

**A different kind  
of internet.**

**A different kind  
of internet provider.**

**bluepeak®**

## About us

### *Hi, we're Bluepeak.*

We're an internet company that's unlike most internet companies. We exist for the places that other big city internet companies tend to ignore. It's our job to help to find **new and better ways to help you power your passions**, no matter where you live.

We believe that the size of the city shouldn't determine the quality of the technology it has access to. **That's why we built Bluepeak for you.** We provide faster, more reliable internet without all the things that get in the way of great service—like hidden fees, and slow response times.

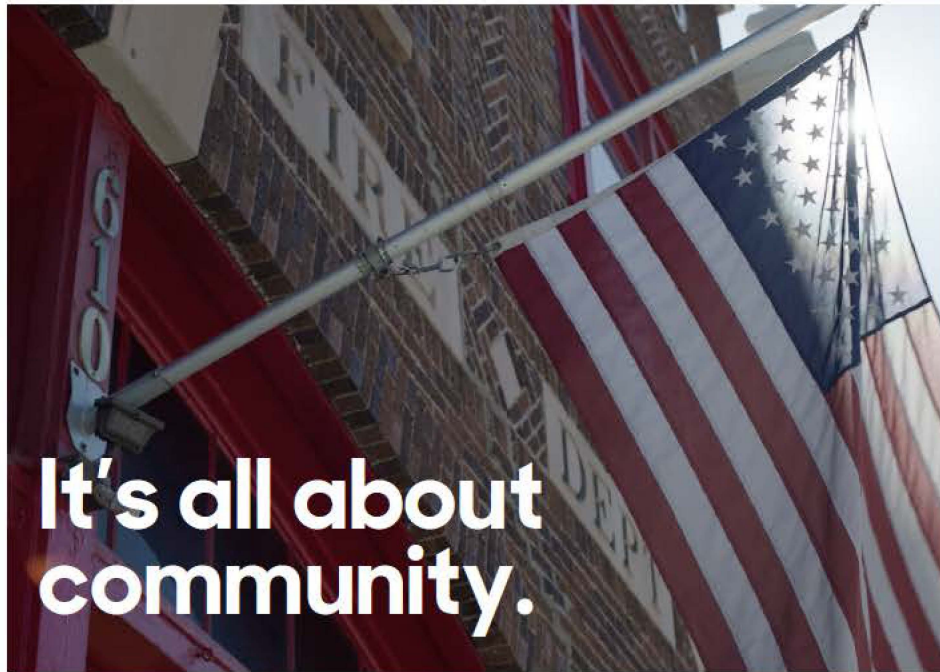

## Access to technology— that's why we're here.

We love the pace of life in the towns we serve. But when it comes to internet service, we know speed is everything. We offer a variety of packages so you know you can find just the right one for your lifestyle.

With fiber optic cable, we provide internet at the speed of light for both Residential and Commercial customers, **Bluepeak is a whole new ballgame.** You're able to choose from unbundled services to get a monthly price that won't carry hidden fees, data caps or contracts. From internet to TV, to powering every device in your home, **we're providing the best fiber connections in your community.**

It's all about  
community.

In our modern world, the internet has become the great equalizer. A strong connection is crucial to access the tools and knowledge that educate communities and provide opportunity. Digital literacy matters more than it ever has, **and at Bluepeak, we take our role as a provider seriously.**

As a communications company, we're committed to connecting people and creating access and opportunity where there wasn't any before. By investing in the infrastructure needed to provide fiber internet, providing resources and information, and encouraging people's potential, **we aim to increase equity in the communities we serve.**

---

*We are planning now for a fiber-driven future where your community will benefit and thrive.*

## Bluepeak as a neighbor.

**We always strive to be a good neighbor.** We're bridging public and private spaces to provide the greatest amount of internet access to the greatest amount of people. We want people to have the means and know-how to effectively connect to the internet, and through it, to the things that matter most to them. **Our employees volunteer in your community because it is their community as well.** From street fairs to partnering with local non-profits, we want to make the community a better place to live.

---

*At Bluepeak, we invest in the infrastructure of not only your internet, but our shared communities.*

The future  
is fiber.

