Where people gather, people connect.

Society is on the move today, and the demand for reliable, continuous wireless connectivity is moving with it. From major sporting events to transportation hubs, universities, retail centers and high-rise office buildings, people gather and connect—and expect to do so seamlessly and easily.

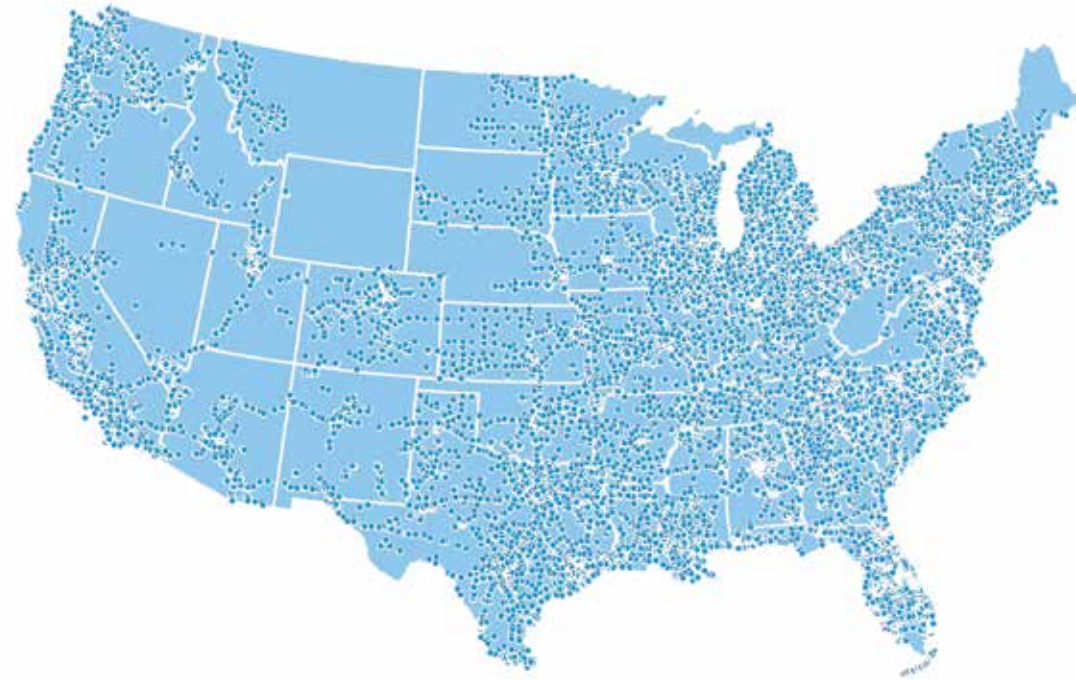

Mobilitie partners with telecommunications carriers to design and build high-capacity wireless networks in congested environments to provide comprehensive, robust and secure mobile coverage.

As the largest privately-held wireless infrastructure provider in the United States, Mobilitie specializes in funding, deploying and operating wireless solutions including indoor and outdoor neutral host Distributed Antenna Systems (DAS), Small Cells, and Wi-Fi networks, communication tower sites, as well as other infrastructure used by wireless carriers to enable high speed mobile communications.

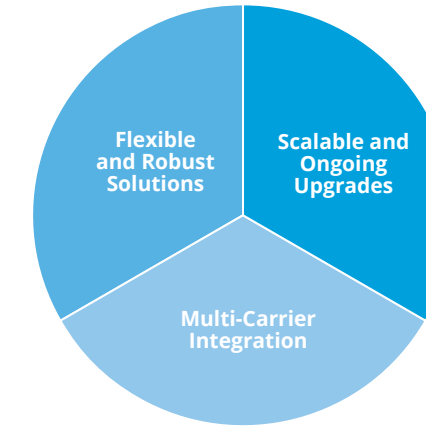

When people connect, great things happen. And where great things are happening, Mobilitie is making it possible with wireless solutions that people can depend on.

