that permit revision to the established monthly number portability charge, should actual LNP related costs change over the 5 year period that the charge is to be in effect and the FCC has indicated that requests to change the surcharge will not be granted readily.

As shown, LNP implementation also would result in the assessment of a new LNP surcharge on end users and could increase local rates. These actions would make Petitioners' service offerings less competitive with the services provided by wireless and other competitive carriers. In addition, if the total cost of LNP is assigned to Petitioners' subscribers through a surcharge and local rate increases, some segment of their subscribers may discontinue service or decrease the number of lines to which they subscribe. The resulting reduction in line count would increase further the per-subscriber cost of LNP, which, in turn, could lead to more rate increases followed by additional losses in lines. Ultimately, Petitioners may not be able to recover the costs of LNP from their subscribers, which would reduce the Petitioners' operating cash flow and profit margins.

Finally, if the appropriate transport arrangements are not implemented, wireline to wireless porting under current routing protocols would impose an unduly economically burdensome requirement by making the network less efficient and by confusing consumers which could result in reduced calling. If direct connections are not established, calls to ported numbers will be routed to an interexchange carrier and the calling customer will incur a toll charge. The local exchange network also will be less efficient as a result of porting because end users who continue to dial a ported number on a seven-digit basis will likely receive a message that the call cannot be completed as dialed, or a message instructing the party to redial using 1+ the area code. Thus, callers would have to dial twice, with the resulting network use, to place one call.

Thus, Petitioners ask that the Commission find that each Petitioner has met the requirement of Section 251(f)(2)(A)(2) and that a suspension of the LNP requirement is necessary "to avoid imposing a requirement that is unduly economically burdensome."

**PETITIONERS SHOULD NOT BE REQUIRED TO TRANSPORT  
CALLS BEYOND THE LOCAL SERVICE AREA.**

Petitioners have demonstrated that they have no legal obligation to transport traffic to points beyond their service territories, whether the traffic is associated with a ported number or not. Thus, under the provisions of 47 U.S.C. §251(c)(2)(B), incumbent LECs are required to provide interconnection only at a “technically feasible point within the carrier’s network.” The Petitioners’ position also is supported by the plain language of the *November 10 Order*.<sup>12</sup> In its Order, the FCC acknowledged that LNP raised certain routing issues for rural carriers where no direct connection exists and that these issues would be addressed in a pending Petition for Declaratory Ruling filed by Sprint Corporation.<sup>13</sup>

In its Brief, Staff states that “the Commission should find that an RLEC is *not* responsible for the cost of transporting LNP traffic outside of its exchange area” and that “[a] local exchange company should not be required to transport local exchange calls beyond its local exchange area.”<sup>14</sup> Petitioners wholeheartedly agree with and support this aspect of Staff’s recommendation. Accordingly, Petitioners urge the Commission to modify their LNP obligation pursuant to Section 251 of the Act to clearly state that each Petitioner is not required to transport calls beyond its local exchange area.

Staff further states, however, that the Commission should not require direct connections, nor should it require any specific routing method. Rather, “the RLEC and the requesting carrier will negotiate the method of transport, knowing that if the routing method requires transport of the call outside of the RLEC’s area, the requesting carrier would be responsible for those trans-

<sup>14</sup> Staff’s Brief at 10.

port costs.”<sup>15</sup> Staff states that it believes “that the settlement agreements in James Valley and CRST demonstrate that the parties are in the best position to determine how to route LNP traffic.”<sup>16</sup>

In connection with this aspect of Staff’s recommendation, Petitioners make the following comments. First, it must be remembered that in the James Valley and CRST settlements, Western Wireless either had or agreed to establish a direct connection with the LEC. For example, the Stipulation between CRST and Western Wireless, and approved by the Commission, states that “[t]he Parties agree that CRST shall deliver calls to numbers ported to a wireless carrier as local calls only when the wireless carrier establishes a direct connection with CRST.”<sup>17</sup> Further, the Stipulation states that CRST will offer the same terms and conditions to other wireless carriers requesting LNP. If a wireless carrier rejects the terms and conditions, i.e., refuses to establish a direct connection, then the parties can petition the Commission for modification of the Order entered pursuant to the Stipulation.

Second, although there are other potential transport options, such as Western Wireless’ proposal, none has been fully examined by the Parties to establish that they are feasible. Therefore, if a direct connection is not required, it is not clear that negotiation of this issue will be achieved easily or quickly. In other words, for any carriers that are required to implement LNP, it is not a foregone conclusion that a successful negotiation of the transport issue will be achieved. This could result in a LEC spending thousands of dollars to implement LNP before calls to ported numbers can be transported as local calls. And, as established by Petitioners, if

---

<sup>15</sup> Id. at 11.

<sup>16</sup> Id.

<sup>17</sup> Stipulation, Docket No. TC04-085, at 1.

such transport is not established, calls to ported numbers will be routed to interexchange carriers and assessed a toll charge. Petitioners believe that such a result is not in the public interest.

Therefore, Petitioners request that the Commission modify the Petitioners obligation to only require the implementation of intermodal LNP if the wireless carrier establishes a direct connection and after the Parties have successfully negotiated transport. In the alternative, a study group could be convened to examine the proposed transport options that wireless carriers request to determine the feasibility of such options. If a study group is convened, Petitioners request that the Commission suspend the LNP requirement until an acceptable transport option, or options, is determined through the study group process.

If the Commission does not accept Staff's recommendation, then as demonstrated by Petitioners' in their Brief, cost exhibits and testimony, the possible imposition of transport responsibility on them does nothing but further support their suspension and/or modification requests because it drives up costs, both to customers and/or the companies themselves.

The Petitioners' cost exhibits contain estimates for the recurring and non-recurring cost of transport, which essentially is the cost of installing facilities to enable calls to ported numbers to be routed as local calls. Western Wireless, and to some extent Staff, criticize the way the Petitioners assumed transport facilities would be implemented, and the resulting cost of those facilities. Western Wireless also argues that the Petitioners' cost exhibits should be rejected because they are based on the interconnection agreements and such agreements are not required.

Petitioners maintain that the criticisms are unfounded. As demonstrated, Petitioners based their transport methodologies on current network configurations and relationships and, therefore, they are reasonable. Contrary to the argument of Western Wireless, Petitioners do not maintain that interconnection agreements are required for LNP. Nor do they argue that current

interconnection agreements could not be modified (although Petitioners note that Western Wireless has not requested modification of any of the agreements it signed with Petitioners). However, the fact remains that Petitioners cannot unilaterally change the current agreements that they have with Western Wireless and other wireless carriers. Therefore, any transport scenario, such as the one proposed by Western Wireless, that does not conform to current arrangements between carriers and its associated costs, are pure speculation and cannot be the basis for a reasoned and rational decision.

Staff also comments on the number of wireless carriers for which Petitioners calculated transport costs. This is a factor in the cost of transport because every wireless carrier that requests LNP will require transport facilities and, therefore, the more wireless carriers the greater the cost of transport. What must be remembered when considering this issue, is that once a LEC is required to provide LNP, it is required to provide it to all requesting carriers (unless, of course, the Commission otherwise has modified the LEC's requirement). Therefore, the Petitioners were conservative in their estimates of transport to the extent that they were limited to wireless carriers currently operating in the LECs service area when in fact the Petitioners could face transport costs for all wireless licensees in their service area.<sup>18</sup>

Staff notes that Western Wireless' projected cost of transport is less than Petitioners. In addition to the other objections to Western Wireless' transport proposal (namely, Western Wireless' routing methodology does not currently exist; it involves an entity not a party to this proceeding; and it has not been shown to be feasible), Western Wireless' projected cost of the proposal does not consider the additional financial impacts that would be imposed on rural LEC op-

---

<sup>18</sup> There is a potential of eleven (11) or more CMRS providers in each geographical area consisting of 2 Cellular, 6 PCS, and 2 700 MHz, and at least 1 SMR. The Petitioner's analysis only included transport costs for carriers (like WWC, Verizon, Sprint, Nextel, and others) that have announced intentions of entering the market in the next five (5) years.

erations. Specifically, Western Wireless' proposal for transport not only would make Petitioners responsible for the costs of transport to the Qwest access tandem, but, by allowing for a bypass of the existing toll network, it also would affect Petitioners' access and toll revenues.<sup>19</sup>

Western Wireless suggested at the hearing that the impact of its transport proposal would be small because of the small number of expected calls to ported numbers. However, while the number of calls to ported numbers (served by wireless carriers) is expected to be small given the lack of demand for intermodal LNP, this is a fraction of the total traffic that is at stake. Thus, any decision imposing transport responsibilities on rural LECs beyond their existing network would impact all traffic—including calls to wireless users who do not have a ported number, calls to CLECs, and calls to Qwest customers.

Thus, it is clear that the transport issue not only would increase the cost of LNP, it would have a tremendous adverse impact on end-users and Petitioners. Accordingly, Petitioners request that this Commission conclude, as the Nebraska Commission recently has, that indirect connections are technically infeasible presently, and that the resulting costs "...would either be an additional significant adverse economic impact on end users or would be an economic burden on the local exchange carriers..." *Nebraska Order* at 7, 10-11.

**GRANT OF THE REQUESTED SUSPENSIONS/MODIFICATIONS IS CONSISTENT WITH THE PUBLIC INTEREST, CONVENIENCE AND NECESSITY**

As noted in Petitioners' Brief, in addition to meeting at least one of the criteria listed in 47 U.S.C. § 251(f)(2)(A) relating to adverse economic impacts or technical infeasibility, in order for any request for suspensions and/or modification to be granted, it must be "consistent with the public interest, convenience and necessity." (47 U.S.C. § 251(f)(2)(B)). As testified to by Petitioners' and SDTA's witness, Steven E. Watkins, a determination of the public interest relating

---

<sup>19</sup> Brief at 38-39, (see Tr. pp. 385, 391, 425, 399, 400, 405, 406, 413, 414, 422). (Tr. pp. 424) (Tr. pp. 204, 478). (Tr.

to the LNP suspension petitions that have been filed inherently involves a cost versus benefit analysis. (SDTA EXH 1 p. 8, TR pp. 497-505). Commission Staff in its Brief indicates agreement with this type of analysis, stating that “the Commission needs to conduct a cost versus demand analysis when considering the public interest.” (Staff’s Brief p. 7). With regard to the additional “public interest” criteria that must be applied, Petitioners believe that the evidence presented in this matter leaves no doubt that the public interest is, in fact, best served by granting each of the requested LNP suspensions.

Western Wireless contends in its brief that “no where within Petitioners’ submitted testimony” was it shown “how providing LNP services within their service area would be inconsistent with the public interest, convenience and necessity.” Petitioners find this statement incredible. There is overwhelming evidence in the record before this Commission to support an affirmative public interest finding with respect to each of the LNP suspension petitions that has been filed.

As all parties seem to agree, fundamental to any analysis of the benefits of LNP is a review of evidence relating to demand for the service. It is clear from the record in this matter that there presently is little, if any, demand for intermodal LNP within any of the Petitioners’ service areas. Petitioners presented evidence from the national administrator of LNP, NeuStar, that confirms little demand for intermodal LNP even in non-rural areas. Petitioners also presented evidence that demand in rural areas is likely to be less because of the poor wireless service quality in rural areas. Petitioners also presented company specific evidence that few or no customers have requested or inquired about LNP even though it was widely reported in the press. Petitioners note that even though Western Wireless has implemented LNP, it presented no evidence concerning the number of ports it has experienced for wireless to wireless porting or for intermodal

---

pp. 266, 272-274, 482).

porting. Further, even though Western Wireless operates in all of the Petitioners' service areas, it presented no evidence to indicate that any of its customers or potential customers have requested LNP in those service areas. Petitioners believe that the Commission can consider Western Wireless' failure to present contrary evidence as further proof in support of Petitioners' claims on this issue.

In addition, Petitioners presented evidence that the costs of LNP are significant and, it is apparent from the record in this matter, at the present time there are a number of substantial issues related to the provisioning of LNP that have not yet been resolved by the FCC, which will impact further LNP implementation costs. Given these unresolved issues, it is obvious that the Commission cannot at the present time even quantify the full cost of LNP implementation and, consequently, cannot evaluate what would be the full end-user and/or rural carrier impacts.

Under these circumstances, given the almost complete lack of demand for intermodal LNP in the Petitioners' service areas and taking into account the significant cost of LNP and the unresolved issues relating to LNP that will affect LNP implementation costs further, Petitioners cannot understand how this Commission could reasonably determine that granting the requested suspensions is not in the public interest. For all of the reasons set forth in Petitioners' Brief, there is good reason to conclude that granting each of the LNP suspension petitions would be consistent with the public interest standard established under the federal law.

In its brief, Western Wireless continues to suggest that this Commission in its review of the public interest must give primary emphasis to the promotion of competition. As pointed out in Petitioners Brief, although one purpose of the Telecommunications Act of 1996 was to promote competition for local exchange services, a second primary purpose was to protect universal service. Further, Congress realized that competition, as promoted by the FCC, may not be the

best course in rural areas and the provisions of Section 251(f)(2) were clearly put into the Act for this reason. State Commissions are specifically given authority under Section 251(f)(2) to suspend and/or modify any of the requirements contained in §§ 251(b) and 251(c) of the Act (including interconnection and other service requirements that were specifically imposed for the purpose of promoting local service competition). Indeed, the very purpose of the suspension and modification provisions contained in Section 251(f)(2) is to allow state commissions to override, in effect, rules related to competition. This being the case, it is obviously insufficient, for purposes of addressing Section 251(f)(2)'s public interest standard, to claim that the implementation of LNP is necessary to promote competition.

Furthermore, the claims of competitive benefits made by Western Wireless are simply not substantiated by the evidentiary record because it is clear that there is little, if any, demand for LNP in the Petitioners' service areas. If there is no demand for the service, how can it reasonably be determined that consumers would benefit by making the service available? How does diverting carrier resources in order to bring consumers a choice they do not want provide a consumer benefit?

The Nebraska Public Service Commission, in recently granting a suspension until January 20, 2006, to many of the rural local exchange carriers in that state, specifically addressed claims made by Western Wireless that LNP is necessary to provide greater consumer choice. Order Granting Suspension, Nebraska Public Service Commission (*Nebraska Order*) dated July 20, 2004, Application Nos. C-3096 *et. Seq.* The Nebraska PSC concluded, "[w]hile the Commission acknowledges that introduction of competition into telecommunications markets is a key policy of the 1996 Telecommunications Act, without any evidence that demand for intermodal

LNP exists and thus, that consumer choice is being thwarted, this Commission must assign greater weight to another Congressional policy of the Act.” See, *Nebraska Order*, page 14.

In addition, the claims of Western Wireless that this Commission, in conducting its public interest analysis, must give emphasis to the competitive benefits of LNP are inconsistent with the recent letter issued by FCC Chairman Michael Powell which speaks to the state review of LNP waiver request under the provisions of 47 U.S.C. § 251(f)(2). (Venture Exh. No. 4). In that letter, directed to the Honorable Stan Wise, President National Association of Regulatory Utility Commissioners, Chairman Powell specifically referenced concerns about the possible economic burden that intermodal number porting may place on LECs that are small businesses, particularly those in rural areas; and it further urged state commissions in their review under Section 251(f)(2) to “consider the burdens on small businesses in addressing those waiver requests.” Very clearly, this letter confirms that the analysis required under Section 251(f)(2) must go beyond simply considering the competitive benefits and must also focus on costs/burdens associated with providing the telecommunications service.

To support its argument that granting the requested suspensions would not be in the public interest, Western Wireless also selectively cites to decisions of the New York Public Service Commission and Michigan PUC indicating that those states have denied requested LNP suspensions on public interest grounds. As testified to by Mr. Watkins, there is LNP suspension activity in many states throughout the United States and, contrary to the perception that Western Wireless attempts to create, the majority of states have found merit in suspending LNP obligations for the smaller LECs. (SDTA Exh. No. 2, pp. 6, 7). Western Wireless conveniently fails to mention the recent Nebraska Order, where our neighboring Nebraska PSC determined that each LNP suspension applicant had met its burden of proof and shown that “suspension of the re-

requirements of the Intermodal Order is consistent with the public interest, convenience, and necessity.”<sup>20</sup> Similarly, there is no mention of the “Finding and Order” of the Ohio Public Utilities Commission that granted a temporary waiver to the applicant rural LECs in that state “until the LNP obligations of the small, rural local telephone companies and the role of the state commissions is clarified” by the FCC. In the Matter of the Application of the Following Companies for Suspension or Modification of the Federal Communications Commission’s Requirement to Implement Wireline-Wireless Number Portability Pursuant to 47 U.S.C. § 251(f)(2): Minford Telephone Company, et. al., Case Nos. 04-428-TP-UNC, et. Seq. (Ohio Order). The Ohio Commission, in considering the public interest, specifically commented on all of the uncertainties presently surrounding intermodal LNP implementation, concluding that “without completing [its] financial review and without knowing whether wireline-to-wireless LNP is something which applicant’s customers would find beneficial, it is hard for the Commission to judge at this point whether the benefits to be gained by applicant’s customers with intermodal LNP, outweigh the potential increased rates applicants’ customers will have to pay.”<sup>21</sup> Contrary to the picture portrayed by Western Wireless, many states have already granted a waiver or suspension of the LNP requirements to rural carrier applicants operating within their jurisdictions. The NeuStar report, referenced herein, confirms this fact.

Western Wireless in its brief criticizes the testimony of Mr. Watkins as being too “broad and general.” It is alleged that the testimony is “not derived from any kind of review of these Petitioners’ situations or even the State of South Dakota” and argued that the testimony should be rejected by this Commission. These statements challenging the foundation and/or value of Mr. Watkins are ridiculous. First, Petitioners would note that the argument is surprising because it

---

<sup>20</sup> *Nebraska Order* at 14.

<sup>21</sup> *Ohio Order* at p. 16.

appears that Western Wireless is now attempting to make some foundational argument related to Mr. Watkins' testimony, yet at the hearing prior to the admission of Mr. Watkins' testimony no similar argument was presented. Western Wireless' counsel did not object to the admission of Mr. Watkins' prefiled testimony. More importantly, however, these statements simply are a misrepresentation of the record insofar as they attempt to portray Mr. Watkins as being unfamiliar with the South Dakota Petitioners' circumstances and unable to testify as to the actual impact that LNP implementation issues will have on each of their operations.

Substantial information is presented on the record as to Mr. Watkins' background as an individual whose entire career has been devoted to serving smaller telecommunications firms which provide service to small-town and rural areas. (SDTA EXH 1, Attachment A, pp. 1, 2). He has since 1996 been self employed as a consultant assisting specifically smaller, rural, independent local exchange carriers and competitive local exchange carriers in their analysis of regulatory and industry issues, including issues related to universal service mechanisms, interconnection requirements, and cost recovery. Prior to that time he was employed by the National Telecommunications Cooperative Association (NTCA) for 12 years working as Senior Industry Specialist. NTCA is a national trade association representing approximately 500 small, locally owned and operated rural telecommunications providers. Before his employment began with NTCA, Mr. Watkins worked for the consulting firm of John Staurulakis, Inc.. which also specializes in providing regulatory assistance to small local exchange carriers. Mr. Watkins' background information indicates that he has 28 years of experience in the telecommunications industry, all focused on assisting small and rural LECs. To argue as Western Wireless has that Mr. Watkins' testimony and the information and conclusions provided therein are not based sufficiently on the circumstances faced by the Petitioners in this case, ignores Mr. Watkins' extensive

experience in the rural telecommunications industry, and his familiarity gained through that experience with South Dakota's rural carriers.

