**Responses Due:** December 9, 2015

3-3. Where is the POI for terminating 9-1-1?

Answer:

In Figure 1, In order to terminate a 911 call, it must be routed through the MPLS network to the ultimate PSAP destination. These calls, from the perspective of terminating the call path, will originate at the “CSP End office”, traverse the NextGen MPLS network where appropriate location-based routing is determined, and will enter the SD Network (SDN) as the Point of Interface for terminating the 911 call to the appropriate PSAP.