Between working from home, gaming, virtual health care, online learning, and zoom calls, the average American home now averages up to 22 connected devices.\* **It's never been more important to have solid, stable internet.**

*Fiber is uniquely suited to handle the internet needs of the bandwidth-hungry future.*

# So, what's the big deal about fiber?

**Fiber-optic is a fundamentally better technology.**

**Bluepeak fiber is some of the fastest internet you can get.** It works by transmitting data over fiber-optic cable with light beams, delivering a rock solid, speedy connection.

**Equal download speeds and upload speeds.**

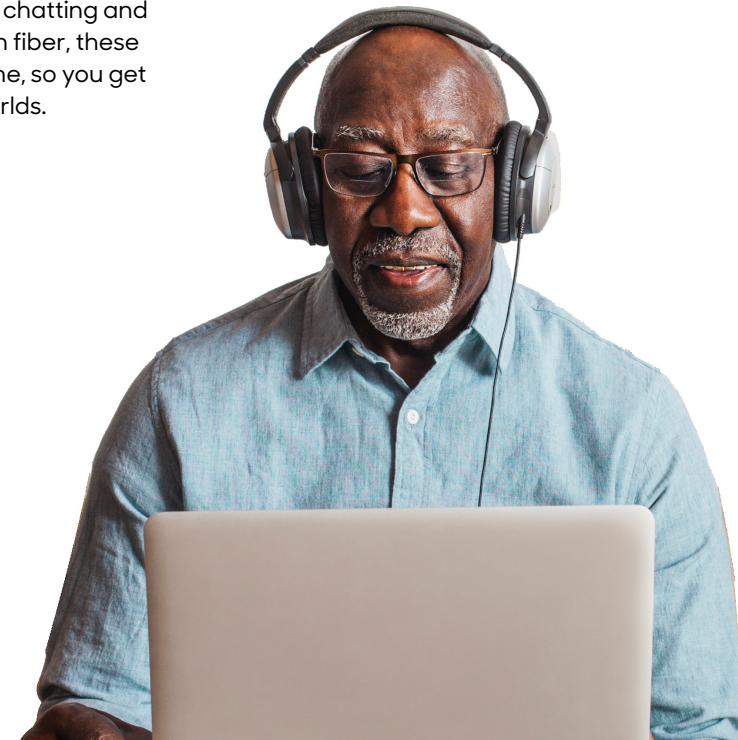

With traditional connections, these two speeds aren't always equal, yet both are key components of a great internet experience. For example, **high download speeds help for things like streaming videos and downloading large files**, while high upload speeds are important for things like video chatting and online gaming. With fiber, these speeds are the same, so you get the best of both worlds.

**Rocket Fast**

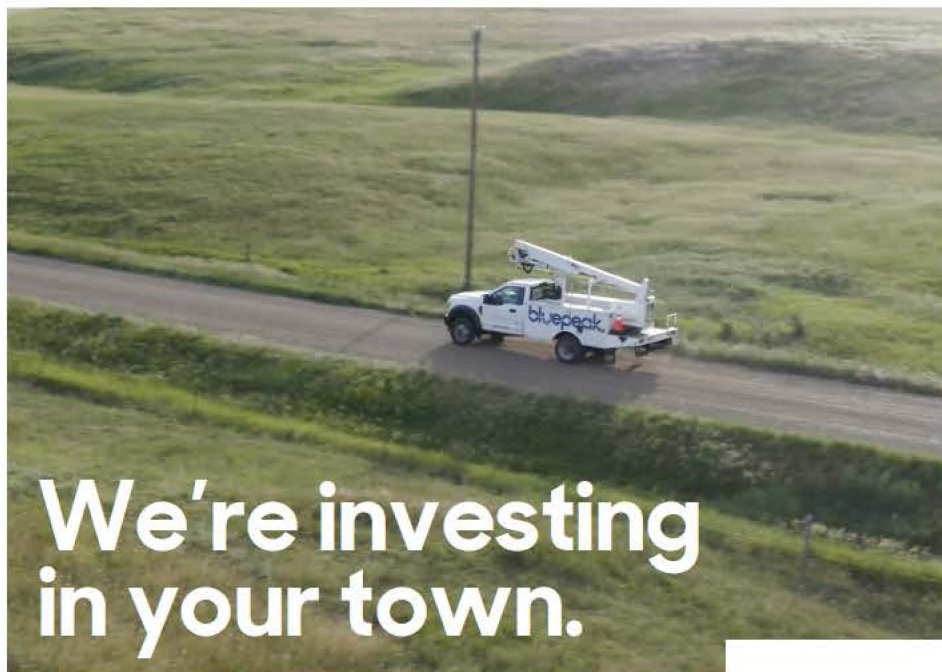

Fiber is fast— **124,188** miles per second fast. Information moves across fiber at about **70% the speed of light**, so whether you're sending an email or downloading a movie, it's taking less time than on any other type of network.