In claiming that Mr. Watkins' testimony is not specific to any Petitioner, Western Wireless also claims that Mr. Watkins did no "independent evaluation" of any of the Petitioners. Apparently, Western Wireless counsel reaches this broad conclusion from the following question and answer occurring during Western Wireless' cross-examination of Mr. Watkins during the hearing:

Q. Okay. And as I have read your testimony, nowhere in your testimony do you single out a specific Petitioner and talk about how LPN may impact it specifically financially.

A. No. (TR p. 509.)

Petitioners strongly object to the claims by Western Wireless suggesting that Mr. Watkins did no evaluation, at all, concerning the South Dakota Petitioners. Western Wireless has obviously exaggerated the above cited answer given by Mr. Watkins, and has completely ignored the fact that Mr. Watkins' testimony was provided in conjunction with the testimony of other Petitioners, and that Mr. Watkins' testimony concerning specifically the costs of LNP for rural carriers in South Dakota, the consumer demand for LNP in South Dakota's rural areas, and the transport and routing issues is based on the information provided by the testimony of other Petitioner witnesses. A review of Mr. Watkins' testimony indicates very clearly that this is the case. SDTA EXH pp. 9, 10, 14, 15, 19, 20, 36, 37; TR p. 512, 518. Mr. Watkins reached his conclusions that support a finding that each LNP suspension request meets the federal standards, including the public interest standard, based not only on his general knowledge as an expert working for rural carriers across the United States, but also based on carrier-specific information provided by the other Petitioner witnesses in these proceedings. It is simply wrong for Western

Wireless to suggest that Mr. Watkins' testimony is non-specific and not based on the actual circumstances faced by the Petitioner LECs.

With regard to Staff's analysis of the public interest, convenience, and necessity standard, which is designated by Staff as the "final standard" under 47 U.S.C. §251(f)(2)(B) (Staff Brief at 6), Petitioners concur in part with Staff's analysis and disagree in part with Staff's analysis. Further, as discussed below, Petitioners concur in part with Staff's application of the public interest test, but Petitioners disagree with Staff's conclusion that some companies should not receive a suspension.

#### A. Cost/Benefit Analysis

Petitioners concur that this Commission must determine that a suspension or modification is consistent with the public interest, convenience, and necessity. Petitioners also concur that the public interest analysis involves a cost/benefit analysis:

The Commission believes that its determination of the public interest in these cases inherently involves a cost versus benefit analysis. Nebraska Public Service Commission Order Granting Suspension, Page 13. (July 20, 2004) ("Nebraska Order").

The Commission must consider the overall public interest in determining whether the requested relief should be granted . . . it is hard for the Commission to judge . . . whether the benefits to be gained by applicants' customers with intermodal LNP, outweigh the potential increased rates applicants' customers will have to pay. Public Utilities Commission of Ohio, Case Nos. 04-428-TP-UNC through 04-449-TP UNC, Finding and Order, Page 16 (July 20, 2004) ("Ohio Order").

#### 1. Lack of Demand

Petitioners further concur with Staff that "[a] critical element in the analysis of whether LNP requirements should be suspended is whether the costs of LNP can be justified given the demand for the service." (Staff Brief at 10). "An analysis of the benefits of such implementa-

tion turns on whether there is a demand for intermodal LNP among the telecommunications users served by the applicants.” (Nebraska Order at 13).

Petitioners would point out that the overwhelming evidence presented through prefiled testimony and at the hearing was that, in most cases, there is no demand for LNP.

Stockholm-Strandburg:

Q. And have you had any demand for LNP from your customers?

A. (By Ms. Nowick) No, we have not. (TR 344).

Venture:

Q. . . . have you had very much demand for LNP?

A. (By Mr. Houdek) To my knowledge, no customers have asked for wire-line-to-wireless LNP. (TR 414).

West River:

A. (By Mr. Reisenauer) Being a cooperative or a member-owned organization, our goal is to provide those services that benefit our members. And after reviewing the LNP issues with our board of directors, we determined that the lack of request for porting of wireline number to wireless carrier, the excessive costs associated with implementing local number portability and the obvious lack of benefit to our members it was in our best interest to request a waiver . . . (TR 429).

Q. Do you believe that LNP would be beneficial to your consumers at this point, your customers?

A. I don't believe there's a demand for LNP and I don't believe it's beneficial at this point, no. (TR 446).

Golden West et al.:

A. (By Mr. Law) . . . we feel that the local number portability issue in this Docket is a high-cost, low-demand avenue . . . (TR 770).

Armour et al.:

A. (By Mr. Law) . . . Armour, Union and Bridgewater-Canistota feel that the economic burden of implementing local number portability greatly

outweighs any demand or consumer benefit for these areas . . . (TR 771).

Sioux Valley:

- A. (By Mr. Law) . . . the implementation of local number portability would be an undue economic burden on the company and its consumers for virtually a minimum benefit. (TR 772).

Golden West, Armour, and Sioux Valley:

- Q. What has been your experience with regard to demand by your customers for LNP?
- A. (By Mr. Law) . . . I have received no requests from any customers from the affected companies for local number portability (TR 806).

Alliance – Splitrock:

- A. (By Mr. Snyders) . . . we feel that because of the low customer demand and high cost of LNP we are not interested at this time in implementing LNP. (TR 814).
- Q. If there were demand from your customers for LNP, you would hear about it or know about it, would you not?
- A. That would be correct. (TR 822).

McCook:

- A. (By Mr. Roth) I feel in the absence of customer requests for LNP, the high cost and the low demand of it, McCook Cooperative Telephone should not be required to provide intercompany LNP. (TR 825).

Kennebec:

- A. (By Mr. Bowar) . . . We have conducted a survey and the results overwhelmingly indicate that a majority of my customers do not want to pay for LNP at any price . . . Bottom line, LNP implementation would have an extreme adverse impact with little or no benefit. (TR 949).
- Q. (By Ms. Wiest) What do you think is the main reason for the lack of demand?
- A. The coverage is not good. There's lack of coverage and lack of demand. My customers see no need for this. (TR 947).

Midstate:

- A. (By Mr. Benton) I do not believe implementing wireline-to-wireless LNP is in the public interest based on the fact that Midstate has not received requests to date. The demographics of our area do not support implementation and internally we struggle with justifying the cost versus the benefit of implementing LNP to our members. (TR 969).
- Q. (By Mr. Wiczorek) Do you understand that Mr. Davis has projected 60 ports a year for your company for the first five years of LNP?
- A. I think he had to populate it with something. I think zero would have raised a red flag. (TR 973).

Beresford:

- A. (By Mr. Hansen) Since we have received no customer requests for LNP it would seem that there is little interest, necessity or customer demand for the convenience of LNP. As such, it would seem to be in conflict with the public interest to require the implementation of LNP at this time because of the kind of costs that would be involved. (TR 982).
- Q. (By Mr. Lewis) . . . you said that basically there's no customer interest for LNP, correct?
- A. To the best of my knowledge, no. (TR 985).

Roberts County:

- A. (By Ms. Harrington) . . . we have had no requests or demand for local number portability in our areas, and the cost of implementing it is significant and we feel that would be a detriment to our customers. (TR 1044-45).

See also Santel Ex. 1, Page 3. The managers for ITC, Swiftel, and Valley indicated their respective companies had received one or two inquires regarding wireline to wireless LNP. (TR 43, 294, 748).

While Petitioners appreciate Staff's point that "accurately estimating LNP demand, especially for wireline to wireless ports, is fairly difficult," (Staff Brief at 13), the overwhelming evi-

dence presented at the hearing by the managers who are in daily contact with their customers is that there is virtually no demand for LNP. Evidence of demand was also uncontroverted by Intervenors. WWC did not supply any company-specific empirical evidence on the issue of demand, and Midcontinent presented no evidence whatsoever on the issue.

Staff appears to ignore this plain, unrefuted evidence of clear lack of demand for LNP, which is paramount to a determination of public interest. “An analysis of the benefits of (LNP) implementation turns on whether there is a demand for intermodal LNP among the telecommunications users . . . ” (Nebraska Order at Page 13, emphasis added). Thus, Staff’s arrival at “a more realistic number” that “might be around one and one-half percent for the more densely populated areas that have adequate cellular coverage,” is not consistent with the evidence presented at the hearing, which indicates no or minimal demand. (Staff Brief at 13, emphasis added).

## 2. Other Factors Affecting Public Interest

While demand for LNP by end users is paramount, other factors can affect that demand, which ultimately has an impact on application of the public interest test.

### (a) Density of population in an exchange.

Petitioners concur with Staff’s acknowledgment that the density of population in an exchange can affect the cost/benefit analysis of implementation of LNP (Staff Brief at Page 13). Despite this acknowledgment, however, Staff fails to consider density of population in its application of the public interest benefit. As will be discussed more fully below, the number of access lines a company has does not mean that the density per line is greater. Golden West, for example, has a high number of access lines, but very low density per line. (Golden West Ex. 1 and 2).

### (b) Adequacy of cellular coverage.

Another factor that clearly impacts demand for LNP is the adequacy of cellular coverage, which Staff also acknowledges at one point in its Brief (Staff Brief at 13). In addition to the Commission's personal knowledge of the quality of cellular service in rural, low-density areas of South Dakota, there was evidence submitted at the hearing and in prefiled testimony of lack of cellular service in some of the areas and its effect on demand for LNP. For example, Marjorie Nowick from Stockholm-Strandburg testified to people making cellular calls into her service area because of "better call service" in bigger cities, while landline service is "better quality" within her service area. (TR 361). Rod Bowar from Kennebec cited lack of coverage as a reason for no demand by his customers for LNP.

Q. (By Ms. Wiest) What do you think is the main reason for the lack of demand?

A. (By Rod Bowar) The coverage is not good. There's lack of coverage and lack of demand. My customers see no need for this. (TR 947).

Additional evidence of lack of cellular coverage came from Valley's manager, Steve Oleson: "Valley's service area has approximately 25 percent or less cellular coverage . . ." (TR 740-741).

(c) Unresolved FCC issues.

It is uncontested that there are issues relating to LNP and provisioning of LNP that have not yet been resolved at the FCC level. The unresolved issues clearly impact the cost/benefits analysis. This has been recognized by other State Commissions when dealing with suspension or modification requests.

In balancing the costs and benefits at stake in this case . . . we believe that the Applicants continue to face the technical obstacles observed by the FCC in its January 16, 2004, Order . . . by granting the suspension requested, the carriers may avoid wasting resources while the clarification necessary to effectively and efficiently implement wireline to wireless number portability is undertaken on the federal level. Nebraska

Order, Pages 13-14.

[T]he Commission finds that the economic burden to the Independents and their respective end users is not justified until further issues resolution is forthcoming from the FCC and the courts with respect to the Independents' intermodal porting obligations. The *November 10 Intermodal Order* and the *2% Order* do not displace the need for this underlying policy consideration. Instead, the issuance of these decisions underscore the need for the Commission to determine whether the economic burden and the potential adverse economic ramifications for rural telecommunications users are outweighed by any speculative competitive public interest benefits. Mississippi Public Service Commission, 03-UA 918, Order, at ¶15 (May 24, 2004).

Clearly, the impact of future FCC decisions affects the public test, and that applies to all Petitioners.

#### B. Application of Public Interest Test

As noted above, Petitioners concur with some portions of Staff's Application of the public interest test, but disagree with other portions of its application of the public interest test.

Staff's analysis of demand does not take into account the clear and uncontroverted evidence presented by the managers. Instead, Staff appears to review the evidence of cost consultants and arrive at its own "guesstimate" of demand:

A more realistic number might be around one and one-half percent for the more densely populated areas that have adequate cellular coverage. Staff would expect the percentage to be lower in less densely populated areas with less than adequate cellular coverage. (Staff Brief at 13, emphasis added).

Staff's use of the words "might be around" to describe possible number of ports clearly is speculative at best, and fails to acknowledge actual evidence presented of lack of demand.

Further, despite Staff's reference to more densely populated areas and lack of coverage, Staff appears to apply the one and one-half percentage in a straight multiplication of the number of a company's access lines. The illogical result of this methodology is that for all large compa-

nies, Staff recommends denial of suspension, for medium-sized Staff recommends shorter suspension, and for small companies, Staff recommends a longer suspension. That methodology is not a valid comparison. Spreading the costs over a larger number of subscribers is not an accurate application of the cost versus benefit analysis. Furthermore, Staff, for the most part, failed to recognize the other factors it acknowledged affected demand, such as density of population and quality of service. Finally, Staff failed to uniformly apply the unresolved FCC issues to all Petitioners, even though resolution of the issues by the FCC will affect every Petitioner.

Petitioners would submit that Staff failed to apply the public interest test uniformly and consistently to each “group” (arbitrarily assigned) of companies. All carriers clearly established lack of demand. There was no evidence presented that a continued suspension would adversely impact consumers. All carriers demonstrated that LNP is costly. The fact that carriers with larger numbers of subscribers have the ability to spread the costs to more people begs the public interest question. What is the benefit to the consumer? Whether the cost to each consumer in a small exchange computes to more and the cost to each consumer in a larger company may be less because it is spread over a larger group, the fact remains that each consumer ends up paying for a service for which the evidence in the record establishes no demand exists. As stated by one of the managers, “Some of our lower income or elderly people that don’t have a cell phone, don’t ever care to have a cell phone, certainly don’t care to port numbers. You know, you put 25 cents on their bill, that’s too much.” (TR 395).

Further, Petitioners note that Staff proposes a different recommendation for companies for which LNP will impose the same per-line cost and for which Staff estimates demand at the same percentage level (i.e., Brookings and Alliance/Splitrock and Santel and Sioux Valley).

Staff also failed to acknowledge that unresolved FCC issues affect all Petitioners, including the larger carriers for whom Staff recommends no suspension. Petitioners submit that it is in the public interest for all Petitioners to be granted a suspension of the requirement to implement LNP until the FCC clarifies outstanding issues. Such action would be consistent with the Orders from other State Commissions.

[T]he Commission finds that the economic burden to the Independents and their respective end users is not justified until further issues resolution is forthcoming from the FCC and the courts with respect to the Independents' intermodal porting obligations. (Mississippi Order, ¶15).

[I]n light of the current uncertainty relative to the economic burden of small, rural, local exchange companies, the Commission believe that it is appropriate to grant a temporary waiver in the pending applications until the LNP obligations of the small, rural, local telephone companies and the role of the state commissions is clarified. (Ohio Order, ¶10).

All of the Petitions pending before this Commission are from "small, rural, local telephone companies." Some are smaller than others, but the "potential economic burden on [South Dakota] companies and their customers" must cause this Commission great concern. Coupled with the lack of evidence of adverse impact to customers, and evidence of lack of demand for LNP, this Commission should grant a suspension to all Petitioners.

**IMPLEMENTATION TIMEFRAMES IF ANY IMPLEMENTATION  
OF LNP IS ORDERED AT ALL**

In Petitioners' initial brief and in this reply brief, it has been demonstrated that LNP is not justified. And in their initial brief, Petitioners requested that the current suspensions remain until cost and demand are better balanced from a public interest perspective. Further, suspensions should remain until a time no earlier than the courts and the FCC resolve outstanding LNP issues, including rulemakings, and that some period of time be allowed to provision hardware and software, and administrative processes. (Petitioners also seek confirmation that, under no

circumstances will they be required to transport calls outside their local calling areas.) (Petitioners initial brief, pp. 54-55).

Both the Staff brief, and the Western Wireless brief, contain different positions as to when LNP implementations should occur – both different from Petitioners’ position and different from each other. Foregoing sections of this brief support the Petitioners’ suspension/modification requests. This section concerns their positions vis-à-vis the timing of any LNP implementations, should any occur at all.

In this respect, Western Wireless urges that all companies, except for three non-settling companies, be required to implement LNP within 60 days from any Order requiring LNP implementation. It says, without any elaboration, that a grant of more than 60 days would “reward” other Petitioners “who have held on to unreasonable proposals.” (Western Wireless brief, p. 42). That Western Wireless’ proposed 60 day rule is purely arbitrary can be seen by its inconsistent agreement, with James Valley and the Cheyenne River Sioux Tribal Authority, to LNP suspension for 90 days. (Id., p. 41) The 60 day proposal of Western Wireless thus should be rejected as having no basis in either law or fact.

In any event, Petitioners note that James Valley and CRST could implement LNP in approximately 90 days because they already had started the implementation process. For example, James Valley already had completed the necessary software upgrades to the switching equipment to provide LNP for their CLEC operations. Thus, it is clear that 90 days would not be sufficient for carriers, such as Petitioners, that have not begun the implementation process.

The staff brief takes a more logical approach than Western Wireless, assuming arguendo that any LNP implementation should be required before the events described in Petitioners’ initial brief, and alluded to earlier. Specifically, staff recommends that three implementation

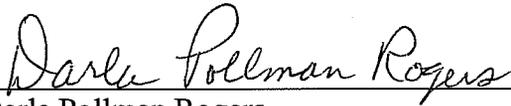

schedules obtain. For one group of companies, the implementation schedule would begin almost immediately. For another group of companies, implementation would begin May 24, 2005 -- a one year extension from the original implementation date. For the third group of companies, implementation would begin May 24, 2006. (Staff brief, pp. 15-17).

The substantive reasons for continuing the suspension of all companies, as originally requested, are discussed elsewhere in this reply brief, and are not repeated here. Assuming any implementation were to occur at all as a result of this proceeding, however, Petitioners respectfully suggest that May 24, 2006, be used as that date. This request is grounded upon the practical consequences of what is likely to happen if May 24, 2005, is used as the earliest implementation date for companies obtaining further suspensions. Assuming a written Commission decision issues in this matter during the month of September, 2004, there only will be nine months to assess whether circumstances have changed to warrant further action by the Commission. This period of time can easily be filled with assimilating the continuing fall-out from the FCC's pending rulemakings on porting intervals and wireless to wireline porting, not to mention the tasks needed to track hardware and software costs, and the further softening (or firming-up) of consumer demand for intermodal LNP. In short, the parties and the Commission are likely to become engaged in the time and resource consuming process of re-evaluation of LNP almost as soon as the ink is dry on any Commission Order. Petitioners respectfully submit that, if any implementation is ordered at all, such not occur until May 24, 2006, at the earliest, so that at least 1-1/2 years' worth of experience can be gained before this matter is re-evaluated.

### CONCLUSION

For all of the foregoing reasons, Petitioners respectfully request this Commission to suspend and modify each Petitioner's obligation to implement local number portability.

RESPECTFULLY SUBMITTED this twenty-seventh day of August, 2004.

**BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA**

<b>IN THE MATTER OF THE LOCAL</b>	)	<b>ORDER TEMPORARILY</b>
<b>NUMBER PORTABILITY</b>	)	<b>SUSPENDING LOCAL NUMBER</b>
<b>SUSPENSION DOCKETS</b>	)	<b>PORTABILITY OBLIGATIONS</b>
	)	
	)	<b>TC04-025, TC04-038, TC04-044-</b>
	)	<b>056, TC04-060-062, TC04-084</b>

Between February 12, 2004 and April 23, 2004, petitions in the above-numbered dockets were filed by the rural local exchange carrier petitioners (Petitioners) pursuant to 47 U.S.C. Section 251(f)(2) and SDCL 49-31-80 seeking suspension or modification of their requirement to implement local number portability (LNP) pursuant to Section 251(b)(2) of the Telecommunications Act of 1996. The Commission issued orders granting intervention to WWC License LLC d/b/a CellularOne and the South Dakota Telecommunications Association in all of the above dockets and to Midcontinent Communications (Midco) in dockets TC04-038, TC04-044, TC04-050-051, TC04-054-056, and TC04-060-061. Midco subsequently withdrew from dockets TC04-056 and TC04-061. The Commission issued orders granting Petitioners' requests for interim suspension of their obligation to implement LNP pending final decision pursuant to 47 U.S.C. Section 251(f)(2) of the Telecommunications Act of 1996 and SDCL 49-31-80. On June 21-July 1, 2004, a hearing was held on these matters and dockets TC04-077 and TC04-085, which have been settled, in which rural LECs seek to suspend their obligations to implement LNP. On July 15, 2004, the Commission issued orders temporarily suspending the LNP obligations of Kennebec Telephone Company and Santel Communications Cooperative, Inc. until September 7, 2004, in order to accommodate the briefing and decision schedule. On August 31, 2004, the Commission voted unanimously to grant Petitioners' requests for suspension of intermodal LNP obligations until December 31, 2005, and deferred decision with respect to intramodal number portability. Commissioner Burg dissented from that part of the decision establishing a definite date for termination of the suspension.

The Commission has jurisdiction in this matter pursuant to SDCL 49-31-80, Section 251(f)(2) of the Telecommunications Act of 1996, 47 U.S.C. § 251(f)(2) and ARSD 20:10:32:39.

Pursuant to 47 U.S.C. § 251(f)(2) and SDCL 49-31-80, the Commission is required to render its decision in this matter within 180 days after the filing of the petition. The Commission has determined that it is in the public interest to grant a temporary suspension of LNP requirements to Petitioners until September 30, 2004, to enable the Commission to consider and decide the deferred issue of intramodal number portability and to provide adequate time for the writing of the numerous final decisions in these dockets. It is therefore

**ORDERED**, that Petitioners' obligations to implement local number portability is temporarily suspended, pursuant to 47 U.S.C. § 251(f)(2) and ARSD 20:10:32:39, until September 30, 2004, by which date the Commission will issue a final decision in these dockets.

Dated at Pierre, South Dakota, this 4th day of September, 2004.

**CERTIFICATE OF SERVICE**

The undersigned hereby certifies that this document has been served today upon all parties of record in this docket, as listed on the docket service list, by facsimile or by first class mail, in properly addressed envelopes, with charges prepaid thereon.

DOUG EIDAH, Vantage Point

P R O C E E D I N G S

1  
2 CHAIRMAN SAHR: Good afternoon. This is the  
3 time and place for the closing oral arguments in  
4 the LNP dockets.

5 We're here in Room 412, in Pierre, at the  
6 State Capitol. It is approximately 1:30 p.m. on  
7 August 31st, 2004. With me here in Pierre is  
8 Commissioner Jim Burg, and joining us on the  
9 phone line is Vice Chairman Gary Hanson. And I  
10 am Chairman Bob Sahr of the South Dakota Public  
11 Utilities Commission.

12 The first thing I'll do is ask the people  
13 who are on the phone line to please state your  
14 name and who you are affiliated with.

15 MR. DICKENS: Chairman Sahr, this is Ben  
16 Dickens and Mary Sisak. We're appearing with  
17 Darla Rogers today, and we're also appearing  
18 separately for the City of Brookings.

19 CHAIRMAN SAHR: Thank you.

20 MR. LARSON: Chairman Sahr, this is Jeff  
21 Larson, appearing on behalf of Santel.

22 CHAIRMAN SAHR: Thank you. Is there anyone  
23 else other than Commissioner Hanson on the phone  
24 line?

25 MR. WILLIAMS: Chairman Sahr, this is Ron

1 Williams with Western Wireless.

2 CHAIRMAN SAHR: Okay.

3 MS. LOHNES: Chairman, this is Mary Lohnes.

4 MR. EIDAHL: Doug Eidahl, Vantage Point.

5 CHAIRMAN SAHR: And was this Mary from  
6 Midcontinent?

7 MS. LOHNES: Yes.

8 CHAIRMAN SAHR: Thank you. This is Jim  
9 Atkins from the City of Brookings, Swiftel  
10 Communications.

11 CHAIRMAN SAHR: Is there anybody else?

12 All right. Let's -- we can stay on the  
13 record, but let's try to figure out what order  
14 we're going to go in. John has informed me,  
15 Darla, you're going to go first and then Ben?

16 MR. DICKENS: Yes, or Jeff Larson.

17 CHAIRMAN SAHR: Okay. Rich? Tal?

18 MR. WIECZOREK: Sure.

19 CHAIRMAN SAHR: Dave and then staff.

20 MS. WIEST: Sure.

21 CHAIRMAN SAHR: Does that work?

22 MS. WIEST: Works for me.

23 CHAIRMAN SAHR: Is there anyone else that I  
24 missed who's going to be making oral argument?  
25 If not, the floor is yours, Darla.

1 MS. ROGERS: Thank you very much. My name  
2 is Darla Pollman Rogers, and I represent all of  
3 the petitioners in this case, with the exception  
4 of Santel Communications, which is Docket TC  
5 04-038, and Brookings Municipal Utilities, doing  
6 business as Swiftel Communications, which is  
7 Docket TC 04-047.

8 Members of the Commission: In my opening  
9 statement, given what seems like light years ago  
10 now, I refer to this entire LNP suspension  
11 modification process as "our LNP journey." Here  
12 we are a few months later, the pleadings have all  
13 been filed, the discovery has been completed,  
14 there have been a -- there has been a long series  
15 of hearings conducted, exhibits and corrected  
16 exhibits have been introduced, and the issues  
17 have been thoroughly briefed by all of the  
18 parties and by staff.

19 So we come to the end of this phase of the  
20 journey. And on behalf of all of the petitioners  
21 that I represent, I want to thank you for your  
22 time and your attention throughout this process  
23 that was at times arduous. There is little more,  
24 in my opinion, to be said, so I'm going to keep  
25 my comments to you today very brief.

1           In preparation for these closing arguments  
2 today, I went back and reviewed my notes of my  
3 opening statement, as well as the notes of  
4 staff's opening statement. And at the outset of  
5 these dockets, we, as petitioners, asked you to  
6 do several things:

7           We, first of all, pointed out your  
8 jurisdiction and your authority and your  
9 responsibility to suspend and/or modify LNP  
10 obligations under 47 USC 251(f)(2) and also  
11 pursuant to SDCL 49-31-80. And your authority to  
12 do so has basically not been disputed throughout  
13 this process.

14           We also tried to point out for you, as did  
15 the commission staff in its opening statement,  
16 some of the key issues that we would request you  
17 to focus on. The first one was the costs of LNP.  
18 And we pointed out to you that we would  
19 establish, as petitioners, that there are  
20 significant adverse economic impact -- or this is  
21 a significant adverse economic impact on  
22 subscribers.

23           We would also show that provisioning of LNP  
24 would be unduly economically burdensome to the  
25 companies.

1           The second issue we asked you to focus on  
2 was the transport and routing issues associated  
3 with LNP.

4           The third thing we pointed out to you was  
5 unresolved issues at the federal level.

6           And, finally, we asked you to look at the  
7 public interest, including a cost benefit  
8 analysis.

9           I'm not going to replot that ground. And I  
10 trust that you have focused on all of those  
11 factors throughout the hearing. I would,  
12 however, like to direct your attention to the  
13 three points today. The first one is the  
14 transport routing issues associated with LNP.  
15 And I would like to bring these up again and  
16 review them because of their significance to our  
17 petitioners.

18           The petitioners have maintained throughout  
19 this process that they have no legal obligation  
20 to transport traffic to points beyond their  
21 service territories whether the traffic is  
22 associated with ported numbers or not.

23           Under the provisions of 47 USC Section  
24 251(c)(2)(b), incumbent LEC's are required to  
25 provide interconnection only at a "technically

1 feasible point within the carrier's network."

2 Staff apparently reached the same conclusion  
3 with regard to the responsibility for transport.

4 Quoting from staff's brief, staff stated:

5 Staff's position is that the Commission should  
6 find that an RLEC is not responsible for the cost  
7 of transporting LNP traffic outside of its  
8 exchange area and that a local exchange company  
9 shouldn't be required to transport local exchange  
10 calls beyond its local exchange area.

11 Petitioners concur with and support this  
12 aspect of staff's recommendation, and we would  
13 urge the Commission to modify petitioners' LNP  
14 obligations pursuant to Section 251 of the Act to  
15 clearly state that each petitioner is not  
16 required to transport calls beyond its local  
17 exchange area.

18 Having said that, however, I would point out  
19 that that does not resolve all of the transport  
20 and routing issues. Uncertainties still exist.

21 First of all, at the FCC level, the FCC has  
22 yet to address the transport and routing issues.  
23 What we have referred to as the Sprint petition  
24 is currently pending, and there are other appeals  
25 wherein the FCC may address these issues, but

1 that has not transpired to date.

2 There is Western Wireless' position. They  
3 have said that it's petitioners' responsibility  
4 for transport, and they proposed Qwest as a  
5 transiting possibility without further evidence  
6 of whether or not that is a viable option.

7 The staff said do not require direct  
8 connections or any specific routing methods. The  
9 RLEC and the requesting carrier can negotiate the  
10 method of transport. And, of course, the  
11 petitioners' position has been that direct  
12 connections are necessary either within each  
13 exchange or within each host and stand-alone  
14 switch exchange area.

15 So what is the answer? I'm not sure I can  
16 tell you the exact answer. But what I can  
17 suggest to you is that you follow the example of  
18 the Nebraska Commission in its recent ruling and  
19 conclude as the Nebraska Commission has that  
20 indirect connections are technically infeasible  
21 presently and that resulting transport costs  
22 "would indeed be a part of the costs associated  
23 with implementation of LNP and that such costs  
24 would either be an additional significant adverse  
25 economic impact on end users, or would be an

1 undue economic burden on the local exchange  
2 carriers." And that's from the Nebraska Order at  
3 pages seven and pages ten through eleven.

4 The second point I would like to make to you  
5 today is that we're at a different point in the  
6 LNP history, so to speak, than we were at the  
7 beginning of these proceedings. You, as a  
8 Commission, now have other input to consider than  
9 you had at the start of this process.

10 FCC Chairman Powell wrote a letter to the  
11 president of NARUC, dated June 18th of 2004. And  
12 in that letter he stated -- and I would also  
13 point out that letter is part of the record in  
14 this case -- "I urge state commissions to  
15 consider the burdens on small businesses in  
16 addressing those waiver requests and to grant the  
17 requested relief if the state commissions deem it  
18 appropriate."

19 In addition, there have been other decisions  
20 of the state commissions. We provided a summary  
21 of those decisions in our Reply Brief.  
22 Approximately 250 LNP suspension requests have  
23 been filed or submitted in 38 states on behalf of  
24 approximately 786 local exchange carriers, and  
25 this is as of June 2004.

1           The vast majority of states have granted  
2 relief of one form or another, either temporary  
3 or permanent suspension to rural LEC's. So I  
4 would submit to you that you are not plowing new  
5 ground here, so to speak. And I would also urge  
6 you as a Commission to look at what the majority  
7 of what other state commissions have done and  
8 grant the relief requested by the petitioners  
9 herein.

10           The third point that I would make to you  
11 concerns the public interest. Are the  
12 suspensions and modifications requested herein  
13 consistent with public interest, convenience, and  
14 necessity? And I would submit to you that the  
15 overwhelming evidence is that they are.

16           A determination of the public interest  
17 relating to the LNP suspension petitions involves  
18 a cost versus benefit analysis. The costs were  
19 thoroughly analyzed throughout the proceedings.  
20 Petitioners have clearly demonstrated the  
21 significant adverse impact on users and the undue  
22 economic burden on carriers. The staff  
23 apparently concurs that all petitioners have met  
24 one or both of these cost tests.

25           The Nebraska Commission recently stated that

1 an analysis of the benefits of such  
2 implementation turns on whether there is a demand  
3 for LNP among the telecommunications users served  
4 by petitioners.

5 The record clearly establishes that little  
6 or no demand exists. All but three of the  
7 managers who testified on behalf of the  
8 petitioners presented direct testimony that they  
9 have had no demand for LNP. Think about that.  
10 Not one request in their areas for LNP. This  
11 included some of the larger carriers as well,  
12 including Golden West, Alliance, and Venture.

13 Petitioners disagree with staff's conclusion  
14 that the public interest test is not met for all  
15 petitioners. There is no evidence of higher  
16 demand in the grouped three exchanges. Even  
17 assuming a 1.5 percent porting rate, which was  
18 estimated by staff and was concededly a guess,  
19 that is a very small percentage of customers  
20 sustaining a very costly luxury of LNP for only a  
21 few subscribers.

22 The per line impact on customers has been  
23 demonstrated to be significant for all South  
24 Dakota consumers regardless of whether their  
25 carrier is large or small even though even among

1 the larger companies there is no evidence of  
2 higher demand. And, in fact, the evidence  
3 establishes that some of the largest companies  
4 have the lowest densities, which even staff  
5 concedes density has an effect on demand.

6 The cost does not get any better for  
7 consumers of larger companies. As we pointed out  
8 in our brief, the bottom line is this: The  
9 benefit picture does not improve for customers of  
10 a large company. I would also point out to you,  
11 as was considered by the Nebraska Commission,  
12 that there was no evidence submitted that a  
13 suspension would adversely impact consumers  
14 because there hasn't been any demand.

15 How many more surcharges are we going to add  
16 to customers' bills for services they don't want  
17 and will never use? I would submit to you that  
18 any cost is too high for customers that -- for a  
19 service that customers do not want.

20 I ended my opening statement with a picture  
21 for you and that was a public interest scale.  
22 And I said it was like the Scales of Justice, or  
23 a teeter-totter, whichever you prefer to look at.  
24 Actually, the Nebraska Commission did essentially  
25 the same thing in its final analysis of the

1 public interest.

2 So if you picture our Scales of Justice --  
3 and remember we said that the public interest  
4 element or test involves weighing the cost versus  
5 benefit analysis. And on the cost side what do  
6 we have? We have the actual costs.  
7 Implementation of LNP and those costs, even if  
8 you set aside transport for a moment -- which, of  
9 course, you can't do -- are considerable.

10 Number two, we have the economic obstacles  
11 that still exist.

12 Number three, we have the unresolved issues,  
13 including porting interval.

14 And, number four, and that spills over into  
15 number three, is the transport routing issues  
16 that are unresolved yet.

17 All of those are on the cost side. Now,  
18 what's on the benefit side? Lack of demand.  
19 That's what the evidence showed. Clearly, then,  
20 the scale, the balance of the scale, tips in  
21 favor of granting the suspensions requested.

22 Based on the evidence and the record before  
23 this Commission, we urge you to find, as the  
24 Nebraska Commission did, that the petitioners  
25 have sustained their burden of proof pursuant to

1 47 USC Section 251(f)(2)(b) that suspension and  
2 modification of the requirements of local number  
3 portability and the November 10th order of the  
4 FCC is consistent with the public interest,  
5 convenience, and necessity.

6 Finally, we would add, as requested in our  
7 Reply Brief, that if any implementation is  
8 ordered at all, it shouldn't occur until May 24th  
9 of 2006 at the earliest so that at least  
10 18 months of experience can be gained before this  
11 matter is re-evaluated.

12 Thank you again for your attention.

13 CHAIRMAN SAHR: Thank you. Mr. Dickens.

14 MR. DICKENS: Thank you, Mr. Chairman. I'll  
15 be very, very brief.

16 We would concur in the remarks by  
17 Ms. Rogers. The only thing I would add is that I  
18 know your schedule here for Midco here today on  
19 intermodal LNP. We've covered that topic in our  
20 brief. We do not believe that intermodal LNP is  
21 justified from a cost benefit analysis. We  
22 discussed that, for instance, on page 12 of our  
23 Reply Brief. And we would rest on that brief,  
24 and that concludes my remarks.

25 CHAIRMAN SAHR: Thank you very much.

1 Mr. Larson.

2 MR. LARSON: Thank you. Also I am not going  
3 to add a great deal to what Darla has presented  
4 to the Commission.

5 My client's situation is obviously similar  
6 to everyone else's. I would like to point out  
7 just two very brief things: In the discussion  
8 about costs and the argument that intervenors  
9 have used showing substantially lesser costs in  
10 certain situations, I would like to point out  
11 that it has been the history of these petitioners  
12 and our desire at this time to always provide  
13 quality service.

14 And that I don't think we want to provide a  
15 situation or buy into a situation where we would  
16 be giving any kind of service unachieved, which  
17 suggests that the costs presented in evidence by  
18 the petitioners are the costs that need to be  
19 considered and why they therefore meet the  
20 statutory requirement.

21 And, lastly, that none of us -- I don't mean  
22 to be demeaning. I suggest this to myself and I  
23 advise clients, the court, or commission, we  
24 don't check our common sense at the door. There  
25 is no -- it's almost uncontroverted there is no

1 demand for this service. And I would suggest to  
2 you, as Darla alluded, that this is not going to  
3 change by next spring; and that therefore if  
4 anything would be granted, we would certainly ask  
5 that it be at least spring of 2006. And that's  
6 all I'd have. Thank you very much.

7 CHAIRMAN SAHR: Thank you very much.

8 Mr. Coit.

9 MR. COIT: Thank you. I would also like to  
10 thank you, the Commission, for all of the time  
11 spent during the hearings process. And I would  
12 also like to thank you for the opportunity for  
13 these arguments today.

14 I also concur in Ms. Rogers' comments. SDTA  
15 presented testimony through one witness in this  
16 case, Mr. Steven Watkins. And Mr. Watkins  
17 commented on the various standards and the  
18 evidence as weighed up against those standards  
19 for judging these LNP suspensions, but his  
20 primary emphasis was on the public interest  
21 analysis. And in argument today, I would just  
22 like to focus in on, I think, a couple of the  
23 more important considerations within that  
24 analysis.

25 In our initial brief before the Commission,

1 we had set forth, I think it's pages 41 through  
2 53, a list of the various reasons why we don't  
3 believe it is in the public -- or we do believe  
4 it is in the public interest to grant all of  
5 their requested suspensions. Staff is suggesting  
6 -- or is recommending that certain companies not  
7 receive a suspension.

8 We don't agree that the public interest  
9 factors or the public interest analysis is any  
10 different really in terms of the result, what the  
11 result should be. We believe that all of the  
12 companies, if you look at it, look at the  
13 standards that are there, and looking at the  
14 public interest in particular, deserve a  
15 suspension.

16 First -- and Ms. Rogers discussed this at  
17 length here, that the lack of demand --  
18 Mr. Watkins, in his testimony, discussed the lack  
19 of demand and explained that at least in his  
20 opinion, you know, the reasons that you don't  
21 have any real demand for this particular  
22 service -- and speaking specifically to  
23 intermodal portability -- is the fact that the  
24 services today, anyway, are not really viewed as  
25 substitutes, but are viewed as complimentary

1 services.

2 So you just don't have much consumer  
3 interest in taking the same telephone number and  
4 moving it to the completely different service.  
5 That's not to say that doesn't happen. But  
6 there's just not that many customers that are  
7 interested in doing that. And that's borne out  
8 with respect to, you know, the nationwide numbers  
9 that were presented in some of the testimony.

10 And then, in addition to that, the demand, I  
11 think you can assume, is pretty minimal, very  
12 minimal because of the poor wireless coverage in  
13 South Dakota.

14 There are probably other reasons why there  
15 isn't much demand, but it's very clear from the  
16 record in this case that today there really  
17 isn't. There's little, if any, demand. And  
18 that, to me, is the most significant thing that  
19 sticks out in the public interest analysis.

