

Here are a few additional questions pertaining to tariff revisions submitted to the South Dakota Public Utilities Commission in Docket TC12-121:

- 2-1) The FCC Release No. 11-161, Appendix A, Section 51.907(b)(2) requires demand be calculated and revenues (rates) reduced for each rate element. According to subsections iv and v, this can be accomplished by either 1) keeping intrastate access rate structure or 2) applying the interstate rate structure and assessing a transitional per-minute charge. Please provide tariff revisions and supporting work papers which comply with this part of the order.

**Response:** Attachment I contains the revised tariff pages and calculation sheet for Matrix Telecom, Inc. in the above mentioned Docket.

- 2-2) As these calculations will result in a lower composite rate than what has been charged since July 1, 2012, will a refund be issued to customers?

**Response:** Matrix will provide refunds to customer (carriers) in South Dakota for traffic from July 1, 2012 to January 16, 2013 based upon the newly filed rates. As can be seen from the test year calculations the company had very minimal usage for this service.

- 2-3) Please change the effective date to January 16, 2013. (the day after the Commission meeting)

**Response:** See Attachment I