Mobilitie Is Driving More Site Selection And Wireless Deployment Than Any Other Providers Or Carriers Combined

Mobilitie Difference

Flexible and Robust Solutions

Mobilitie is focused on funding and developing new infrastructure. We design for the future, therefore, providing a true solution to both the venues and the carriers. Mobilitie designs, deploys, operates and maintains the right wireless solution.

Scalable and Ongoing Upgrades

Mobilitie monitors network activity 24/7, and works with the wireless carriers to increase capacity as required, and incorporate the latest wireless technologies into all of our wireless solutions.

Multi-Carrier Integration

Mobilitie has deep-seeded relationships with all of the carriers. Our dedicated carrier teams work hand in hand with the carriers to define priorities and provide integrated solutions to their networks.

We provide the funding
and services to accelerate
network deployment.

Every wireless
environment is unique.

MOBILITIE wireless network solutions
are designed to each specific venue's
mobile demands.

DAS

Indoor and outdoor neutral host Distributed Antenna Systems, designed to provide optimal coverage and capacity for all wireless carriers, at even the largest and most challenging venues

SMALL CELLS

Indoor and outdoor Small Cell networks, based on Femtocell, Picocell and Microcell technologies with combined radio heads, providing improved 4G LTE and Wi-Fi connectivity

COLOCATION MANAGEMENT

Comprehensive management of the entire colocation process, including site marketing, lease processing, installation supervision and ongoing lease administration

COMMUNICATION TOWERS

Multi-carrier communication towers and rooftop builds to enable improved wireless service for carriers, spanning their nationwide macro networks, based on our industry leading Lease-to-Suit® model

Wi-Fi

High-density Wi-Fi networks that not only provide seamless Internet access for all mobile devices, but also deliver a customized and rich platform of powerful customer communication tools such as location-based services, video broadcast and CRM applications

PROFESSIONAL SERVICES

Mobilitie's tier-1 team of industry experts assist wireless carriers and real estate owners in addressing their wireless service challenges, ensuring the right solutions are successfully deployed. We specialize in scalable solutions for complex deployments, built to accommodate exponentially increasing mobile data demands

Your Crowd Never Outgrows Your Coverage.

MOBILITIE DISTRIBUTED ANTENNA SYSTEMS (DAS) offer seamless wireless communications in difficult-to-cover areas.

Designed to anticipate the latest technologies deployed by wireless carriers today, Mobilitie's DAS infrastructure provides seamless and scalable support for high-bandwidth mobile applications.

Mobilitie's DAS networks are non-intrusive. We respect the architectural integrity of all venues and work with our clients to develop creative solutions to stealth and conceal all equipment.

ENHANCE WIRELESS CONNECTIVITY

WHILE KEEPING PACE WITH
THE LATEST TECHNOLOGIES

We've Built More Towers Than Any Other Provider In The Last Decade.

MOBILITIE funds the development of communication towers and rooftop builds, available to all wireless carriers to improve overall wireless service. We are recognized nationally as an industry leader for our innovative solutions to tower deployment.

Our Lease-to-Suit® model is unique in the industry. Unlike all other infrastructure firms, our innovative business model is focused on driving down expenses over time for our carrier partners.

Our Lease-to-Suit® model for new tower builds provides carriers with:

- Full capital funding of all development costs
- The lowest occupancy cost model in the industry
- Flexibility to modify and upgrade sites as desired in the future
- Various development options from full Mobilitie turnkey to fully carrier managed

MAXIMIZE SERVICE

EXPAND COVERAGE

Small Cell Wireless Networks That Keep A Low Profile.

IN ORDER TO MEET ever-increasing wireless demands, providers have to bring the networks closer to the users—indoors, outdoors, at home, in offices and enterprises, as well as on utility poles. Small Cell wireless networks offer an ideal solution for filling the voids in coverage or capacity of wireless carrier networks.

Small Cells require only limited infrastructure and are installable at discreet, out of the way locations; they do not require high power availability, HVAC equipment or dedicated space for headend equipment. In addition, our Small Cell solutions are designed to be upgradable to accommodate future wireless demand growths.

Mobilite is deeply experienced working with local governments and municipalities to install Small Cell equipment and networks in public, city-owned locations.