20 The other thing that is an issue or a factor  
21 that I think equally has to be considered for all  
22 of the companies are the unresolved issues at the  
23 federal level. Right now we have at the federal  
24 level a number -- I know of at least two  
25 proceedings that are pending that will impact

1           these LNP obligations and the cost of those  
2           obligations.

3           You've got the FCC further notice of  
4           proposed rule making. We don't exactly know what  
5           the timeline is on that, but we know that it's  
6           there. We know that there's a rush to try to  
7           resolve some of these issues. We've got the  
8           Sprint petition proceeding that is to address the  
9           transport obligation issues.

10          We also have a pending appeal in the U.S.  
11          Court of Appeals that was brought by USTA, NTCA,  
12          and some other national telephone organizations.  
13          And I, as of today, don't know exactly what the  
14          timeline is for -- none of us know exactly what  
15          the timeline is for the decision in that case,  
16          but that appeal is pending.

17          And to the extent that certain companies are  
18          not granted a suspension, effectively they're  
19          going to be stripped of those appellate rights.  
20          You're not going to give that -- you're not going  
21          to give them a chance to wait for that decision  
22          and see exactly, you know, what their obligations  
23          are. And, clearly, that case, as well as the FCC  
24          cases that are pending, will impact LNP costs.

25          Staff is recommending, and we agree, that

1 rural LEC's are not responsible to carry traffic  
2 outside of their service areas. We don't know  
3 today, though, what the FCC's decision is going  
4 to be on the transport. And, very clearly, those  
5 decisions could impact LNP costs.

6 If you look at the other state decisions,  
7 Western Wireless, in its brief, had referenced a  
8 decision in New York and a decision in Michigan.  
9 There are a lot of decisions out there. As  
10 Ms. Rogers pointed out, the majority of those  
11 decisions are in favor of granting suspensions  
12 or modifications for some period of time.

13 I think I quoted -- we quoted in the --  
14 mentioned in the Reply Brief that as of the end  
15 of June there were 18 states out of the 35 states  
16 that had suspensions pending or before them that  
17 18 states already have granted some relief to  
18 rural LEC's.

19 I would, in particular, like to refer the  
20 Commission to the decision of the Ohio  
21 Commission, the Nebraska Commission, and the  
22 Mississippi Commission, all of whom gave weight  
23 to the fact that there were issues unresolved at  
24 the federal level. Specifically noted, that  
25 those decisions will impact LNP costs, and for

1           that specific reason -- or along with other  
2           reasons decided that the suspensions should be  
3           granted that were requested, or at least some  
4           level of suspension should be granted.

5           I think the other thing to remember is that  
6           there is an LNP surcharge that has to be  
7           established. And to the extent that the costs  
8           aren't known at the time that that LNP surcharge  
9           has to be established, companies are in the  
10          position of having to change that down the road.  
11          And if they have to change that, they actually  
12          have to get a waiver of the FCC rules to change  
13          that surcharge.

14          And from the research that we've done, it  
15          doesn't appear in looking at past FCC decisions  
16          that that sort of a waiver is going to be very  
17          kindly at all. That being the case viewed, you  
18          know, it really puts the companies in the  
19          position of having to determine what their LNP  
20          costs are and put it in a charge before the  
21          decisions are made at the federal level that will  
22          definitely impact those costs.

23          The last thing that I would like to spend a  
24          little bit of time commenting on is the transport  
25          option issue.

1           We spent a lot of time at the hearing  
2           discussing various transport options.

3           In Western Wireless, throughout the hearing,  
4           tried to portray that transport issue as being a  
5           pretty simple one. And they suggested on  
6           numerous occasions during the hearing that their  
7           proposal would be more efficient and less  
8           expensive to implement than the direct connection  
9           proposals forwarded by petitioners.

10           These Western Wireless claims, in our view,  
11           only look at the transport issue from Western  
12           Wireless' perspective, and they really give  
13           absolutely no consideration to the actual  
14           financial impact on the rural LEC's.

15           As reflected in the testimony of Mr. Houdek,  
16           Mr. DeWitt, and others, Mr. Bullock, if rural  
17           carriers with their limited service areas are  
18           ultimately forced to bear the burden of  
19           transporting landline calls to ported wireless  
20           numbers, all the way to a serving LATA tandem,  
21           and are forced to exchange these calls with  
22           Western Wireless and all other wireless carriers  
23           as local calls, the impacts will be "huge" for  
24           all the petitioners.

25           We commented on this in our Reply Brief, and

1 I'm -- just to give you an idea, I'm guessing, of  
2 the impacts. If landline carriers must consider  
3 landline calls for a ported number served by a  
4 wireless carrier as local and are also required  
5 to take on the responsibility to transport that  
6 traffic to a location outside of their existing  
7 local calling areas or service areas, there are a  
8 number of financial impacts.

9 Not only will there be additional direct  
10 costs associated with LNP implementation, there  
11 will be impacts on other LEC revenues. If the  
12 traffic to ported numbers is considered local,  
13 the LEC minutes flowing through the separations  
14 process that is utilized to establish federal and  
15 state access rates will be affected.

16 There will be a resulting increase in local  
17 traffic, and this increase will translate into a  
18 greater shift of cost recovery to the intrastate  
19 jurisdiction. This, in turn, will require higher  
20 local exchange service rates and/or intrastate  
21 access rates.

22 In addition, if the traffic is considered  
23 local and not subject to access charges,  
24 customers will be encouraged to bypass to an even  
25 greater extent the current landline total

1 networks. Increased bypass will lead to fewer  
2 access minutes and higher intraaccess state  
3 charges. The business of landline toll carriers  
4 competing will also be impacted. If landline to  
5 landline calls moving from one landline local  
6 calling area to another landline calling area are  
7 considered toll, but landline to wireless calls  
8 are not, landline long distance companies are  
9 tremendously disadvantaged, and this would  
10 undoubtedly be a negative impact on landline  
11 carriers' toll revenues.

12 So when you look at the transport issue,  
13 there's much more to consider than just the cost  
14 of those facilities that are established between  
15 the ILEC's and the Qwest. There's much more to  
16 it than that. There are a lot of impacts  
17 associated with the transport option.

18 Lastly, I would just like to comment on the  
19 last item that we had referenced in talking about  
20 the public interest. And that is the fact that  
21 we really are dealing today with a situation  
22 where it is effectively one-way porting.

23 Looking at that from the ILEC perspective,  
24 we have nothing to gain from this from a  
25 competitive perspective. It certainly doesn't

1 create a level playing field given the different  
2 calling scopes that exist between wireless and  
3 wireline companies. And I think that is  
4 something that should be kept in mind in this  
5 process.

6 If the FCC would have done it right, it  
7 would have gone ahead and they would have  
8 addressed the local calling scope differences,  
9 the rate center issues, before they ever ordered  
10 intramodal LNP. We can all speculate as to why  
11 they did it. I'm not sure why they did it. It  
12 has created a mess throughout the entire  
13 industry, which is illustrated by the fact that  
14 we have 250 some suspensions that are pending.

15 If the FCC would have done it in an  
16 appropriate way and addressed the real regulatory  
17 problems that are presented before they ordered  
18 it, I don't think we would have all of this  
19 litigation. And I think just the number of  
20 suspensions that are out there give you a pretty  
21 good indication that there are a lot of problems  
22 that need to be resolved.

23 We believe that the Commission should give  
24 the FCC a chance to resolve those issues, to give  
25 the courts a chance to revolve those issues

1 before requiring ILEC's to implement LNP. Thank  
2 you.

3 CHAIRMAN SAHR: Thank you very much.  
4 Mr. Wieczorek.

5 MR. WIECZOREK: Thank you, Chairman Sahr.  
6 Thank you, Commissioners, for your patience  
7 through all this, the two-week hearing and now  
8 granting us this chance to come in and wrap this  
9 up with some oral arguments.

10 I'm not going to repeat everything that was  
11 in the briefs. I think the briefs are -- our  
12 brief outlined our position fairly well. But  
13 there are some highlights that I'd like to  
14 address and then like to address some things that  
15 were contained in the Reply Brief.

16 First of which is, you know, it's obvious  
17 that the petitioners don't want to provide LNP,  
18 period. They see it as allowing other companies  
19 to come in and get some of their customers.

20 But the statutory test is fairly clear. And  
21 there are words in that test that set out that  
22 have to have meaning when you look at this and  
23 the petitioners have to pay attention to. First  
24 of all of which is that to meet the first  
25 requirement they have to show that your action is

1           necessary, that's necessary to avoid a  
2           technically infeasible situation.

3           Now, at the time of the hearing all three  
4           petitioners' cost experts said, well, this is  
5           technically feasible. It's really a cost issue.  
6           We now hear it is technically infeasible. Now  
7           the argument seems to be it's technically  
8           infeasible because it becomes technically  
9           infeasible unless you require point of  
10          interconnect.

11          But that totally ignores what's happened in  
12          Minnesota that was talked about at the time of  
13          the hearing. The MIC petition did not -- follows  
14          the procedure for transport that was set up and  
15          recommended by Western Wireless in this  
16          situation. To now take the position that it  
17          works in Minnesota but technically it's  
18          infeasible here makes absolutely no sense. And,  
19          frankly, they didn't provide any testimony that  
20          makes that technically infeasible.

21          The cost issues: Let's take transport right  
22          out of the box. That's a huge cost issue. Now,  
23          one of the issues in our brief and one of the  
24          issues I have with the way this has been  
25          presented by petitioners is they've had -- their

1 obligation under the statute is to show you  
2 Commissioners why your action is necessary to  
3 avoid an unduly economic requirement that's  
4 unduly economically burdensome.

5 However, rather than out of the box when  
6 this obligation came on and when Western Wireless  
7 contacted every one of these petitioners and said  
8 we would like to start working on porting  
9 numbers. Do you have any questions? Contact us.  
10 They sent out their cost experts. Their cost  
11 experts did one analysis, and they restricted it  
12 to interconnection agreement routing  
13 arrangements.

14 There's no contact with Western Wireless.  
15 And this -- in their brief -- in their Reply  
16 Brief they take the position, well, you could  
17 change those interconnection agreements, but  
18 Western Wireless has never asked us to do that.

19 I say that that is a misrepresentation,  
20 clearly. Ron Williams sat here and said, look,  
21 we tried to put that language in those  
22 interconnection agreements to begin with. It was  
23 taken out, not by us, but by them. And he was  
24 clearly -- there was clearly testimony that every  
25 one of these petitioners received a notice from

1 Western Wireless seeking some kind of dialogue.

2 And now to come to this Commission and say  
3 they could have provided, but they haven't  
4 bothered to ask. And to put the burden back on  
5 us is inappropriate, and it's, like I said, a  
6 misrepresentation of the facts that has been in  
7 front of the Commission and the truth.

8 The obligation sits on the petitioners.  
9 Western Wireless has come to this table to try to  
10 make things work. Throughout these -- throughout  
11 these proceedings Western Wireless has stepped up  
12 to try to make this work. The proceeding --

13 Western Wireless told this Commission, to  
14 try to eliminate some of the uncertainty, that  
15 Western Wireless would pick up the transport  
16 issues and yet until the FCC decides that final.  
17 And yet transport continues to come up saying  
18 it's in these arguments saying it can't be done.

19 Yet Mr. Bullock, a cost expert here, in  
20 response to Vice Chair Hanson's question says,  
21 you know, if Western Wireless is going to pay the  
22 way -- I think his phrase was, if you're going to  
23 pay the freight, you get to pick the railroad,  
24 meaning that if Western Wireless is going to pick  
25 the freight, they can make -- they can have this

1 delivered over the Qwest lines, they can go these  
2 routes.

3 So to come in and try to jack up the  
4 transport costs to legitimize and make necessary  
5 this Commission's actions is inappropriate, and I  
6 believe the facts bear out that your actions are  
7 unnecessarily unduly economically burdensome.

8 Really the only thing that they can prove  
9 under the first element, or arguably prove, is  
10 there are significant adverse economic impacts.  
11 And as our brief pointed out, they haven't proven  
12 it. There has been no testimony, with the  
13 exception of Kennebec, as to what the customers  
14 are willing to pay for LNP.

15 It is interesting to note that in our brief  
16 we discuss the Kennebec survey wherein one out of  
17 five people in Kennebec saved up 50 cents a month  
18 to have this opportunity, and 12 percent of the  
19 customers in Kennebec that responded to a survey,  
20 a mailed survey to them that they turned around  
21 and responded to would be willing to pay a dollar  
22 to have this option.

23 No other petitioners provided this  
24 information. And they didn't respond to it in  
25 the Reply Brief. The reason they -- that the

1 petitioners don't respond to it in their Reply  
2 Brief is because that supports the demand for LNP  
3 and the desire of rural customers to have LNP.

4 I submit if one in five people in Kennebec  
5 are willing to pay 50 cents for at least one  
6 company here, or two companies, one under 50  
7 cents and one that hovers around 50 cents, one  
8 out of five is a significant portion of the  
9 people. To say that that now creates a  
10 significant adverse impact, economic impact on  
11 the individuals, the evidence does not exist. It  
12 isn't there. That's a very high demand for LNP.

13 And those areas that are even closer than  
14 Kennebec to the more urban areas of South Dakota  
15 outside of Sioux Falls, those areas with a higher  
16 demographic makeup are obviously and more mobile  
17 bedroom communities into Sioux Falls, I think the  
18 common sense -- as counsel for Santel said if you  
19 don't leave that at the door -- common sense  
20 tells you those people likely have a higher  
21 demand for LNP as they go about their business  
22 and live in one community, but work in another.

23 So as our brief clearly sets forth, we do  
24 not believe any of the petitioners have met their  
25 burden under the first part of the test. You

1           only go to the public interest if they've met one  
2           of those three factors under the first part of  
3           the test.

4           Public interest, they point back to  
5           Mr. Watkins. Mr. Watkins makes some very general  
6           statements. He doesn't like LNP. He doesn't  
7           like the way the FCC set it up. However, he  
8           doesn't look at any of the petitioners and say  
9           this petitioner has the following factors and  
10          that's why I don't believe it fits with their  
11          customer base.

12          He makes references -- and Mr. Coit repeated  
13          it -- that there's -- in some areas there's poor  
14          cellular service. And I believe the corporate  
15          representative from Valley talked about that.  
16          And that's one of the reasons staff's brief set  
17          forth that they should be one of the not  
18          immediate people to provide LNP.

19          However, most of the corporate  
20          representatives complain about cellular service,  
21          yet Mr. Watkins would have you believe if  
22          cellular is ubiquitous throughout the service  
23          area of one of these LEC's, the demand for LNP is  
24          equivalent to that of value. And his general  
25          testimony cannot stand for showing public

1 interest to grant LNP.

2 A couple issues on a staff's brief I'd like  
3 to address and that is some -- the first is out  
4 of their categories, why we disagree that LNP is  
5 necessary -- or suspension of LNP is necessary  
6 under the test provided under the statute.

7 If one were to accept the staff -- the way  
8 the staff has broken out the petitioners by  
9 category, two of the petitioners, I believe,  
10 would be -- should be moved out what they term  
11 the category two, which is an extension to May of  
12 next year and down into providing LNP  
13 immediately. Specifically, Sioux Valley, which  
14 has a low cost per line, in alliance with some of  
15 the other petitioners that staff feels should  
16 provide LNP immediately.

17 And staff's projections, which I can contend  
18 are low, of 84 ports a year, or seven ports a  
19 month. Sioux Valley's is located not far out of  
20 the Sioux Falls area and is probably an area that  
21 will see more active porting.

22 The other company that they have placed in  
23 the tier two that I believe should be moved down  
24 and providing immediately LNP based on their  
25 analysis is Santel. Santel's costs, again, are

1 within that range that the staff felt was  
2 acceptable and also their ports, though staff's  
3 are lower at 72.

4 One of the other factors out there that was  
5 testified to was affiliated or a subsidiary  
6 company of Santel is moving into as a competitive  
7 LEC into the Mitchell area so that would also  
8 provide them with additional expertise since in  
9 that competitive LEC area they're going to have  
10 to be LNP compliant.

11 One of the issues of the Reply Brief I have  
12 an issue with the way they try to interpret the  
13 staff's brief and there's -- it was alluded to in  
14 arguments by petitioners' counsel, and that is in  
15 their brief they have taken the position that  
16 staff's brief means for anybody who gets a  
17 suspension to May of 2005 or 2006, that they  
18 don't have to start implementing until that time  
19 period comes.

20 I don't read staff's brief that way. I read  
21 staff's brief -- and I'll let staff speak to it.  
22 But if staff's brief's intent was that would they  
23 have an extension to 2000 -- May of 2005 and only  
24 then do they have to start the exercising --  
25 implementing, I would say that that would be an

1 inappropriate additional extension.

2 The petitioners -- even though petitioners  
3 who receive an extension, should the Commission  
4 grant it, can work on the preliminary work,  
5 provide LNP, and it should be a date certain for  
6 it to be LNP compliant. It makes no sense to set  
7 a date and then say, okay, now you have to start  
8 working on implementing and leave the date that  
9 they actually have to become compliant wide open  
10 to them saying, we're just starting on it, we're  
11 going to start our training program now, we're  
12 going to go through all these things, we're going  
13 to start talking to the cell companies. So I  
14 think a date certain to be LNP compliant is  
15 necessary.

16 The Reply Brief of petitioners talks about  
17 modifying the staff's requirement in dealing with  
18 transport to require point of interconnection, or  
19 POI's, and successfully negotiate transport. Yet  
20 their brief says we're not asking for an  
21 interconnection agreement, but we're asking for  
22 them to successfully negotiate transport.

23 I believe this is a red herring where they  
24 can just delay implementation of LNP. I believe  
25 for those companies that this Commission order --

1 and, again, Western Wireless would say except for  
2 the five that we've stipulated to should get to  
3 March 31st of next year -- should be all of them,  
4 that there shouldn't be a requirement to reach  
5 some kind of contractual agreement for transport.  
6 We, as Western Wireless, will be motivated to  
7 provide transportation in the most cost-effective  
8 manner possible.

9 We should not be restricted to try to come  
10 up with something short of an interconnection  
11 agreement, but come up with some contractual  
12 agreement to arrange for transport.

13 The other -- one of the other troubling  
14 aspects I have is how the petitioners have  
15 approached this. They group all petitioners  
16 together and they talk about needing points of  
17 interconnect and how this can't be done. Yet  
18 they make no distinctions for those companies  
19 that Western Wireless already has point of  
20 interconnect with.

21 Western Wireless already has point of  
22 interconnection with Golden West, Vivian,  
23 Venture, West River and Interstate. Yet  
24 petitioners would have you accept that that makes  
25 no difference at this point. They just need to

1 be lumped in and receive the same extension.

2 It's -- their argument is duplicitous in  
3 that they try to group all these petitioners  
4 together saying that points of interconnect are  
5 needed and then ignore the existing points of  
6 interconnection.

7 Finally, I would ask the Commission look  
8 behind the actions -- or look at the actions of  
9 the petitioners. There is a generally-accepted  
10 legal analysis which is sometimes called the  
11 clean hands doctrine. And that generally means  
12 that if you're going to ask for exceptions, if  
13 you're going to ask to fit within a rule, if  
14 you're going to ask for extensions, that you come  
15 to the tribunal or commission that you're  
16 requesting that to with clean hands to say we  
17 have attempted to resolve this in earnest. We  
18 cannot resolve this. There are things that we  
19 cannot resolve. Please give us this extension.  
20 Why we are working on the solution.