**Rock Steady.**

**Fiber is more reliable** because it is more resistant to the impacts of weather and less susceptible to interference from other forms of communication such as radio and TV stations. Fiber networks need less equipment to operate, therefore less equipment to fail and cause an outage.

The wait for Fiber Internet is almost over. We are breaking ground to install a **faster, more reliable** fiber network for you and your neighbors.

Technology is evolving at lightning speed and requires an internet source that meets the demand of a bandwidth-hungry world. **Fiber is the future of internet.** Not only will fiber future-proof your personal internet experience, it will bolster your entire community.

---

*We're new to your town, but  
we're not new to towns like yours.*

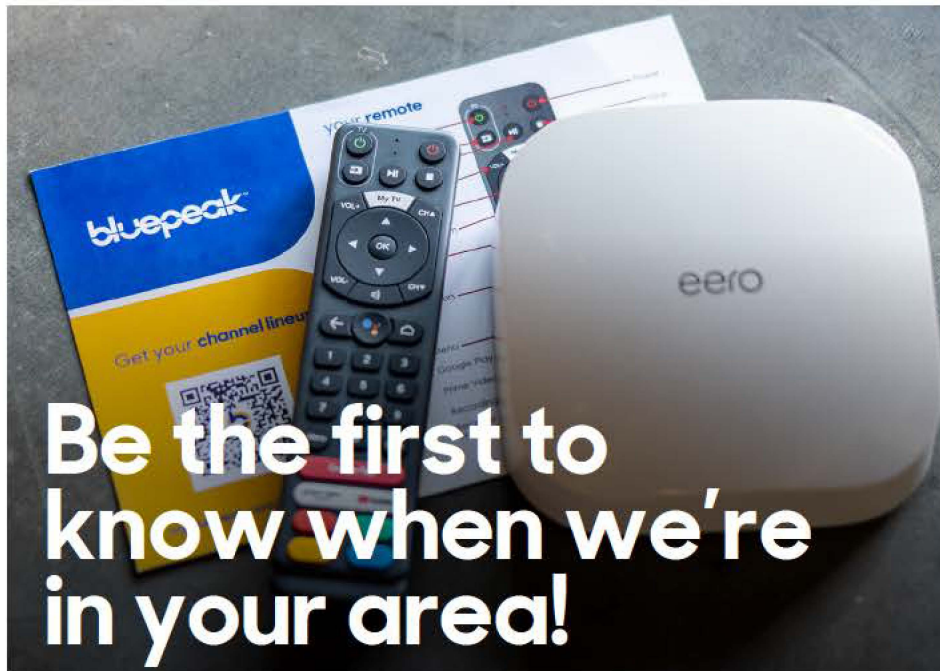

## What to expect.

You may see flags and spray paint along roads and sidewalks in your community to mark underground utilities. This process helps ensure that our crews can work safely and avoid service interruption.

Construction teams will work in public easements on or near your property to set Fiber Internet access points known as "**pedestals**" above or below ground. Our construction team will be exposing existing underground utilities around the location markings to know exactly where they are located.

Construction crews will place the conduit and pull fiber lines through them. The construction timeline varies, and we anticipate this phase to last one or two months. After the construction occurs, we will take and seed any disturbed property.

Be the first to  
know when we're  
in your area!

To stay on top of approvals, construction in your city, and scheduling, sign up for regular updates by following the QR code to **get on the list**.

Then you'll be the first to know when we will be in your area, and first to know when you can sign up for Bluepeak service! Once we're up and running, you will be able to **experience 100% fiber fast internet**.

---

*We're excited to be a part of your community, and proud to serve you.*

Get on the list today!