IDEAL SOLUTION

TO ACCOMMODATE
FUTURE GROWTH

Smarter Wi-Fi Solutions For Today's Connected Venue.

MOBILITIE Wi-Fi networks offer more than merely a gateway to the Internet. Enabling venues to interact and communicate directly with their customers, our advanced wireless technology platform includes tools for location-based services, advertising and promotions, video broadcast and other sophisticated CRM applications and analytics.

Our Wi-Fi solutions satisfy the growing demand for flexible, high-speed and reliable wireless connectivity, while providing you with the communications paths you need to build revenue and win markets. In addition, our platforms help offload data from traditional cellular networks, creating more overall capacity while enhancing your guests' wireless communications experiences.

INTERACT WITH YOUR FANS

ON A RELIABLE
HIGH-CAPACITY NETWORK

Colocation Management Designed To Leverage Your Assets.

LET MOBILITIE MANAGE all aspects of colocation to maximize the value of your wireless infrastructure assets such as, communication towers, rooftops, and other indoor and outdoor wireless network locations. Our colocation management team can manage the entire colocation process, including site marketing, lease processing, installation supervision, and ongoing lease administration.

Mobilitie provides the management services you need to generate significant financial benefits from your colocation initiatives, free from the burdens of operational limitations or hidden costs.

BENEFITS TO SITE OWNERS

NO HIDDEN COSTS

We Help Carriers And Venues Improve Mobile Access.

WIRELESS CARRIERS

- Capital funding and network occupancy cost reduction
- Roaming expense reduction
- Backhaul strategy and savings
- Deployment PMO and schedule acceleration
- Access to public infrastructure locations nationally
- Inbound colocation management
- Ground lease optimization

VENUE AND REAL ESTATE OWNERS

- Optimal network design and configuration
- Neutral host systems that incorporate all wireless carriers
- Network upgrades and capacity planning
- Single point of contact for all wireless carriers

OPTIMIZE

REDUCE COSTS

Mobilitie's industry knowledge and expertise will **deliver the connectivity your customers demand.**

Mobilitie Has You Covered.

STAYING CONNECTED is a continuous process. At Mobilitie, we look ahead to the technology requirements of tomorrow's mobile experience, building scalable networks that anticipate future mobile demand.

Make Yours An Event To Remember.

FANS CONNECT. Fans share experiences. Fans transform events into history.

The huge crowds that flock to large venues pose an enormous challenge to consistent and reliable wireless connectivity. At indoor and outdoor stadiums, arenas, amphitheaters and other entertainment venues, your guests expect to be able to share powerful moments as they happen with friends and family. Dead zones can be frustrating to an otherwise great event.

Mobilitie makes sure fans can connect and share experiences. Providing a one stop shop for equipping sports and entertainment venues with state-of-the-art wireless infrastructure, Mobilitie delivers cellular and Wi-Fi service solutions that are designed from the ground up for scalability in high-density crowd environments.

Professional sports teams such as the Kansas City Chiefs, Washington Wizards, Columbus Blue Jackets, Tampa Bay Rays and Chicago Fire, have placed their trust in Mobilitie for record-breaking wireless coverage and data connectivity that assures an optimum experience for guests and employees alike.

ENHANCING THE
WIRELESS EXPERIENCE

BY KEEPING FANS CONNECTED

Build Tenant Satisfaction With Connections That Last.

STRONG WIRELESS CONNECTIVITY is an expected utility for tenants in professional office spaces and retail outlets. Mobilitie works with property owners and management companies to provide discreet, customized distributed wireless technology and networks including: Distributed Antenna Systems (DAS), Small Cells, Wi-Fi, and rooftop installations.

High-Rise Office Buildings

Property owners need to ensure their tenants have uninterrupted and reliable wireless connectivity at all times. Strong wireless connectivity improves the marketability of your property, as well as increases occupancy and tenant satisfaction. With a Mobilitie solution, owners and tenants can be sure that a call originating from the 100th floor will be just as clear and reliable as a call originating from the lobby.