21 Commissioners, I submit that with the  
22 exception of James Valley and Cheyenne River  
23 Sioux Tribe, none of the petitioners come to you  
24 with clean hands. And they shouldn't be rewarded  
25 for attempting to make you act by increasing

1           their costs and by not attempting to resolve  
2           these issues either before they came to this  
3           Commission or during the pendency of this action.

4           There was -- there is an attack on Western  
5           Wireless' position when we say these people  
6           should -- these petitioners should implement LNP  
7           within 60 days. James Valley came to you and  
8           said they could do it within ninety. I will  
9           submit that James Valley had already had their  
10          software for LNP activated.

11          However, the testimony is, though, all the  
12          Nortel switches that come with that software only  
13          needs to be activated. James Valley hit the  
14          ground running and said we can do this in  
15          90 days. To award more than 90 days -- and even  
16          to award 90 days awards the remaining petitioners  
17          for coming to this Commission without those clean  
18          hands. Thank you.

19          CHAIRMAN SAHR: Thank you. Mr. Gerdes.

20          MR. GERDES: Mr. Chairman, members of the  
21          Commission: I'll be brief. Midcontinent has  
22          been something like a mouse in the corner in this  
23          proceeding. I found it interesting that my good  
24          friend, Mr. Dickens, pointed out their arguments  
25          in their brief -- as nearly as I can tell, he

1 pointed out page 12, and as nearly as I can tell,  
2 that's the only page in a 37-page brief that  
3 Midcontinent was mentioned, which I would submit  
4 to you is about consistent or equal to the amount  
5 of attention that the petitioners have paid to  
6 the subject of intramodal LNP.

7 I calculate one page out of a 37-page brief  
8 to be about 2.6 percent. And I would suggest  
9 that that was about the amount of time that the  
10 petitioners paid to intramodal LNP in this  
11 proceeding, which I think proves our point.

12 And our point is that the law as passed in  
13 1996 requires local number portability. The '96  
14 Act also requires that there be competition in  
15 the local loop. There really is very little  
16 question that local number portability is  
17 necessary to inject competition into the local  
18 loop.

19 Given the minimal additional cost that is  
20 associated with intramodal LNP, it is our  
21 position that the petitioners have not sustained  
22 their burden of proof.

23 I'd like to also just give you a short  
24 analysis of the way I see the law on this. The  
25 petitioners have the burden of proof. We all

1 agree to that. And I think most of the briefs  
2 have covered the actual legal principle itself.

3 And so I would suggest to you that what  
4 251(f)(2) says as to suspensions or  
5 modifications, that in order to override what is  
6 the statutory public interest, as embraced by the  
7 '96 Act, the petitioners have the burden of, in  
8 effect, turning the public interest around  
9 180 degrees.

10 In other words, turning public interest onto  
11 its ear. Because, remember, the overarching  
12 reason for passing the '96 Act was to inject  
13 competition into the local loop. That was the  
14 reason. Competition is the alternative for  
15 regulation. That was why the '96 Act was passed.

16 So if you look at the structure of  
17 251(f)(2), it says that in order for the  
18 petitioners to receive suspensions or  
19 modifications, they must show that there is no --  
20 in order to receive the suspensions and  
21 modifications, they must show that it is  
22 necessary to avoid a significant adverse economic  
23 impact on customers, they must show that it is  
24 necessary to avoid an unduly economically  
25 burdensome requirement, or to avoid imposing a

1           technically infeasible requirement.

2           And coupled with this, there must also be  
3           finding that these suspensions and modifications  
4           are consistent with the public interest.

5           So what has to be done is they have to go  
6           through -- they have to turn the ladder  
7           upside-down in order to get to the point they  
8           want to get to, and that's a big burden of proof.

9           Now, I'm not going to comment on the  
10          wireline to wireless LNP. But I would submit to  
11          you that if you look at the evidence in this  
12          proceeding, there's absolutely no question that  
13          they have not proven that the mandate of the '96  
14          Act should be set aside.

15          Let's not forget the FCC has had ample  
16          opportunity to modify the requirements of the  
17          Act, and they simply haven't done it. They have  
18          done it with respect to wireless LNP, but not  
19          local number portability, intramodal local number  
20          portability.

21          So we would submit that clearly there's no  
22          reason to delay and that local number portability  
23          should be ordered in the intramodal situation.

24          One last comment: The two things that the  
25          petitioners argue about the most, the lack of a

1 point of interconnection in the rate center and  
2 the cost of transport, are simply not present in  
3 wireline to wireline LNP.

4 Thank you very much for indulging the  
5 parties to this case in a very interesting  
6 two-week hearing and in the briefing process. As  
7 always, these proceedings are educational for all  
8 of us. Thank you.

9 CHAIRMAN SAHR: Thank you. Staff.

10 MS. WIEST: In staff's brief what we tried  
11 to do was evaluate each company and try to come  
12 up with what in staff's opinion was a reasonable  
13 recommendation.

14 And I think with respect to that first  
15 group, Kennebec, Faith, Tri-County,  
16 Stockholm-Strandburg and Western, I really don't  
17 think there's too much of an argument as to  
18 whether those companies should be granted some  
19 sort of a suspension. There was a question of  
20 how long it is.

21 Staff has, of course, proposed a two-year  
22 suspension due to those significant per line  
23 costs in those cases. We believe even with an  
24 FCC decision deciding some of the issues, that  
25 the significant adverse impact standards could

1 still be met.

2 Going to our second group of companies from  
3 for which staff recommends a one-year suspension,  
4 these do have some floor costs. In the first  
5 group we believe, in all likelihood, they will  
6 have a higher number of ports; and we believe  
7 they would benefit from a one-year suspension.  
8 Again, hopefully the FCC will inject some  
9 certainty into the proceedings.

10 Also some of the companies have some  
11 individual issues. For example, Armour,  
12 Bridgewater, Union has a mitel switch that will  
13 most likely need to be replaced at some point in  
14 the next couple years or the next -- or at least  
15 they have to make a decision. And Valley  
16 testified it only had 25 percent wireless  
17 coverage.

18 With respect to the third set of companies,  
19 I guess staff believes that at some point when  
20 you do have the cost versus demand balancing  
21 test, there is a point at which it can be in the  
22 public interest to implement LNP for these  
23 companies.

24 For example, when you have Golden, Qwest,  
25 Vivian, Kadoka, you have costs down to around 30

1 cents. And for ITC it costs around 55 cents  
2 higher access line numbers. Plus, in that case  
3 you have Midcontinent's entry into parts of ITC  
4 service area which certainly increased the  
5 porting demand.

6 Staff would be -- will admit that the line  
7 between the second and the third group is not  
8 nearly as clear-cut as the line between the first  
9 and the second group. And I think that ends up  
10 being a judgment call for the Commissioners to  
11 make if they choose to follow this type of  
12 situation.

13 Going on to the one issue about technically  
14 infeasible, I do not -- I still do not think that  
15 any of the companies can qualify under the  
16 technically infeasible standard. Based on the  
17 evidence, including evidence from the  
18 petitioners, I think it clearly showed that it is  
19 technically feasible to implement LNP.

20 And that brings me to my next point is how  
21 should it be implemented. As we state in our  
22 brief, we don't think the RLEC's are responsible  
23 for the costs of transporting LNP traffic outside  
24 of their exchange.

25 But, on the other hand, we don't think that

1 the Commission should go and mandate how LNP  
2 traffic should be transported in each case. I  
3 think you just to have look at James Valley and  
4 Cheyenne River to see that if you look at a  
5 company-by-company basis. And it depends. Is  
6 there direct connection in there? If there is  
7 not, I think the companies are certainly in the  
8 best position to figure out which is the most  
9 efficient and which is the most reliable method  
10 for transport.

11 Also, we did note in our brief if the  
12 Commission does grant suspensions for some of or  
13 all of the companies, we think the sub companies  
14 should be required to keep track of requests for  
15 LNP. We would encourage wireless companies to  
16 keep track.

17 And I think for some of the companies that  
18 have to do generic upgrades or switch  
19 replacements, the Commission would need more  
20 information as to those timelines that they would  
21 request additional suspensions.

22 But in the end, it's staff's opinion the  
23 demand for LNP will increase over time. And  
24 that's certainly a factor to be considered in the  
25 public interest balancing test.

1           And just going to the question of whether  
2           there was shown little demand for LNP, I think  
3           based on the evidence, it's more accurate to say  
4           that the demand is uncertain. I mean even  
5           Mr. Bullock had put in numbers that range from  
6           like six-tenths to 3 percent demand.

7           And Mr. Wieczorek also mentioned the  
8           Kennebec survey. But I do think that there will  
9           be some demand for LNP, but at this point I would  
10          agree that the demand is uncertain.

11          And with respect to Mr. Wieczorek's comment  
12          about what our suspensions or timelines mean,  
13          when we talk about a one-year suspension, we do  
14          mean that by one year that the Commission -- that  
15          they would have to have it implemented by then  
16          unless they would ask for further suspension  
17          before that time. Thank you.

18          CHAIRMAN SAHR: Thank you. At this point in  
19          time I will move that the Commission go into  
20          executive session to discuss the case.

21          COMMISSIONER BURG: Can we ask questions?  
22          Is that appropriate, I guess, is what I'm asking?

23          CHAIRMAN SAHR: Let's go off the record for  
24          a second.

25          (A DISCUSSION WAS HELD OFF THE RECORD.)

1                   COMMISSIONER BURG: I guess I have basically  
2 just one anyway.

3                   CHAIRMAN SAHR: First of all, let's go back  
4 on the record. At this point in time we'll see  
5 if there are questions from the Commissioners or  
6 the advisors for the Commissioners.

7                   Commissioner Burg.

8                   COMMISSIONER BURG: The question I have --  
9 and I'll ask it first of Ms. Rogers and then of  
10 Mr. Wieczorek. The fact that transport -- if  
11 transport were transferred to the wireless  
12 requesting company to provide, does that make the  
13 cost of transport in any way disappear?

14                  MS. ROGERS: No, sir.

15                  COMMISSIONER BURG: Would it just shift it  
16 to a different group of consumers? Would that be  
17 accurate?

18                  MS. ROGERS: I believe that what we've tried  
19 to portray is that while you can consider the  
20 actual costs of the implementation of LNP with  
21 switch upgrades and all of those types of  
22 elements, and you can consider transport, you  
23 can't ignore transport. The transport costs are  
24 not going to go away.

25                  So one way or another they're going to have

1 to be borne by someone. So I think your  
2 statement is accurate.

3 COMMISSIONER BURG: What would be your  
4 analysis of the impact on LNP requests if that  
5 transport costs was shifted to the requesting  
6 party?

7 MS. ROGERS: At this point, and in  
8 accordance with the evidence as it came in in  
9 this hearing, I'm not sure that it would have --  
10 or make a great difference. I mean we are just  
11 not seeing a demand or request for LNP.

12 I mean we're saying that in our -- in the  
13 exchanges that are represented here, they have  
14 not had customers that have come in and said "we  
15 want to port our numbers to a wireless carrier."  
16 And they have not been privy to these proceedings  
17 to know the costs involved. There is just not a  
18 demand for it.

19 COMMISSIONER BURG: I'll give you a chance  
20 to answer the same questions, Mr. Wieczorek.  
21 Does the cost merely go to a different party, the  
22 transport costs, or do some of them actually just  
23 go away in any way?

24 MR. WIECZOREK: What Western Wireless has  
25 proposed is pending the final decision of the

1 FCC, we would pay the transport costs. So to the  
2 extent, sure, there's still costs there, but  
3 they're not borne by the petitioners or the  
4 petitioners' customers.

5 COMMISSIONER BURG: How would you recover  
6 that transport cost?

7 MR. WIECZOREK: It would be part of the  
8 regular bill.

9 COMMISSIONER BURG: Would your marketing of  
10 LNP change if you had that additional cost?

11 MR. WIECZOREK: I'm not in the marketing  
12 Department of Western Wireless. I would -- so to  
13 the extent I believe it would not because they  
14 would just pick that cost up and it would be part  
15 of their internal cost structure.

16 To the extent that Western Wireless has  
17 available points of interconnect already, they  
18 would use those. Otherwise, they would use the  
19 existing infrastructure either through SDTA or  
20 Qwest, as discussed by Mr. Williams. And those  
21 costs would just be part of the costs that they  
22 would pay if it's a cellular customer calling in  
23 that area.

24 COMMISSIONER BURG: Because my concern is  
25 that we have right now, of course, there's no

1 reason not to promote and advertise and try to  
2 get LNP customers because there's actually no  
3 cost to the requesting wireless party.

4 And my concern is that where we already  
5 have, from the evidence in the record at least,  
6 very low take on local number portability, if  
7 there were additional costs to be added to the  
8 person asking to port their number through their  
9 wireless company, that that desirability, both on  
10 the part of the wireless company and the consumer  
11 to pay the extra costs for the purpose of LNP  
12 might even reduce that more. That's kind of  
13 where I'm coming from.

14 MR. WIECZOREK: I do not envision that  
15 Western -- it would cause Western Wireless to  
16 stop any marketing. They would plan on doing an  
17 LNP if the Commission would make the petitioners  
18 become LNP. And I do not envision -- and, of  
19 course, I'm the attorney, not the engineer, but I  
20 do not envision that it would increase the  
21 baseline costs of what Western Wireless would  
22 charge its customer base.

23 CHAIRMAN SAHR: Off the record.

24 (A DISCUSSION WAS HELD OFF THE RECORD.).

25 CHAIRMAN SAHR: I do have a couple questions

1 since we're taking the time for that.

2 One of the things that came up is the --  
3 from staff is the request that if waivers are  
4 granted, then the LNP request be tracked.  
5 Ms. Rogers, do you know if that's something  
6 that's acceptable to your clients?

7 MS. ROGERS: To my knowledge, yes, that  
8 would be acceptable to my clients.

9 CHAIRMAN SAHR: And if a waiver were to be  
10 granted, one of the issues would be is this  
11 something that would be open-ended, or would  
12 there be a date certain? And I think implicit  
13 with that date certain would be the thought that  
14 obviously the Act does have a preference for LNP  
15 with state oversight.

16 What would you say to the argument of  
17 setting dates as opposed to being open-ended when  
18 it comes to the issue of making sure that all  
19 involved are moving towards taking appropriate  
20 steps to put in new technology that it makes it  
21 easier to do LNP and more cost effective and that  
22 negotiations continue on in good faith going  
23 forward?

24 How would you deal with the issue of whether  
25 or not to leave this open-ended or set a date

1           certain? Because I think the idea of the date  
2           certain is that it will give impetus to people to  
3           try to move towards LNP even if it currently is  
4           something that they feel is costly.

5           MS. ROGERS: I believe in the materials that  
6           we've presented to the Commission and also in the  
7           -- in some of the other decisions that we have  
8           referenced and, in particular, Nebraska, Nebraska  
9           did set basically the date of January of 2006,  
10          which is like an 18-month period, to kind of see  
11          what the resolution is going to be of some of the  
12          unresolved issues, whether our costs are going to  
13          be greater, because they could be depending on  
14          what happens at the FCC level, and also where the  
15          demand goes as time progresses.

16          And so that's why in our Reply Brief we had  
17          also suggested instead of, you know, instead of  
18          January 1st of 2006, instead, you know, January  
19          -- June 26th of 2006.

20          I'm not -- I think that it depends on the  
21          circumstances of some of the companies. And I  
22          think that we would not have -- we would not be  
23          adverse to a date certain such as Nebraska has  
24          implemented as long as there is still enough  
25          flexibility so that if there are circumstances

1 within an individual company that would put them  
2 in a position where they would need to apply for  
3 an additional extension or an extension of that  
4 time, that there would be enough flexibility and  
5 ability for that particular company or whichever  
6 ones it might be, to come back before this  
7 Commission and request an extension of that date.

8 CHAIRMAN SAHR: And then a question that  
9 relates to the ITC and Midco situation -- and  
10 this would be for either you or Mr. Coit --  
11 Midco has made the argument that when we look at  
12 intramodal LNP, that we have more certainty and  
13 that -- although I don't know if Mr. Gerdes made  
14 the argument here, I certainly think there might  
15 be some feelings that perhaps ITC opened the door  
16 for some competition by offering cable services  
17 -- there have been some questions about who would  
18 bear the cost of LNP in those situations.

19 I think, Mr. Coit, you or maybe it was  
20 Ms. Rogers in the brief had made the point that  
21 you felt it would be the Webster and Waubay  
22 consumers that would bear that. And I guess I  
23 would imagine Midcontinent's response would be,  
24 well, you opened the door.

25 How would you have the Commission deal with

1 that situation, which, I mean, I think is  
2 significantly different than the -- than the  
3 intermodal LNP.

4 MS. ROGERS: If I could, Commission, I would  
5 like to defer that question to Ben Dickens. I  
6 think he was a little bit more involved in that  
7 other docket than I was. So I would like to  
8 defer that to him if you would allow me to do so.

9 CHAIRMAN SAHR: That would be fine.  
10 Mr. Dickens.

11 MR. DICKENS: Well, Ms. Sisak is with me,  
12 and she's going to speak to that.

13 CHAIRMAN SAHR: You guys are running out of  
14 attorneys.

15 MR. DICKENS: I won't defer to anybody else.

16 MS. SISAK: I'm prepared to answer. I think  
17 part of the problem with the Midcontinent  
18 example, you are correct that the unresolved  
19 issues are not -- maybe not of concern, or maybe  
20 not as great a concern for intramodal LNP. For  
21 example, transport shouldn't be a significant  
22 issue and, obviously, wireless to wireline  
23 porting is not an issue.

24 The problem is the way Midcontinent has  
25 requested LNP, which is on an exchange-by-

1 exchange basis. Now, for ITC it's two exchanges.  
2 And so when you look at what ITC would have to do  
3 to become LNP capable for those two exchanges,  
4 they would, in essence, have to incur almost all  
5 of the costs of LNP other than the transport  
6 costs that are in their cost exhibit. But they'd  
7 only be able to spread that over the few  
8 customers in those two exchanges.

9 And so on the one hand I do not disagree  
10 that some of the issues on intramodal porting are  
11 fewer, but on the other hand the way Midcontinent  
12 has requested LNP makes the costs really  
13 significant.

14 CHAIRMAN SAHR: Thank you. And I'll ask the  
15 follow-up question you're probably already  
16 anticipating. If that is the situation, didn't  
17 ITC open up the door for that result when it went  
18 into the cable business?

19 MS. SISAK: Well, I'm going to have to say I  
20 don't know if ITC only offers cable service in a  
21 couple of exchanges. So I guess I can't fully  
22 answer the question. I don't think they've  
23 opened the door.

24 I think the situation may be quite different  
25 if Midcontinent, for example, came in and

1 requested LNP for all ITC exchanges. The cost  
2 analysis would be different.

3 MS. SMITH: Ms. Sisak, this is John Smith.  
4 When you say the costs in those two exchanges can  
5 only be spread over those two exchanges, do you  
6 mean that any surcharge the company imposed could  
7 only be imposed in those two exchanges? Or are  
8 you just stating that costs that have a  
9 company-wide level of cost incurrences are only  
10 going to benefit those two exchanges, but those  
11 surcharges would be borne by all of the customers  
12 in the company?

13 MS. SISAK: The answer is it's our  
14 understanding of the FCC rules that the federal  
15 surcharge could only be applied to the customers  
16 in those two exchanges. And the second part of  
17 your question, though, is also true. Only the  
18 customers in those two exchanges could benefit  
19 from LNP. That's all of the other ITC customers  
20 for LNP would be inequitable from that standpoint  
21 as well.

22 COMMISSIONER BURG: Can I ask a follow-up  
23 question? The question I'd have to Ms. Sisak  
24 would even all the people in those exchanges be  
25 able to benefit, or are they only going to offer

1           it into the urban area where they have cable, or  
2           do they offer cable in the entire exchange?

3           I mean we even narrow it down to even fewer  
4           people because we're asking all the people in  
5           those exchanges to pay for services that can only  
6           benefit that metropolitan area, I'm guessing.

7           MR. SMITH: They're only certified in the  
8           towns.

9           COMMISSIONER BURG: Yeah. So then even if  
10          we tie it to those two exchanges, we're having a  
11          lot of people pay for it that aren't -- it isn't  
12          even available to, is the only challenge that I  
13          see.

14          CHAIRMAN SAHR: Although the provider that  
15          made the conscious decision to open themselves up  
16          to this form of competition could also bear the  
17          cost and they don't have to pass on to the  
18          consumer. And it's a little bit different than  
19          the people who are operating their businesses and  
20          have somebody else come into the market without  
21          the converse of that happening.

22          I would give Mr. Gerdes a chance to add  
23          anything he wants to.

24          MR. GERDES: First thing I'd observe,  
25          Commissioners, is we're getting pretty far

1 outside the evidentiary record of the proceeding.  
2 And so I hesitate to go where I need to go to  
3 answer one question.

4 Our evidence is that ITC is building out  
5 their cable and it's not in all of the exchanges  
6 at this point. They're in the process of  
7 building it out. That's what we understand from  
8 their web site.

9 As far as the rest of it is concerned, our  
10 point is as stated, and that is that this is a  
11 competitive entry. I mean, I don't --  
12 Midcontinent has to come in -- has to compete.  
13 And if ITC is going to go into Midcontinent's  
14 business, then Midcontinent has the ability to go  
15 into ITC's business, we would submit, so we can  
16 offer the same packages. I mean, it's a  
17 competitive situation.

18 As far as spreading the costs are concerned,  
19 I'd agree with what Chairman Sahr suggested would  
20 be one of our arguments and that is, well, they  
21 should have thought of that before they went into  
22 the business.

23 But the other part of it is regardless of  
24 what the FCC requirements are, if in fact, the  
25 cable business gets spread out all through the

1 ITC exchanges, eventually then you will end up  
2 having those costs all spread through the ITC  
3 exchanges. So it's a gradual thing rather than  
4 an instantaneous thing.

5 But, again, it's simply a matter of leveling  
6 the playing field in a competitive situation.  
7 And it gets a little bit far away from the  
8 philosophical aspect of local number portability,  
9 quite frankly, because, quite frankly, again, we  
10 would submit that there is no comparison between  
11 intramodal and intermodal LNP.

12 And that if you look at the law on  
13 intramodal LNP, there is -- there isn't any  
14 qualification to the obligation of a carrier to  
15 provide it as in the law. There's none. And so  
16 they have to. I mean, that's the bottom line.  
17 Now, and I guess that's the end of what I have to  
18 say.

19 CHAIRMAN SAHR: Well, and there certainly is  
20 a case that could be made saying when you're  
21 dealing with intramodal LNP, that there's much --  
22 well, there's -- there may more likely be a cost  
23 benefit in lower rates to consumers when you're  
24 dealing with services that are a direct  
25 substitute for one another as opposed to -- we

1 don't need to re-argue this whether or not you  
2 consider cellular service a substitute or  
3 compliment to wireline. I think you more than  
4 likely in those exchanges, if, at least in  
5 theory, it should work that you would get lower  
6 rates, so an additional cost might be made up for  
7 in the competition between the two parties all  
8 offering substitute services.

9 MR. GERDES: Because you are doing, in fact,  
10 what the '96 Act contemplates and that is putting  
11 true competition into the loop. I mean that's  
12 what that does. So, theoretically, it will keep  
13 prices as low as they can go.

14 MR. SMITH: Can I ask a follow-up for maybe  
15 Sisak and Dave? Is under the cable exemption,  
16 you know, when you give up your exemption when  
17 you get into cable business, does the Commission  
18 yet retain after that its authority under  
19 251(F)(2) to suspend? Is that still in existence  
20 after that?

21 MS. SISAK: Excuse me?

22 MR. SMITH: Do we still even have the  
23 ability to suspend once they've lost their rural  
24 exemption through the cable -- entering the cable  
25 business?

1 MS. SISAK: Yes, you do. Two different  
2 sections and two different exemptions.

3 MR. GERDES: I think that's right.

4 MS. SISAK: You specifically retain that  
5 authority. And I would further point out that  
6 although this might seem a little bit unfair to  
7 the cable competitors and even the CLEC  
8 competitors, the reality is Congress only thought  
9 to give some form of protection to ILEC's when it  
10 implemented 251.

11 MR. SMITH: Follow-up question maybe for  
12 Mr. Wieczorek on that. Let me ask you this with  
13 ITC then: If we were to not grant the suspension  
14 because of the issue with respect to the  
15 intramodal porting, effectively, is there any --  
16 what are the additional cost considerations,  
17 then, with respect to going to wireless?

18 MR. WIECZOREK: The only additional cost  
19 considerations that I would see would be the need  
20 to activate LNP for those switches that were not  
21 part of the exchange that they already have with  
22 Midco. They do have some of their switches --  
23 already have the software activated, but they do  
24 have some switches, and I'm not sure the switches  
25 they would have. That would be in Midco's area.

1 But, I mean, that's what I envision being an  
2 additional cost.

3 MR. SMITH: I mean there would be additional  
4 cost. It would not be de minimis.

5 MR. WIECZOREK: Well, I would guess I would  
6 argue what the definition of de minimis might be.  
7 But there would be additional cost to become LNP  
8 compliant beyond the Midco because I think it's a  
9 fair statement that they have switches outside of  
10 Midco that aren't LNP compliant yet.

11 MR. COIT: If I could comment on that  
12 briefly. I agree there would be additional  
13 costs. Obviously, you have the transport issue  
14 that is involved with the intermodal that you  
15 don't have, as we all know; and that can generate  
16 additional cost depending exactly how that is  
17 ultimately distributed in terms of the burden.

18 The other thing that I think to keep in mind  
19 with respect to intermodal portability is not  
20 just the direct cost of implementing the LNP. As  
21 I had mentioned earlier, there are significant  
22 other financial impacts associated with  
23 intermodal LNP as a result of the difference  
24 between the calling scopes between wireless and  
25 wireline.

1           So I would just encourage the -- or urge the  
2 Commission to not -- when you're looking at  
3 intramodal LNP, just don't think about the direct  
4 cost of providing the LNP service. There are  
5 other financial impacts that I think the LEC is  
6 going to experience as a result.

7           MR. SMITH: I just have one last thing, Mr.  
8 Wieczorek. You mentioned some of the exchanges  
9 on this list that already had direct connections,  
10 and I didn't catch all those companies as you  
11 were breezing through that.

12           MR. WIECZOREK: We have existing POI's with  
13 Golden West, Vivian --

14           MR. SMITH: Hang on a second.

15           MR. WIECZOREK: Vivian, Venture, West River,  
16 and Interstate. And I believe and for some of  
17 those we have more than one existing POI due to  
18 their system. I know for sure that's true with  
19 Interstate. I believe that's true for Venture.  
20 And the others I couldn't say for certain.

21           MR. SMITH: You don't with Brookings,  
22 though, huh?

23           MR. WIECZOREK: They're not on my list.

24           MR. COIT: And I think the West River you  
25 mentioned would be the West River out of Hazen,

1 North Dakota? Is it West River Telephone Co-op  
2 or West River Telephone Communications  
3 Cooperative?

4 MR. WIECZOREK: I believe it is the Mobridge  
5 branch.

6 MR. SMITH: They're not requesting the  
7 waiver.

8 MR. SMITH: Cross them out.

9 MS. SISAK: And I would like to just offer  
10 one reminder. Although Western Wireless has  
11 direct connect with the companies mentioned, the  
12 other wireless carriers operating in the area do  
13 not or may not. I'm not positive, but that is --  
14 I think we need to remember that there are other  
15 wireless carriers that will impact the cost of  
16 LNP and will be impacted by these decisions.

17 CHAIRMAN SAHR: Thank you. Any other  
18 questions from Commissioners or advisors? Seeing  
19 none, I move that we go into executive session.

20 Why don't we do this: And this can be back  
21 on the record. It's about 3:00 o'clock right  
22 now. So that we can give everybody here in  
23 Pierre and on line a little bit of certainty, we  
24 will shoot for 3:30 to come back upstairs. And  
25 at least that gives you the minimum amount of

1 time that you have or perhaps if you look at it  
2 the other way, the maximum, but it at least gives  
3 us a target. And realize the Commission may end  
4 up having to take longer, but everyone knows they  
5 have half an hour to check their messages and do  
6 whatever else they need to do.

7 (COMMISSION IN EXECUTIVE SESSION, AND HEARING  
8 RECONVENED AT 4:00 PM.)

9 CHAIRMAN SAHR: Let's go back on the record.

10 We are -- we've come out of executive  
11 session, and we're prepared to make a couple of  
12 motions.

13 I'd like to say at the outset that LNP  
14 clearly comes with a cost associated with that.  
15 And I think the Act contemplates the commissions  
16 reviewing that and looking at not only those  
17 costs, but also the public interest test. And  
18 that's what we attempted to do here.

19 Under these circumstances, that cost, when  
20 coupled with the uncertain demand, makes it  
21 extremely difficult to ask our state's consumers  
22 to bear the cost of intermodal LNP at this time.

23 And certainly another factor that I think  
24 all the Commissioners felt was out there is a  
25 current uncertainty. We have pending FCC

1 proceedings. We have pending court cases. And  
2 it really would be prudent to see how these cases  
3 proceed so we have more certainty as to the  
4 effect of requiring LNP. We also may have the  
5 ability to look and see what happens in other  
6 cases as well and see how those LNP matters  
7 proceed.

8 With that in mind, I'm going to make the  
9 first motion, which will be relating to  
10 intermodal LNP, or wireline to wireless LNP.

11 And I would move that we grant the request  
12 for suspensions until December 31, 2005.

13 COMMISSIONER HANSON: Second.

14 CHAIRMAN SAHR: And we have a second from  
15 Hanson. And I have an additional comment, but I  
16 will go ahead and let --

17 COMMISSIONER BURG: One comment first.

18 CHAIRMAN SAHR: The one thing I would say is  
19 we will work out some of the details on how the  
20 December 31st, 2005, time frame will be -- how  
21 that particular date will work as far as the  
22 procedures for how it will be -- how people can  
23 file to continue suspensions, or to have that  
24 reviewed if they feel it's necessary.

25 So although the suspension is granted until

1 December 31st, 2005, it doesn't limit the ability  
2 of the Commission to grant a further suspension  
3 from 2005, from the December 31st, 2005, on. I  
4 think that's something we'll look at in the  
5 future to see if the carriers affected would file  
6 for suspension, additional suspension.

7 One of the things I would add is I think we  
8 saw that during the hearing we had some very good  
9 negotiations take place, and I would urge people  
10 to continue looking into that and urge the  
11 parties to continue to take steps to try to move  
12 towards LNP.

13 Because no matter what the feelings of this  
14 Commission may be one way or the other, there's  
15 certainly a chance there may be ultimately an LNP  
16 obligation, and there is without a doubt some  
17 consumer benefit to LNP.

18 So I would strongly urge everyone to  
19 continue to work on these issues and to see if  
20 you can't come up with a mutually-acceptable  
21 solution without having the PUC being involved.

22 And then I think the final thing I would add  
23 is just thank you, the PUC staff. They did a  
24 great job. And I think the brief and the  
25 analysis supplied by PUC staff were excellent.

1           And although we did not follow their  
2           recommendations to a T, we certainly appreciated  
3           the analysis; and it gave us a really, I think,  
4           balanced view of the issues.

5                    COMMISSIONER BURG: Gary, did you have any  
6           comments you wanted to make, Gary, before I make  
7           mine?

8                    COMMISSIONER HANSON: Go ahead, Jim.

9                    COMMISSIONER BURG: I will concur in part  
10          and dissent in part with that motion. I concur  
11          that we grant suspension to all petitioners. I  
12          feel they met the requirement approving the  
13          necessity of suspension -- they met the  
14          requirement of proving the necessity of  
15          suspension to avoid significant adverse economic  
16          impact on users of telecommunications generally.

17                   I also feel they met the burden to avoid  
18          imposing a requirement that is unduly  
19          economically burdensome. I don't think the key  
20          is to what it costs per customer. I think the  
21          key is what the total cost is. Because the only  
22          way that you get lower per customer is by having  
23          a lot of customers, not that it's any cheaper to  
24          provide that service.

25                   And I think -- and later on I'll mention

1           that I think it can be used to better use. I  
2           believe all parties accepted the fact that LNP  
3           could be technically feasible. I don't think  
4           that was an issue. I don't believe the LNP is  
5           right for application in rural areas at this  
6           time.

7                       Several discussions -- decisions, several  
8           decisions need to be made by the FCC and numerous  
9           states have granted suspended waivers because of  
10          that and other reasons, and I agree with those.

11                      My threshold for significant economic impact  
12          and undue economic burden is quite low. I do not  
13          see public benefit due to the low estimated LNP  
14          interest and the unavailability of LNP at all in  
15          vast areas of the state. So why should those  
16          consumers bear any additional cost to provide LNP  
17          to others when very few people are going to  
18          benefit?

19                      I would further argue that the per line cost  
20          is not the proper indicator, but the total cost  
21          when you consider adverse economic impact. Total  
22          cost is a public interest economic impact. This  
23          is money not available for higher telephone  
24          communications usage, both by wireline and  
25          wireless companies.

1           The fact that transport could be paid by the  
2 wireless companies does not make those costs  
3 disappear. The money spent for transport by  
4 wireless providers is money, I feel, could better  
5 be spent for better and wider wireless services.  
6 If I had my preference -- and I believe a mistake  
7 was made in requiring wireline to wireless  
8 portability at all. I don't think -- I think  
9 it's proven to not be that desirable.

10           And so now I concurred in that part of the  
11 motion. I dissent in the part of the setting a  
12 date specific. I think it just puts us through  
13 this exercise again. I think that even the  
14 desire for LNP is actually going to wane, not  
15 grow. However, my preference would be that a  
16 review is granted on suspension based on evidence  
17 of requests for LNP as a percentage of the  
18 customers in an exchange.

19           If we took that approach and showed that the  
20 actual desirability is out there, that's what I  
21 think should trigger whether we do additional  
22 review or not, rather than just a date certain  
23 down the road on a product that I don't think is  
24 going to be taken and I think is expensive in  
25 general.

1           So with that, that's where I stand on that  
2 motion.

3           CHAIRMAN SAHR: Okay. So that resolved the  
4 issue of the intermodal LNP. We still have the  
5 issue of the LNP for intramodal purposes, which  
6 would be the ITC request for suspension; is that  
7 correct?

8           MR. SMITH: That's right.

9           CHAIRMAN SAHR: And I would move that we  
10 take that under advisement. I think all along we  
11 acknowledged that while there are similarities in  
12 these cases, that the ITC and Midco case involved  
13 some dynamics that aren't in the other cases.  
14 And I think it's appropriate at this time to take  
15 them under advisement and issue an opinion at a  
16 later date.

17           COMMISSIONER BURG: I would second that.

18           COMMISSIONER HANSON: Hanson concurs.

19           COMMISSIONER BURG: And I'd just like to add  
20 I think that there are some reasons to look at  
21 that request for intramodal LNP; however, at this  
22 point it's not nearly clear enough to me as to  
23 how those costs would be distributed. And I  
24 can't imagine that entire cost on those two  
25 counts and not finding a better way to mitigate

1           that. I think with we need to take it under  
2           advisement and investigate that a little bit  
3           farther.

4                   CHAIRMAN SAHR: With that, the hearing will  
5           be concluded. And I do want to thank all  
6           involved for their professionalism and input. It  
7           was a long process, but I think it was something  
8           that was a great learning process for everyone.  
9           Thank you.

10                   (The hearing concluded at 4:10 p.m.)

1 STATE OF SOUTH DAKOTA ) IN CIRCUIT COURT  
 2 ) :SS  
 3 COUNTY OF STANLEY ) SIXTH JUDICIAL CIRCUIT

4 I, Lori J. Grode, Registered Merit Reporter and  
 5 Registered Professional Reporter and Notary Public in  
 6 and for the State of South Dakota:

7 DO HEREBY CERTIFY that the above hearing pages 1  
 8 through 73, inclusive, was recorded stenographically by  
 9 me and reduced to typewriting.

10 I FURTHER CERTIFY that the foregoing transcript of  
 11 the said hearing is a true and correct transcript of the  
 12 stenographic notes at the time and place specified  
 13 hereinbefore.

14 I FURTHER CERTIFY that I am not a relative or  
 15 employee or attorney or counsel of any of the parties,  
 16 nor a relative or employee of such attorney or counsel,  
 17 or financially interested directly or indirectly in this  
 18 action.

19 IN WITNESS WHEREOF, I have hereunto set my hand and  
 20 seal of office at Ft. Pierre, South Dakota, this 2nd day  
 21 of September, 2004.

 My Commission Expires 08-01-07

**BEFORE THE PUBLIC UTILITIES COMMISSION  
OF THE STATE OF SOUTH DAKOTA**

<b>IN THE MATTER OF THE PETITION OF )</b>	<b>FINAL DECISION AND</b>
<b>KENNEBEC TELEPHONE COMPANY FOR )</b>	<b>ORDER; NOTICE OF ENTRY</b>
<b>SUSPENSION OR MODIFICATION OF 47 )</b>	
<b>U.S.C. § 251(B)(2) OF THE COMMUNICATIONS )</b>	<b>TC04-025</b>
<b>ACT OF 1934 AS AMENDED )</b>	

**PROCEDURAL HISTORY**

On February 12, 2004, Kennebec Telephone Company (Kennebec or Petitioner) filed a petition (Petition) pursuant to 47 U.S.C. Section 251(f)(2) and SDCL 49-31-80 seeking suspension or modification of its requirement to implement local number portability (LNP) pursuant to Section 251(b)(2) of the Telecommunications Act of 1996. From February 25 to April 23, 2004, twenty other rural local exchange carriers filed similar petitions seeking the same relief (two of these later-filed petitions, TC04-077 and TC04-085, were subsequently settled) (excluding settling petitioners, collectively, Petitioners). On April 5, 2004, the Commission issued an order granting intervention to WWC License LLC d/b/a CellularOne (WWC) and the South Dakota Telecommunications Association (SDTA). On April 19, 2004, the Commission issued an order granting Kennebec's request for interim suspension of its obligation to implement LNP pending final decision pursuant to 47 U.S.C. Section 251(f)(2) of the Telecommunications Act of 1996 and SDCL 49-31-80.