Retail Spaces

Providing the best overall experience is critical in maintaining your customers' loyalty. With the mobile retail movement changing how retail owners reach and convert customers at the point of purchase, having a robust and reliable wireless network is critical. Mobilitie's non-intrusive and concealed wireless solutions offer reliable connectivity to tenants and shoppers alike.

NON-INTRUSIVE
& CONCEALED

CUSTOMIZED
WIRELESS SOLUTIONS

With Five Star Wireless Service.

A GOOD WIRELESS connection is just as important as a clean room. Hotel guests expect to stay connected, both in the lobby and in their rooms. In fact, today's average traveler ranks wireless connectivity as more important than TV, room service, or other traditional hospitality services when judging the quality of their hotel or resort experience. Hotel owners and property managers must provide a robust wireless network enabling guests to use their mobile devices to conduct business, make phone calls to stay in touch with family and friends while traveling, stream movies, as well as post to social media.

Mobilitie builds the wireless networks that ensure guests have seamless Internet access and strong cellular reception. We've proven our strength in the hospitality sector by implementing solutions in many of the world's finest resorts, vacation destinations, and Michelin-rated hotels—including some of the most well-known resort properties in Las Vegas, the nation's hotel capital. Regardless of the property size or layout, our unobtrusive, tailor-fit wireless network designs incorporate Distributed Antenna Systems (DAS), Small Cells, Wi-Fi networks, and communication towers to support robust wireless coverage throughout your property.

RELIABLE WIRELESS
SERVICE LEADS TO

GREATER
CUSTOMER LOYALTY

Connecting Patients With Care.

IN LIFE'S CRITICAL moments, we expect to be reached. Wireless coverage is essential in hospital environments.

As with other industries, healthcare facilities can now differentiate themselves by providing a service that patients and visitors rely on: wireless access to voice and data services.

Additionally, healthcare employees are increasingly relying on wireless coverage for access to information. A robust wireless connection can help create efficiencies for healthcare providers.

Mobilitie understands the complex nature of hospital environments. We fund, install, and operate seamless wireless solutions without disrupting day-to-day operations. Mobilitie's Distributed Antenna Systems (DAS), Small Cells, Wi-Fi networks, and communication towers provide strong reliable wireless connectivity throughout your hospital's campus—even in traditional dead zones like stairwells, basements, labs, and parking garages.

WIRELESS SOLUTIONS

THAT IMPROVE DOCTOR
AND PATIENT SATISFACTION

Enriching Minds. Broadening Horizons.

WALK AROUND A COLLEGE CAMPUS, and you'll notice students chatting on phones, posting to social media, and texting one another. Of course, they also use their wireless connections to access class information and conduct research.

College students have never known a time without mobile phones, and find new ways to use and incorporate wireless communications in their daily routines. They are the ones most likely to notice dead zones and slow networks. College campuses have to provide coverage for many types of facilities: dorms, classrooms, athletic facilities, outdoor commons, and parking structures. Campuses require complex solutions to ensure that wireless coverage continues campus-wide, during daily routines and in emergencies.

With Mobilitie, students, faculty, and guests all receive solid and reliable connectivity for their campus activities. Mobilitie's wireless solutions feature today's most advanced integrated indoor and outdoor networks, including Distributed Antenna Systems (DAS), Small Cells, Wi-Fi networks, and communication towers.

SOLID AND RELIABLE

CONNECTIVITY
ON CAMPUS

Ensure Reliable Wireless Connectivity For Commuters On The Go.

AS COMMUTERS INCREASINGLY rely on their mobile devices, mass transit and government entities must provide access to robust wireless connectivity, both above and below ground.

Mass transit and public safety infrastructure are often complicated arrangements of next-generation technology and aging, legacy systems designed for the needs of earlier eras. Today, these public spaces are rapidly being redefined to support tighter security, more sophisticated communications between emergency responders and law enforcement, and more reliable mobile service coverage for passengers.

Mobilitie's wireless solutions leverage Distributed Antenna Systems (DAS), Small Cells, Wi-Fi networks, and communication towers to deliver quality wireless coverage to high-traffic or hard-to-reach public areas, such as mass transit or underground locations.