On May 4, 2004, the Commission issued an Order for and Notice of Procedural Schedule and Hearing and of Intent to Take Judicial Notice. On June 16, 2004, the Commission issued a Supplemental Order for and Notice of Hearing establishing the schedule for presentation of general and company-specific testimony in this and the other LNP dockets. On June 21-July 1, 2004, a hearing was held on this matter and the other dockets in which Petitioners seek to suspend their obligations to implement LNP. The company-specific hearing on this matter was held on June 29, 2004. On July 13, 2004, the Commission issued an Order Establishing Briefing and Decision Schedule setting this matter for oral argument and decision on August 31, 2004. On July 15, 2004, the Commission issued an Order Temporarily Suspending Local Number Portability Obligations suspending Kennebec's LNP obligations until September 7, 2004, in order to accommodate the briefing and decision schedule in the case. On August 31, 2004, the Commission heard oral arguments from the parties in this and the other LNP dockets. Following oral argument, the Commission voted unanimously to suspend Petitioners' obligations to implement intermodal local number portability pursuant to 47 U.S.C. §251(b)(2) and SDCL 49-31-81. A majority of the Commission voted to suspend Petitioners' intermodal LNP obligations until December 31, 2005. Commissioner Burg dissented from this portion of the decision, indicating that he supported an indefinite suspension of intermodal LNP obligations for all Petitioners requesting suspension of LNP obligations. The Commission voted unanimously to defer decision regarding intramodal number portability requirements without specifying whether the deferral applied to all LNP dockets or just those in which Midcontinent Communications had intervened and objected to suspending intramodal LNP requirements. On September 4, 2004, the Commission issued an order temporarily suspending all LNP requirements for all petitioners until September 30, 2004, in order to provide sufficient time for the finalization of the findings of fact and conclusions of law and to render a final decision regarding intramodal LNP. On September 22, 2004, the Commission voted unanimously to suspend intramodal LNP obligations for all Petitioners until December 31, 2005, with special conditions for those dockets in which Midcontinent remains an intervening party.

Having considered the evidence of record and applicable law, the Commission makes the following Findings of Fact, Conclusions of Law and Final Decision and Order:

### FINDINGS OF FACT

"TR" refers to the Transcript of Proceedings of the hearing held on June 21-July 1, 2004, in this docket and the other LNP suspension dockets. References will be to TR and page number(s).

1. Kennebec filed the Petition on February 12, 2004. On February 19, 2004, the Commission electronically transmitted notice of the filing and the intervention deadline of March 5, 2004, to interested individuals and entities. WWC filed to intervene on March 4, 2004. SDTA filed to intervene on March 5, 2004. On April 5, 2004, the Commission issued an order granting intervention to WWC and SDTA.

2. By its May 4, 2004 Order for and Notice of Procedural Schedule and Hearing and of Intent to Take Judicial Notice and June 16, 2004 Supplemental Order for and Notice of Hearing, this matter was duly noticed for hearing on June 21-July 1, 2004, with the company-specific hearing on this matter to be held on June 29, 2004. The hearing was held as scheduled.

3. The parties to this docket agreed that a temporary suspension of LNP obligations until September 7, 2004, should be granted to Kennebec to enable a reasonable briefing and decision schedule in this and the other LNP suspension dockets. On July 15, 2004, the Commission issued an Order Temporarily Suspending Local Number Portability Obligations suspending Kennebec's LNP obligations until September 7, 2004, in order to accommodate the briefing and decision schedule in the case. No objection was filed to this order. On September 4, 2004, the Commission issued an Order Temporarily Suspending Local Number Portability Obligations suspending Kennebec's LNP obligations until September 30, 2004, in order to provide sufficient time for the finalization of the findings of fact and conclusions of law and to render a final decision regarding intramodal LNP.

4. The Federal Communications Act of 1934 as amended by the Telecommunications Act of 1996, 47 U.S.C. chapter 5 (the "Act") requires local exchange carriers "to provide, to the extent technically feasible, number portability in accordance with the requirements prescribed by the [Federal Communications] Commission." 47 U.S.C. § 251(b)(2). In *Matter of Telephone Number Portability*, CC Docket 95-116, Memorandum Opinion and Order and Further Notice of Proposed Rulemaking, FCC 03-284 (November 10, 2003) (the "*Intermodal Order*"), the Federal Communications Commission (FCC) required local exchange carriers that are located outside of the top 100 metropolitan statistical areas to provide LNP and to port numbers to wireless carriers. Pursuant to this order, local exchange carriers were required to provide LNP by the later of May 24, 2004, or six months after the date that the local exchange carrier received a bona fide request.

5. 47 U.S.C. §153(30) defines "number portability" as follows:

The term "number portability" means the ability of users of telecommunications services to retain, at the same location, existing telecommunications numbers without impairment of quality, reliability, or convenience when switching from one telecommunications carrier to another.

In the *Intramodal Order*, ¶¶ 25 and 28, the FCC addressed the question of "at the same location" as follows:

[W]e find that . . . LECs must port numbers to wireless carriers where the requesting carrier's coverage area overlaps the geographic location of the rate center to which the number is assigned. . . . We conclude that porting from a wireline to a wireless carrier that does not have a point of interconnection or numbering resources in the same rate center does not, in and of itself, constitute location portability, because the rating of calls to the ported number stays the same.

The term "intramodal number portability" as it applies to the Petition refers to the ability to port a number from a wireline carrier, such as Petitioner, to another wireline carrier. The term "intermodal number portability" as it applies to the Petition refers to the ability to port a number from a wireline carrier, such as Petitioner, to a wireless carrier. The Petition seeks suspension of both intermodal and intramodal number portability obligations. No wireline carrier other than Petitioner is a party to this docket.

6. The determinations that the Commission must make before suspending or modifying an RLEC's obligation to provide LNP to requesting carriers are set forth in SDCL 49-31-80 which reads as follows:

Consistent with 47 U.S.C. § 251(f)(2) as of January 1, 1998, the commission may grant a suspension or modification of any of the interconnection or other requirements set forth in 47 U.S.C. §§ 251(b) and 251(c), as of January 1, 1998, to any local exchange carrier which serves fewer than two percent of the nation's subscriber lines installed in the aggregate nationwide. Any such carrier shall petition the commission for the suspension or modification. The commission shall grant the petition to the extent that, and for such duration as, the commission determines that the requested suspension or modification is consistent with the public interest, convenience, and necessity and is necessary:

- (1) To avoid a significant adverse economic impact on users of telecommunications services generally;
- (2) To avoid imposing a requirement that is unduly economically burdensome; or
- (3) To avoid imposing a requirement that is technically infeasible.

The commission may suspend enforcement of the requirement or requirements identified in the petition pending final action on the requested suspension or modification.

The language and substance of SDCL 49-31-80 and 47 U.S.C. § 251(f)(2) are essentially the same.

7. By its Order for and Notice of Procedural Schedule and Hearing and of Intent to Take Judicial Notice issued on May 4, 2004, the Commission gave the following notice of intent to take judicial notice:

The Commission hereby gives notice pursuant to SDCL 1-26-19(3) that it intends to take judicial notice of the fact that Petitioner is a local exchange carrier with fewer than 2 percent of the nation's subscriber lines installed in the aggregate nationwide. Any party objecting to this taking of judicial notice shall serve notice of such objection on the Commission and the parties prior to the hearing.

No party to the docket served notice of objection or otherwise noted any objection to this taking of judicial notice. Accordingly, the Commission takes judicial notice of the fact and finds that Kennebec is a local exchange carrier with fewer than 2 percent of the nation's subscriber lines installed in the aggregate nationwide pursuant to SDCL 49-31-80 and 47 U.S.C. §251(f)(2).

8. Kennebec is a rural local exchange carrier (RLEC) that provides local exchange and exchange access services to 751 access lines of which 31 are Lifeline service. Kennebec Ex 1, p. 1; 47 U.S.C. §153(37).

9. Two wireless carriers have made bona fide requests for LNP from Kennebec. TR 957. No wireline carrier has made a bona fide request for LNP. Kennebec Ex 1, p. 4.

10. Under SDCL 49-31-80, the Commission is required to determine the extent to which the requested suspension or modification is consistent with the public interest, convenience and necessity and whether the suspension or modification is necessary to avoid at least one of the three adverse effects set forth in subdivisions (1), (2) and (3) of the statute.

11. There was essentially no disagreement by any of the experts who testified on behalf of Petitioners that LNP is technically feasible. TR 175, 997. The testimony of Petitioners' witnesses to the effect that LNP was not technically feasible was based upon the present absence of the necessary switch upgrades and direct trunk connections with requesting carriers conforming to existing interconnection agreements. We find that this does not establish technical infeasibility, although the Commission recognizes that Petitioner would require a period of time to install and implement the necessary technology. The switch upgrade and interconnection facilities assumed by Petitioners' witnesses to establish their transport costs demonstrate that LNP is technically feasible. According to several of the Petitioners' manager witnesses, LNP is technically feasible. Bryan Roth, manager for McCook, agreed that LNP was technically feasible. TR. at 829. Pamela Harrington, general manager of Roberts County and RC, stated that LNP is technically feasible with the proper upgrades. TR. at 1049. Dennis Law, Golden West's manager, stated that his companies are technically able to connect to the Qwest tandem. TR. at 791-792. It is technically feasible for each of the Petitioners to implement LNP. It would take action on Petitioners' parts and would cost Petitioners money in varying levels to implement LNP, but the technology and network facilities exist for it to be implemented. The decisions in each of Petitioners' cases must therefore turn upon the two economic standards and the public interest determination.

12. The Commission finds that granting a suspension of Kennebec's local number portability obligations under 47 U.S.C. §251(b)(2) until December 31, 2005, is consistent with the public interest, convenience and necessity. The Commission further finds that at the present time, granting a suspension to Kennebec is necessary to avoid a significant adverse economic impact on Kennebec's users of telecommunications services generally and to avoid imposing a requirement that is unduly economically burdensome on Kennebec. These findings are based upon the specific findings set forth below.

13. In a June 18 letter to the President of the National Association of Regulatory Utility Commissioners (NARUC), the Chairman of the FCC, Michael Powell, recognized the potential burden of LNP implementation on small businesses, particularly rural local exchange carriers, and encouraged state commissions to exercise their authority under 47 U.S.C. §251(f)(2) to grant the requested relief if the State Commissions deem it appropriate. TR 566-568; Venture Ex 4. Chairman Powell directed "State Commissions to consider the burdens on small businesses in addressing those waiver requests and to grant the requested relief if the State Commissions deem it appropriate." Venture Ex 4.

14. At least part of the determination of whether a suspension of a Petitioner's LNP requirements is consistent with the public interest, convenience and necessity involves weighing the costs to the LEC and/or its users against the benefits to be derived from the incurrence of such costs. *Order Granting Suspension, Applications Nos. C-3096, et seq.*, Nebraska Public Service Commission (July 20, 2004). As discussed in detail below, the Commission finds that at this time, the benefits to consumers from LNP in the rural areas served by Petitioners simply have not been sufficiently demonstrated to outweigh the burden that imposing LNP implementation at this time will place on Petitioners and the rural citizens who rely on Petitioners for essential, provider-of-last-resort telephone service.

15. Another factor that we find is highly relevant to our determination of whether the granting of the requested suspension at this time is in the public interest involves the significant level of uncertainty that currently exists concerning (i) the appropriate technical solution for transport of calls to ported numbers in rural areas, (ii) the respective responsibilities, and attendant costs, of providing transport for calls to ported numbers outside the local calling area of Petitioners, (iii) the routing and rating of calls to ported numbers, (iv) the porting interval, (v) the demand for number porting, particularly in the areas where signal coverage is spotty or non-existent and (vi) the extent to which the presence of LNP is a marginal factor in the consumer's purchasing decision for alternative services such as wireless service. Suspending Petitioners' LNP obligations until December 31, 2005, will enable the unresolved issues concerning transport, routing and rating and porting interval to be addressed in the proceedings pending before the FCC, and will provide a period of time for (vii) the Petitioners and intervenors to continue to investigate, negotiate and hopefully resolve many of the interconnection, transport and routing and rating issues between them, (viii) wireless carriers to continue their build-outs of facilities to provide more extensive and reliable signal coverage throughout Petitioners' service territories and (ix) for the accumulation of data concerning the deployment of LNP in other areas and concerning the benefits of LNP -- particularly whether demand for LNP in fact materializes and is in fact demonstrated to be of material significance in the consumer's purchasing decision for alternative services.

16. A final factor that we believe is appropriate to consider in any public interest decision involving rural local exchange carriers is reflected in one of the central policy objectives of the Act and SDCL Chapter 49-31 - the duty to provide and preserve universal service. 47 U.S.C. §§ 214(e) and 254; SDCL 49-31-76 and 49-31-78 through 49-31-81. Petitioners, all of whom are the incumbent local exchange carriers and eligible telecommunications carriers under the Act, shoulder the responsibility for providing essential telecommunications to all persons within their service territories as carriers of last resort.

17. The record amply demonstrates that the costs to Kennebec to implement number portability will be significant. These costs fall into three general categories: switch upgrade, transport and recurring operational costs. The evidence addressing Kennebec's costs of implementing LNP was conflicting. Kennebec's cost witness projected the non-recurring cost for Kennebec to implement LNP to be \$98,569 excluding transport and \$99,970 including transport. He estimated the recurring monthly costs for Kennebec to be \$381 excluding transport and \$5,218 including transport. Kennebec's cost witness projected that these costs would translate into an LNP cost of \$3.45 per line per month excluding transport and \$10.07 including transport. WWC Ex 18. WWC's witness projected a non-recurring cost of \$50,594 excluding transport and \$50,994 including transport. WWC Ex 18; TR 1019-1020, 1024-1026. WWC's cost witness projected recurring monthly cost for Kennebec at \$243 excluding transport and \$361 including transport. WWC Ex 18. WWC projected these costs would translate into an LNP cost of \$1.84 cost per line per month excluding transport and \$2.01 including transport. WWC Ex 18.

18. One of the major reasons for the differences in projected per line costs concerned switch-related investment costs. The issue is whether generic upgrades should be included as a cost. WWC's witness agreed that Kennebec could not actually implement LNP without the generic upgrade but stated that the upgrade is "part of ongoing switch operations, maintenance investments, and includes other features and capability sets unrelated to LNP and, therefore, shouldn't be included when one's trying to estimate the cost of what LNP costs for a company." TR. at 1024-25. WWC accordingly excluded the costs for the generic upgrade to Kennebec's switch in the amount of \$31,400. TR at 1024.

19. Kennebec's cost witness did not check with Kennebec as to whether it had planned to upgrade Kennebec's host switch at any time in the future. TR. at 1006. Kennebec's witness further stated that he did not know what other benefits would be derived from the generic upgrade or if it provides extra services. TR. at 999 to 1000.

20. The Commission finds that the costs for the generic upgrades can be considered in this proceeding. It is not disputed that the generic upgrade will need to be completed before LNP can be implemented. Whether the costs can be included in an LNP customer surcharge is not dispositive when considering whether the costs of LNP for the rural LEC and its users meet the statutory standards for suspension -- these costs can still be recovered from the customer through an increase in local rates and will in any case result in a cost incurrence by Kennebec. Thus, we find that the total and per line costs excluding transport will be closer to Kennebec's estimate than to Western Wireless' estimate. The Commission further finds, however, that information concerning the switch upgrade plans of Kennebec would be useful information and that if Kennebec later asks for a further suspension, Kennebec should provide more information regarding when it plans to do a generic upgrade.

21. The second major area of disagreement regarding the costs of implementing LNP for Kennebec and the other Petitioners was transport. Transport costs comprised a significant portion of the costs to implement LNP as estimated by all Petitioners including Kennebec. Transport costs as estimated by WWC were considerably smaller. Kennebec proposed a transport method using a DS1 (T1) circuit installed between the Kennebec host switch to each wireless carrier that is currently providing service in Kennebec's territory that does not already have a direct trunk into Kennebec's network. TR. at 993.

22. By contrast, WWC's routing method was based on converting the existing one-way, incoming trunk from the Qwest tandem, used to deliver Qwest traffic to Kennebec's customers via Kennebec's host switch, into a two-way trunk and using Qwest as a transit carrier. According to WWC's witness, this routing method would result in a significantly lower estimated monthly recurring cost for transport for Kennebec - \$4,837 per month as calculated by Kennebec's witness vs. \$118 per month as calculated by WWC's witness.

23. The basis for the routing methodology proposed by Kennebec's cost witness was:

. . . First, routing of local calls to a point of interconnection located within the RLEC exchange is consistent with the terms of the Interconnection Agreement entered into between Western Wireless and RLECs.

Second, RLECs do not route local traffic to a point of interconnection outside of its local exchange or service area. Requiring RLECs to route traffic to a point of interconnection outside of its exchange or service area would add the responsibility of a LEC from providing local exchange service and exchange access to providing interexchange service as well. TR 994.

24. In the *Intramodal Order*, the FCC stated in ¶ 1:

[W]e clarify that nothing in the Commission's rules limits porting between wireline and wireless carriers to require the wireless carrier to have a physical point of interconnection or numbering resources in the rate center where the number is assigned. . . . In addition, . . . we clarify that wireline carriers may not require wireless carriers to enter into interconnection agreements as a precondition to porting between the carriers.

25. The FCC left open the unanswered questions presented by this holding with respect to how carriers are to handle routing and transport of calls to ported numbers in the absence of points of interconnection between the LEC and the wireless carrier. The FCC stated as follows with respect to this issue in Footnote 75 at ¶ 28 and in ¶ 40 of the *Intramodal Order*.

<sup>75</sup>As noted in paras. 39-40 below, there is a dispute as to which carrier is responsible for transport costs when the routing point for the wireless carrier's switch is located outside the wireline local calling area in which the number is rated. See Sprint Petition for Declaratory Ruling. The existence of this dispute over transport costs does not, however, provide a reason to delay or limit the availability of porting from wireline to wireless carriers.

We make no determination, however, with respect to the routing of ported numbers, because the requirements of our LNP rules do not vary depending on how calls to the number will be routed after the port occurs. Moreover, as CTIA notes, the rating and routing issues raised by the rural wireline carriers have been raised in the context of non-ported numbers and are before the Commission in other proceedings. Therefore, without prejudging the outcome of any other proceeding, we decline to address these issues at this time as they relate to intermodal LNP.

The FCC is considering this issue in a pending docket. See *In the Matter of Sprint Corp. Petition for Declaratory Ruling Regarding the Routing and Rating of Traffic by ILECs*, CC-Docket 01-92, Petition of Sprint, May 9, 2002.

26. WWC produced evidence through its cost witness, Mr. Williams, that its suggested transport method of adding a bi-directional capability to the trunk currently carrying Qwest traffic into Kennebec's switch from the Qwest tandem in Sioux Falls was technically feasible and was proposed as a transport mechanism, subject to resolution of transport rate issues with Qwest, by certain ILEC members of the Minnesota Independent Coalition before the Minnesota PUC in *Matter of the Petition by the Minnesota Independent Coalition for Suspension or Modification of Local Number Portability Obligations Pursuant to 47 U.S.C. §251(f)(2)*, Docket No. P-et al/M-04-707. TR 579-582, 587-589; WWC Ex 6. A temporary suspension of LNP obligations was ultimately granted by the Minnesota PUC in this docket on July 8, 2004. As of the decision date, however, the transport pricing issues between the petitioning MIC members and Qwest had still not been resolved, and in its Order Granting Suspension, the MPUC was required to provide a 90 day period for negotiation after which the matter would come back to the commission for arbitration.

27. Mr. Williams's belief that the Minnesota Qwest tandem solution was available to Petitioners was based upon his prior experience with Qwest's provisioning of services, his review of Qwest's Statement of Generally Available Terms and Conditions (SGAT) and tariffs. TR 552. Mr. Williams further testified:

"There are Interconnection Agreements available today in South Dakota that can be opted into within a matter of days, and Western Wireless has such an agreement. That agreement calls for transit at three-tenths of a cent, and there's nothing to prevent any carrier from opting into that agreement. TR 734.

Based upon this, Mr. Williams testified that he estimated the cost to Petitioners of transport provided by Qwest to be .3 cents per minute. TR 552, 734.

28. WWC's witness also testified, however, that he had not in fact discussed this proposal with Qwest. TR 932. Furthermore, WWC did not make reference to the specific tariff or SGAT provisions or rate schedules upon which he based these conclusions, and the Commission has been unable to determine from a review of the Qwest tariffs and SGAT alone whether WWC's proposed transport mechanism would in fact be available to Kennebec for the purpose of transporting calls to ported numbers outside the local exchange area as local calls or, if so, what the actual pricing and terms of such service would be.

29. With respect to the existing Type 2 Wireless Interconnection Agreement between U S West Communications, Inc. and WWC License, L.L.C. for the State of South Dakota, it is not obvious that Kennebec would be able to opt into the agreement. The agreement is a comprehensive wireless to wireline interconnection agreement specifically designed for the situation where one party is a wireless carrier. In *Matter of Review of the Section 251 Unbundling Obligations of Incumbent Local Exchange Carriers*, CC Docket No. 01-338, Second Report and Order, FCC04-164 (rel. July 13, 2004), the FCC took away the right of carriers to opt into only selected terms of Section 251 interconnection agreements, stating in ¶ 1:

In this Order, we adopt a different rule in place of the current pick-and-choose rule. Specifically, we adopt an "all-or-nothing rule" that requires a requesting carrier seeking to avail itself of terms in an interconnection agreement to adopt the agreement in its entirety, taking all rates, terms, and conditions from the adopted agreement.

We accordingly do not find that Kennebec could necessarily simply opt into WWC's interconnection agreement with Qwest either in its entirety or as to only one particular provision.

30. WWC stated at the hearing that WWC would pay for transport on an interim basis, until the final FCC decision on transport, provided the Qwest tandem-based routing method was used. TR. at 939. The Commission finds, however, that this temporary commitment could leave Kennebec with the burden of paying the costs of transport outside of its service area in the future, that there is no certainty at this time as to what those costs would be and that Kennebec would then have been compelled to incur the substantial switch upgrade and other non-transport costs of LNP implementation.

31. Lastly, as to this issue of transport, we note the testimony of Mr. Bullock, cost witness for several of Petitioners, who stated:

In telephone toll traffic there's a considerable track record of interexchange carriers providing toll service, and I think it's safe to assume that the bugs have been worked out of the interfaces that are required between local exchange access service providers such as the local exchange companies we're talking about here today and interexchange carriers such as AT&T and Sprint that reliably pass information back and forth to enable the proper routing and rating of calls and the proper rating and identity of the calling party.

In terms of the exchange of local traffic through an intermediate tandem service provider, I'm not so sure that's a safe assumption to make. TR 879-880.

32. Other factors that influenced the differences between Kennebec's and WWC's estimates of the cost of LNP implementation primarily involved the ability of Kennebec to reduce administrative mobilization costs through sharing with other RLECs.

33. Although there was evidence in the record that at least some of the Petitioners', including Kennebec, could include at least some costs of implementing LNP in the Petitioners' applications for universal service support funds from the Universal Service Administration Company, TR 954, the FCC, in two recent orders and the Federal-State Joint Board on Universal Service have recently recognized the increasing cost of providing universal service support in a competitive environment and recognized the propriety of both the FCC and state commissions considering the impact on the universal service fund in their public interest determinations. *Federal-State Joint Board on Universal Service, Virginia Cellular, LLC Petition for Designation as an Eligible Telecommunications Carrier for the State of Virginia*, CC Docket No. 96-45, Memorandum Opinion and Order, FCC 03-338, ¶ 4 (rel. Jan. 22, 2004) ("*Virginia Cellular Order*"); *Federal-State Joint Board on Universal Service, Highland Cellular, Inc. Petition for Designation as an Eligible Telecommunications Carrier in the Commonwealth of Virginia*, CC Docket No. 96-45, Memorandum Opinion and Order, FCC 04-37, ¶ 4 (rel. April 12, 2004); *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, Recommended Decision, FCC 04J-1 (re. February 27, 2004).

34. We find that implementing LNP at this time could cost Kennebec or its users as much as \$3.45 per line per month excluding transport and that the costs of transport, if ultimately held to be Kennebec's responsibility, would raise that monthly cost even higher.

35. The areas served by Kennebec are older and have lower incomes than the nation as a whole. Kennebec Ex 1.

36. All Petitioners, WWC and SDTA presented evidence of demand for LNP or the lack thereof. Demand for LNP has relevance both to the costs to be incurred by Petitioners to provide LNP and to the benefit side of a cost-benefit analysis for both the public interest and adverse economic effect analyses. In the case of many of the Petitioners, differences in estimated ports produced differences in recurring costs, but in Kennebec's case, both Kennebec's and WWC's cost witnesses used the same estimated porting number to derive estimated costs.

37. Davis, the cost witness for Beresford, Kennebec, Midstate, Roberts County/RC, and Western, used porting estimates when he calculated the cost to implement LNP. However, at the hearing, he stated that his porting numbers should not be taken as "any sort of estimate for demand" and that he did not do any type of empirical analysis. TR. at 1009-10. He just picked a number to "show a relationship between a specific demand level and what the resulting costs would be." TR. at 1009.

38. Kennebec's manager testified that Kennebec had received no requests for LNP from its customers. Kennebec Ex 1. In the responses to a survey conducted by Kennebec of its customers, a "second common theme was that wireless service was poor or nonexistent in many of the areas served by Kennebec. Id. The survey did demonstrate that some portion of Kennebec's customers would be willing to pay for the availability of LNP. 21.4% of survey respondents testified that they would be willing to pay \$0.50 for LNP. This percentage dropped to 11.8% at \$1.00, 2.6% at \$2.00 and 1.6% at \$3.00. Id.

39. Steven Watkins, a witness for the Petitioners, stated that NeuStar reported that "95% of wireless ports have been from one wireless carrier to another and only 5% of wireless ports were between wireline and wireless carriers." SDTA Ex 1 at 11. He noted that these numbers were based on wireless to wireline reporting in more urban areas and expected that interest in rural areas would be even less. Id. He stated that in rural areas "the public does not recognize wireless service as an absolute substitute for wireline service" due to reliability and that "demand for wireless service is more for its mobile capability[.]" Id. at 12. He further stated that even for customers who decide to give up their wireline service for wireless generally will try wireless service first and then drop their wireline service. Id. Thus, there would not be a need to port numbers in that case. Id.

40. Bullock, the cost witness for Alliance/Splitrock, Armour/Bridgewater/Union, Faith, Golden West/Vivian/Kadoka, McCook, Sioux Valley, Tri-County, and Valley, stated that he assumed that if LNP were required, the wireless companies would begin an aggressive marketing campaign which may generate some porting activity. TR. at 890. He also assumed that some of the customers would port back to the wireline carrier. Id. He stated that he did not do a scientific analysis since there is no track record for number porting in rural areas. Id. He also stated that his porting estimates were not based on the number of wireless carriers operating in any particular area. Id. at 891. Bullock's estimated number of ports were higher than DeWitte's and ranged from 0.694% to 3.061% of a company's access lines per year.

41. WWC's witness, Williams, stated that WWC's porting estimates were "based on what we thought we would be able to obtain as a result of both our coverage and our view of what their demographics represented." TR. at 1031. His estimates for ports, based on each company's number of access lines, ranged from a low of 2.743% for Golden West to a high of 3.528% for Brookings. WWC Ex 9, 15, 18, 19. Williams further stated that, for most of the companies, the numbers are close to what WWC would expect in WWC's rural areas, which is approximately 15 percent intermodal porting over a five year period. TR. at 1031. He assumed that WWC would have about 45% of the total estimated ports. TR. at 690. Williams stated that there has not yet been any experience in intermodal porting in rural service areas so far. Id. He went on to state that there is a track record for wireline to wireline portability and that has resulted in an annual migration of 3.5% to 4.5%. Id. at 1033. He also stated that he would not expect wireline to wireless migration to be that high. Id.

42. The demand for porting will likely fall somewhere in between the numbers as forecasted by the Petitioners and those set forth by WWC. WWC's estimates are probably too high based on a number of factors. First, according to Williams' own testimony, wireline to wireline portability on a national basis has only resulted in porting percentages of 3.5% to 4.5%. TR. at 1033. Moreover, a survey regarding wireless porting showed that only 5% of wireless ports nationwide were between wireline and wireless carriers. SDTA Ex 1 at 11. On the other hand, DeWitte's estimates that averaged less than two tenths of one percent appear to be somewhat low. For example, in Kennebec, 12% of the survey respondents stated they would be willing to pay a dollar a month in order to have the ability to port their wireline numbers to their wireless carrier. TR. at 965. In addition, one of the cost witnesses, Bullock, used estimates that ranged from 0.694% to 3.061%.

43. The "benefit" to be derived from LNP for a given company's customers is in part dependent on demand. The uncertainty concerning the number of ports to be expected does interject an additional element of uncertainty into the recurring costs for Petitioners to provide LNP. To the extent that the number of ports increases, however, and thereby increases the costs of providing LNP, this increase in costs due to greater demand could be argued to be balanced, in terms of cost-benefit analysis by the greater benefit to be received by Petitioners' customers.

44. In *Matter of Telephone Number Portability*, CC Docket No. 95-116, First Report and Order and Further Notice of Proposed Rulemaking, 11 FCC Rcd 8352, ¶ 29 (1996) (*First Report and*

Order), the FCC found that local number portability was a significant factor limiting a customer's decision to switch telecommunications service providers. In the *Intramodal Order*, the FCC extended this reasoning to intermodal portability. However, the FCC in *Virginia Cellular* and again in *Highland Cellular* recently emphasized that competition *per se* is not a sufficient basis upon which Commissions should base public interest decisions involving rural, high cost service areas. Although WWC presented evidence as to the number of ports it expected to obtain, TR 1033, no empirical evidence was introduced to demonstrate that LNP would materially increase the number of customers subscribing to wireless service within Petitioners' service areas or, stated conversely, that the inability to port landline phone numbers to a wireless phone within Petitioners' service areas is a significant negative factor influencing potential customers for wireless service to forego purchasing WWC's service. Petitioners provided evidence that WWC is successfully competing for customers within Petitioners' service territories without intermodal LNP. TR 312. WWC itself introduced a survey that demonstrated that wireless market penetration would be significant. The survey results were not dependent on LNP. TR 645-646. WWC Ex 11. Brookings's Manager testified that as a result of migration of customers, primarily college students, from landline to totally wireless, Brookings had lost 1,200 access lines over the past 3 years. TR 311. He further testified, "[W]e have pretty fair competition without local number portability. . . . [I]n an environment where competition is being served, the customers are, in fact, migrating as they desire from wireline to wireless." TR 312. Midstate's manager testified that in its CLEC operation in Chamberlain/Oacoma, LNP had not been a significant competitive driver in the intramodal arena. Out of Midstate's 787 customers, only 8 were ported numbers. TR 976.

45. There are presently at least three sources of significant uncertainty concerning the obligations and resulting costs to Petitioners and their customers to implement LNP in their rural service areas. These three sources of significant uncertainty are: (i) the pending appeal of the *Intramodal LNP Order* in *United States Telecom Assn. v. FCC*, Cases No. 03-1414 and 03-1443 (D.C. Cir.); (ii) the unresolved apportionment of interconnection and transport obligations of the RLEC and the requesting wireless carrier; and (iii) the porting interval that the RLEC must meet. The latter two of these uncertainties arise from the language in paragraph 1 of the *Intermodal Order* in which the FCC stated:

[W]e clarify that nothing in the Commission's rules limits porting between wireline and wireless carriers to require that wireless carrier to have a physical point of interconnection or numbering resources in the rate center where the number is assigned. . . . In addition, . . . we clarify that wireline carriers may not require wireless carriers to enter into interconnection agreements as a precondition to porting between the carriers. We also decline to adopt a mandatory porting interval for wireline-to-wireless ports at the present time, but we seek comment on the issue as noted below.

Proceedings are currently pending before the FCC to address these unresolved issues.

46. Lastly, WWC's witness stated that it would be appropriate for the Commission to give Kennebec a suspension until March 31, 2005. TR. at 661-62.

47. Given the projected significant costs of providing LNP, the limited demonstrated present demand for LNP, the older and poorer demographic characteristics of Kennebec's population base and the uncertainties currently attending LNP implementation and provision in Petitioners' territories, the Commission finds that the cost-benefit equation weighs in favor of suspending Kennebec's LNP obligations for a period of time within which some of the uncertainties might be resolved. Kennebec

would benefit from additional certainty which will result from the FCC's acting on issues such as porting intervals and transport and routing issues. After the FCC decisions are issued, Petitioners and the Commission should have a clearer picture of what costs must be incurred to implement LNP. The decisions may result in lower projected costs or higher projected costs, but either way, there should be more certainty. Further, the additional time should result in the ability to more accurately predict demand based on what has occurred in other rural areas. Depending on the demand that is experienced in other rural areas where LNP has been implemented and the more certain cost inputs, it is possible that a further suspension might be justified. On the other hand, if substantial demand or other demonstration of marginal benefit is demonstrated, then the Commission may decide to deny further suspension requests.

48. The Commission accordingly finds that it is consistent with the public interest convenience and necessity to suspend Kennebec's obligations under 47 U.S.C. §251(b)(2) and SDCL 49-31-81 to provide local number portability to requesting carriers until December 31, 2005.

49. With respect to the additional standards set forth in SDCL 49-31-80 and 47 U.S.C. §251(f)(2), the Commission finds that the first two standards, subdivisions (1) and (2), focus on economic impacts. The first standard is centered on users, i.e. customers. This requires the Commission to make a judgment as to what level of adverse economic impact on customers renders the impact "significant." The judgment of whether an impact is significant is in turn influenced by what benefits flow to the customers from imposition of the impact.

50. The second standard requires the Commission to look at whether implementation of LNP would impose a requirement that is unduly economically burdensome. The statutory language does not specify as to whom the level of burdensomeness is to be assessed. The Commission concludes that this standard should be applied to assess the burdensomeness of the requirement on both the consumer and the company. Since the company is the petitioner, it seems probable that in the absence of language to the contrary, the language refers to the petitioner. Other reasons for treating this criterion as applicable to both company and customers include the uncertainties surrounding how the costs of LNP will be distributed between the company and its consumers and the difficulty, at this point, of determining with any degree of certainty the surcharge amount that could be charged by the company to its customers.

51. Given the significant costs of implementing and providing LNP services in the Kennebec area, the current absence of customer requests for LNP, the apparent low demand for the availability of LNP, the absence of any alternative wireline service in the Kennebec area and the presence of significant coverage gaps in wireless service in Kennebec's territory at this time, the Commission finds that suspending Kennebec's LNP obligations until December 31, 2005, is necessary to avoid a significant adverse economic impact on the users of Kennebec's telecommunications services generally.

52. Based upon the same findings, the Commission further finds that suspending Kennebec's LNP obligations until December 31, 2005, is necessary to avoid imposing a requirement that is unduly economically burdensome on Kennebec.

#### CONCLUSIONS OF LAW

1. The Commission has jurisdiction, pursuant to SDCL 49-31-80, 47 U.S.C. § 251(f)(2) and ARSD 20:10:32:39, to hear and decide the Petition and to issue an order suspending or modifying Kennebec's obligations to implement local number portability pursuant to 47 U.S.C. §251(b)(2) and

SDCL 49-31-81. The Commission had authority pursuant to SDCL 49-31-80 and 47 U.S.C. §251(f)(2) to issue a suspension of Kennebec's LNP obligations pending final action on Kennebec's requested suspension and to issue a temporary suspension to September 30, 2004.

2. SDCL 49-31-80 and 47 U.S.C. §§251(f)(2) give the Commission authority to grant a suspension or modification of local number portability obligations if the local exchange carrier has fewer than two percent of subscriber lines nationwide and the commission determines that the requested suspension or modification is consistent with the public interest, convenience, and necessity and is necessary:

- (1) To avoid a significant adverse economic impact on users of telecommunications services generally;
- (2) To avoid imposing a requirement that is unduly economically burdensome; or
- (3) To avoid imposing a requirement that is technically infeasible.

The commission may suspend enforcement of the requirement or requirements identified in the petition pending final action on the requested suspension or modification.

3. In *Matter of Implementation of the Local Competition Provisions of the Telecommunications Act of 1996*, CC Docket No. 96-98, FCC 96-325, 11 FCC Rcd 15499 (1996), the FCC adopted the rule codified at 47 U.S.C. §51.405(d), which reads as follows:

(d) In order to justify a suspension or modification under section 251(f)(2) of the Act, a LEC must offer evidence that the application of section 251(b) or section 251(c) of the Act would be likely to cause undue economic burden beyond the economic burden that is typically associated with efficient competitive entry.

This rule was vacated by the Eighth Circuit Court of Appeals in *Iowa Utils. Bd. v. F.C.C.*, 219 F.3d 744 (8th Cir. 2000). The Commission accordingly concludes that this standard and rule does not bind the Commission's discretion in this case.

4. Kennebec is a local exchange carrier serving fewer than 2 percent of the nation's subscriber lines installed in the aggregate nationwide. Kennebec is accordingly entitled to petition for suspension of its obligations to provide local number portability.

5. The first two standards, subdivisions (1) and (2), focus on economic impacts. The first standard is centered on users, i.e. customers. This requires the Commission to make a judgment as to what level of adverse economic impact on customers renders the impact "significant." The judgment of whether an impact is significant is in turn influenced by what benefits flow to the customers from imposition of the impact.

6. The second standard requires the Commission to look at whether implementation of LNP would impose a requirement that is unduly economically burdensome. The statutory language does not specify as to whom the level of burdensomeness is to be assessed. The Commission concludes that this standard should be applied to assess the burdensomeness of the requirement on both the consumer and the company.

7. Granting a suspension to Kennebec of the requirements to provide local number portability, both intramodal and intermodal, imposed by 47 U.S.C. §251(b)(2), SDCL 49-31-81 and the rules and orders of the FCC is in the public interest.

8. Granting a suspension of Kennebec's intramodal and intermodal LNP obligations until December 31, 2005, is necessary to avoid a significant adverse economic impact on the users of Kennebec's telecommunications services generally.

9. Granting a suspension of Kennebec's intramodal and intermodal LNP obligations until December 31, 2005, is necessary to avoid imposing a requirement that is unduly economically burdensome on Kennebec.

10. The suspension granted herein does not relieve Kennebec of its obligation to properly route calls to numbers ported between other carriers, including wireless carriers.

It is therefore

ORDERED, that Kennebec's obligation to implement local number portability, both intramodal and intermodal, imposed by 47 U.S.C. §251(b)(2), SDCL 49-31-81 and the rules and orders of the FCC is hereby suspended pursuant to 47 U.S.C. § 251(f)(2), SDCL 49-31-80 and ARSD 20:10:32:39, until December 30, 2005; and it is further

ORDERED, that should Kennebec desire to continue the suspension following December 31, 2005, the company shall file its petition for suspension on or before October 1, 2005. As part of such filing, Kennebec shall include a schedule setting forth its planned upgrades to its switching system; and it is further

ORDERED, that the suspension granted herein does not relieve Kennebec of its obligation to properly route calls to numbers ported between other carriers, including wireless carriers.

#### NOTICE OF ENTRY OF ORDER

PLEASE TAKE NOTICE that this Order was duly entered on the 30th day of September, 2004. Pursuant to SDCL 1-26-32, this Order will take effect 10 days after the date of receipt or failure to accept delivery of the decision by the parties.

Dated at Pierre, South Dakota, this 30th day of September, 2004.

CERTIFICATE OF SERVICE	
The undersigned hereby certifies that this document has been served today upon all parties of record in this docket, as listed on the docket service list, by facsimile or by first class mail, in properly addressed envelopes, with charges prepaid thereon.
